Contains a review of studies on the use of lichens (including common arctic forms) as sources of medicines, vitamins and especially antibiotics. Medicinal use of lichens is traced back to 2000 B. C., the last 20 years receiving the closest attention. Antibiotic studies of lichens since 1944 are reviewed in detail, with the botanical, chemical and bacteriocidal properties of numerous lichens or principles isolated from them discussed.

Contains a study on the effect of temperature upon the velocity of cell division in young ovular tissues of *Paris tetraphylla*, X-rayed at 80 r and kept at 20°, 10° and 0° C. after irradiation.

Copy seen: DLC.

35757. KURABAYASHI, MASATAKA. Senshokutai no taishoku hannō ni oyobosu ondo no eikyō. (Teion kagaku [Low temperature science], Tokyo, 1948. v. 4, p. 97-103, 9 fig., 2 tables) 8 refs. Text in Japanese. Summary in English. **Title tr.:** Effect of temperature upon the differential reaction of chromosomes.

Contains a description of a differential reaction observed at low temperature in the short arm of chromosome C. of *Paris tetraphylla*. The reaction consists in under-charging with nucleic acid and disappears after transfer to moderate temperature.

Copy seen: DLC.

35758. KURABAYASHI, MASATAKA. X-sen no senshokutai hen-i yūki sayō ni taisuru ondo no eikyō. (Teion kagaku [Low temperature science], Tokyo, 1951. v. 7, p. 139-47, 4 graphs, 8 fig. on 2 plates, table) 7 refs. Text in Japanese.

Summary in English. **Title tr.:** Effect of temperature upon the induction of chromosome aberration due to X-ray irradiation.

Young ovular tissue of *Paris tetraphylla* was X-rayed and subsequently kept at 20°, 10° and 0°C. It was found that the frequency of chromosomal aberrations due to irradiation is higher in the material kept at low temperature.

Contains description of a method of permitting controlled superficial destruction of the skin. It has been of value in treatment of certain hyperkeratotic and acanthotic dermatoses.

Copy seen: DSG.

35761. KURTZ, VINCENT E., and D. B. WALES. Geology of the Thule area, Greenland. (Oklahoma Academy of Science. Proceedings, 1950, pub. 1951. v. 31, p. 83-89, text map) 3 refs.

Contains results of observations made by the authors during a ten-day period in summer 1949. From oldest to youngest, the rock units are: Apat formation (early Algonkian?), Wolstenholme quartzite, Danish Village formation, and

Narsarsuk formation, the last three considered possibly late Algonkian in age. All formations are intruded by diabase dikes and sills. Boulderly moraines have been left in the southwest part of the area by retreat of the margin of the Greenland icecap. Structural geology and geomorphic features are briefly described, with notes on forms caused by frost action.

Swedish. Summary in English. **Title tr.:** On the geomorphology of the Kilpisjärvi area in Enontekis Lapland.

The sedimentary bedrock around Lake Kilpisjärvi (69° N. 20°45' E.) has been eroded to form mountains and "fields" of medium height. Relief differs from that of the Archean peneplane. Present valley forms are the result of glacial erosion, but general levelling action of the continental ice sheet during the Pleistocene was not great; Tertiary forms are on the whole preserved. The ice sheet stagnated in this region, leaving characteristics glacial and glacio-fluvial deposits. Very active postglacial frost action combined with denudation has provided a type of "field" characteristic of arctic landscapes.

35787. LANEUVILLE, JEAN. Disintegrability of iron ores from New Quebec compared with standard ores. Quebec, 1952. 20 p. 2 graphs, 8 tables. Mimeographed. (Quebec, Province. Dept. of Mines. Laboratories Branch. Preliminary report, no. 276) 9 refs.

Seven samples of limonitic hematite from the northern Quebec-Labrador deposits were compared with a magnetite from Kiruna, Sweden, and with six hematite samples from other parts of the world. Samples were shaken over a series of superimposed sieves, and after ten hours the average diameter of the particles and extent of disintegration were determined. Disintegrability of the Quebec ores is directly proportional to their porosity. This is not true for the other ores. Methods are described and tables show chemical composition of the ores and the results of the sieve analyses.

Copy seen: DGS.

35788. LANEUVILLE, JEAN. Sintering and melting points of iron ores from New Quebec. Quebec, 1952. 10 p. illus., 2

tables. Mimeographed. (Quebec, Province. Dept. of Mines. Laboratories Branch. Preliminary report, no. 265) 8 refs.

Contains general discussion of sintering and melting points, with tables showing comparison of 12 ores as to chemical composition, sintering and melting points, and variation of sintering and melting temperatures with chemical composition and porosity. Ores from Ruth Lake and Burnt Creek in northern Quebec-Labrador and from Kiruna, Sweden, are included with samples from Minnesota, Ontario, etc.

From notes left by Langans, a state councillor, a general description of the Yakuts and their culture, has been assembled by G. I. Spasskiĭ. An historical sketch is given of their origin and dissemination, clans and more famous chieftains, and their conquest by the Russians. The Yakut physical appearance is described, their endurance, mental characteristics, dwellings and household, food and beverages, lack of cleanliness, clothing and adornments. Sketches are

given of their wedding customs, child-birth and infant care, diseases and burial. The Yakut economy and mode of life is characterized as that of nomadic animal breeders and hunters; occasionally they do fishing and they are good blacksmiths. Details are given on their time reckoning, kumiss festivals (for men only), women's songs and dances, religious beliefs, shamanism, sacrifices, and the taking of an oath. **Copy seen:** DLC.

35791. LANGE, MORTEN, and A. H. SMITH. The *Coprinus ephemerus* group. (Mycologia, 1953. v. 45, no. 5, p. 747-80) 19 refs.

Contains a critical revision of the *Coprinus ephemerus* group of black-spored agarics, with a survey of diagnostic characters, taxonomic notes, a key to the species and a systematic list of 23. Latin diagnoses of seven new species are given, with descriptions, critical notes and data on habit, habitat and distribution. *C. boudierii* and *C. bisporus*, native to Greenland, are included. **Copy seen:** MH-F.

35792. LANGKAVEL, B. Hunde und Naturvölker. (Internationales Archiv für Ethnographie, 1895. Bd. 8, p. 109-117, 138-49) about 150 refs. Text in German. **Title tr.:** Dogs and primitive peoples.

Essay upon the possible homeland of the domesticated dog, its importance to man, use of dogs for food and sacrifices, in hunting, and as a draft animal. Includes notes on dog sledge transportation in the Obdorsk, Yeniseysk and Kolyma regions, the dogs of the Kamchadals, Chukchis, Tungus, Gilyaks, and American Eskimos (p. 113-16).

A map, 1:100,000, of the island (74°35' N. 79°30' E.) as sketched by the observer on the *Komseverpul' No. 3*, during flights on July 29 and Aug. 8, 1931; its submerged coastline is indicated, with conjecture on depth of shoals, and remarks upon its formation: silt deposits from the Ob' and Yenisey. **Copy seen:** DLC.

35798. LAPPO, S. D. Plavaniā Vasilīa Mikhailovicha Golovnina. Moskva, Izd-vo "Pravda," 1950. 23 p. port. (Vsesoiūznoe obshchestvo po rasprostraneniū politicheskikh i nauchnykh znaniū) Text in Russian. **Title tr.:** The voyages of Vasilīi Mikhailovich Golovnin.

Brief account of main achievements of this Russian navigator are presented in a public lecture delivered in Moscow, in the Central Hall of the All-Union Society for Dissemination of Political and Scientific Knowledge. His voyage from Kronshadt to Kamchatka on the *Diana* in 1807-1809, his trips to Alaska in 1810, and the Kuril Islands in 1811 and captivity in Japan, and his round-the-world voyage on the *Kamchatka* in 1817-1819 are recounted, extolling his courage as a soldier, ability as a scientist and perfection as a writer. **Copy seen:** DLC.

35799. LAPTEV, S. N. Shvedsko-norvezhskie ēkspeditsii 1876 i 1878 g. g. v Sibir'; k materialam po istorii zemlevedeniā Sibiri. (Vsesoiūznoe geograficheskoe obshchestvo. Vostochno-Sibirskii otdel. Izvestiā, 1926. t. 49, vyp. 2, p. 1-22, fold. facsim.) 8 refs. Text in Russian. **Title tr.:** The Swedish-Norwegian expeditions of 1876 and 1878 in Siberia; contribution to the history of the geography of Siberia.

Contains data from two dossiers of documents, formerly in the archives of the Governor-General of Eastern Siberia, now in the East Siberian Regional Archives; they are entitled: (1) "Swedish-Norwegian expedition to the mouth of Yenisey" (52 leaves, 1876-1877), and (2) "To the support of the scientific expedition of Lt. Bruin and Prof. Nordenskiöld to the Arctic Ocean, also reward to the Chukchi Menko for his

services to this expedition" (111 leaves, 1878-1885). Reports, telegrams, official correspondence, two letters by Nordenskiöld, etc. are included in the collection. **Copy seen:** DGS.

35800. LARIN, IVAN, and S. SIZYKH. Materialy k izucheniū narodno-meditsinskikh rastenii Irkutskoi gubernii. (Vsesoiūznoe geograficheskoe obshchestvo. Vostochno-Sibirskii otdel. Izvestiā, 1916, pub. 1917. t. 45, p. 232-40) Text in Russian. **Title tr.:** Popular medicinal plants of the Government of Irkutsk.

Contains a list of 106 plants, all but 18 in current use for treatment of various (46) diseases. The material was collected by Larin and others in the districts of Verkholensk and Irkutsk in 1904-1915. **Copy seen:** DLC.

35801. LARMOUR, W. T. The Canadian North. Ottawa, Queen's Printer, Dec. 15, 1952. 31 p. text map. (Current affairs for the Canadian Foree. v. 3, no. 12) 6 refs. **Also pub.** in French as: *Le Nord du Canada* (Actualités, Dec. 15, 1952. v. 3, no. 12)

Contains short general summary of history in the 17th to 19th centuries, physical geography, administration and government, natural resources (mineral resources, furs, game, fish, forests, agriculture, water power, reindeer, bison), Eskimo handicrafts, transportation, yearly Arctic Patrol, communications, population, education, health, law, and scientific research. **Copy seen:** DLC.

35802. LARMOUR, W. T. "Symbol of sovereignty." (Canadian geographical journal, Aug. 1954. v. 49, no. 2, p. 82-86, 6 illus.)

Contains brief popular description of scenery near Mount Royal George V at Arctic Bay, northern Baffin Island (73°10' N. 85°10' W.), where a cairn was built by J. E. Bernier in 1911 after wintering there in the C. G. S. *Arctic*.

Contains a survey of hunters' use of dogs for both short and long distance trips, chiefly among the Zyryans on the lower Pechora, with references also to similar practices of Voguls and Ostyaks. Hitching technique, forms of harness, and types of sledges are described. Based on writer's field work in 1951-1952, and on literature.

Copy seen: DLC.

35806. LATKIN, NIKOLAI VASIL'-EVICH, 1833-1904. Der Obi und sein Flussgebiet. (Globus, 1876. Bd. 29, p. 254-55) Text in German. **Title tr.:** The Ob' and its basin.

Contains description of Ob' and its tributaries, navigation and ice conditions, profits from fishing, town and villages along the river, trade and economic resources of the region.

Copy seen: DLC.

35807. LATKIN, NIKOLAI VASIL'-EVICH, 1833-1904. Turukhanskii krai. (In: Zhivopisnaja Rossiia, ed. by P. P. Semenov, 1895. t. 12, pt. 1, p. 85-98, 7 illus.) Text in Russian. **Title tr.:** The Turukhansk District.

Contains a short description of the geography, rivers and climate of this district, part of the present Krasnoyarskiy Krai, north of the Podkamennaya Tunguska; its history; the coming of Russians; occupation and mode of life of the natives and their exploitation by merchants.

The region is inhabited by Yuraks, Samoyeds, Dolgans, Yakuts, Ostyaks, and Tungus. Their character, tribal and family organization, customs and economy are sketched. **Copy seen:** DLC.

35808. LATKIN, VASILII NIKOLAEVICH, 1809-1869. Zamietki o samoedakh; iz dorozhnago dnevnika. (U.S.S.R. Ministerstvo vnutrennikh del. Zhurnal. 1844. chast' 7, p. 3-36) Text in Russian. **Title tr.:** Notes on Samoyeds; from a traveler's diary.

Contains a sketch of Samoyeds: seven clans in the Mezen' and Pechora region. The localities where they live, their relations historically with the Russians, paying of taxes, religion and shamanism, marriage, burial, taking an oath, reindeer breeding, hunting and fishing, etc., are described. Christianization of the Samoyeds and their exploitation by Izemtsy (Zyryans) are discussed. A geographic sketch is given of the Bol'shezemel'skaya, Timanskaya and Kaninskaya Tundras. The author traveled in the Pechora region for commercial purposes in 1840 and 1843, and met with M. A. Castrén on his field work. An extensive German abstract, "Einige Nachrichten über die Samoeden" was pub. in *Archiv für wissenschaftliche Kunde von Russland*, 1844, Bd. 4, p. 593-607 (copy in DLC).

Copy seen: DLC.

35809. LAUGHLIN, WILLIAM SCEVA, 1919-, and **G. H. MARSH.** The lamellar flake manufacturing site on Anangula Island in the Aleutians. (American antiquity, July 1954. v. 20, no. 1, p. 27-39, fig. 8-14, incl. 2 maps) 14 refs.

Contains account of examination in summer 1952, of a lamellar flake factory site on Anangula Island northwest of Umnak in the Aleutians. Earlier work on the site is noted, the island and vicinity of the factory described. In addition to the factory and its products, similar flakes from the nearby village Chaluka, etc. are discussed. "It is inferred that the lamellar flaking technique was known and used in this area of the eastern Aleutians during the first three-fifths of human occupation and was subsequently given up about 1500-1600 years ago."

Copy seen: DSI.

35810. LAUGHLIN, WILLIAM SCEVA, 1919-, and others. Supplementary note on the Aleutian core and blade industry. (American antiquity, July 1952. v. 18, no. 1, p. 69-70, 2 illus.) Other authors: G. H. Marsh and J. W. Leach.

Contains supplement and correction to a former paper by the senior author (*Arctic Bibliography*, No. 23686) on analysis of artifacts from Chaluka, old village site at Nikolski, Umnak Island. Lamellar flakes, without prepared cores, were found primarily in the lower levels (below three meters) of the site, indicating use by the earliest Aleut culture; few flakes were found in upper levels.

Contains information on the area and boundaries of the Yukon Territory; estimates on arable land; climate as limiting factor; physical features as limitation to agriculture; soils, and the effect on them of climate, parent material, and relief.

Copy seen: DLC.

35824. LEAHEY, ALFRED. A preliminary soil survey of lands adjacent to the Mackenzie Highway in the Northwest Territories. Ottawa, Dept. of Agriculture, Experimental Farms Service, Jan. 1953. 23 p. 2 maps (1 fold.), 2 tables. Mimeographed.

Contains results of inspection made July 10-23, 1952, by a three-man party (including the writer) along the west side of Hay River, from the Alberta-N.W.T. border at 60° N. 116°58' W. to the mouth of the river at Great Slave Lake (60°51' N. 115°46' W.), a highway distance of 80.6 miles. Purpose of the survey was to locate and describe the nature of potentially arable soils. Major attention was given to (1) recent alluvium, (2) mineral and thin peat soils on silty clay alluvium, (3) thin peat over sand, and (4) soils of the lacustrine plain. First part of the report describes the physical geography and soils of the region. The second part presents profile descriptions of many of the soils, the results of chemical analyses, and data on climate and soil temperatures.

Copy seen: CaOGB.

35825. LEBEDEV, D. M. Plavanie A. I. Chirikova na paketbote "Sv. Pavel" k poberezh'iam Ameriki; s prilozheniem sudovogo zhurnala 1741 g. [Otv. red. akademik A. A. Grigor'ev] Moskva, Izd-vo Akademii nauk SSSR, 1951. 429 p. illus., tables, maps (part fold.), facsim. 110 refs. Text in Russian. **Title tr.:** Voyage of A. I. Chirikov on the vessel *Sv. Pavel* to the coasts of America; with the log book of 1741 in supplement [Academician A. A. Grigor'ev, editor]. Previously listed as *Arctic Bibliography*, No. 30366.

Monographic account of Chirikov's voyages in 1741 and 1742 on the *Sv. Pavel*, based chiefly on detailed study of the log books of both years and his

reports, also on other unpublished and published materials. No attempt is made to evaluate Chirikov's part in the Great Northern Expedition, or his significance as a scientist. The log book of 1741 is described and appraised (p. 3-14); Chirikov's early life and the first phase of the Great Northern (here called the Siberian-Pacific) Expedition, are sketched (p. 15-28); the voyage under Bering from Okhotsk to Kamchatka, thence on the *Sv. Gavril* northward through the strait between Asia and America, sighting St. Lawrence Island and the Diomedes, but not the Alaskan coast, 1728 and 1729, the return to Petersburg and preparation of the second part of the expedition. The voyage in 1741 is described in detail (p. 29-95); the 75-man crew and expedition members on the *Sv. Pavel*; discussion of the route by a conference of the officers and scientists; departure from Avachinskaya Bay on June 4, 1741 of the *Sv. Petr* under Bering and the *Sv. Pavel* under Chirikov; separation of the ships on June 20; coasts of America seen from the *Sv. Pavel* on July 15 (probably in the vicinity of Baker and Noyes Islands, 55°11' N. 137°57' W.); loss of 15 men and two boats in attempts at landing, July 18-26, probably in Takanis Bay of Yacobi Island; sailing northward along the Alaskan coast and westward skirting the Aleutian Islands, thought to be promontories of a great land mass; encounter with Aleuts on Sept. 9; hardships of the voyage due to shortage of provisions and water, and outbreak of scurvy; arrival at Petropavlovsk on Oct. 10, with only 51 men surviving. Brief description of the voyage (May 23-July 1, 1742 to the eastern Aleutians, discovering Attu) is given (p. 96-103) and (p. 104-109) conclusion of the expedition: trip from Kamchatka to Okhotsk by sea, thence overland to Yakutsk in 1742, Chirikov's dismissal in 1745, and return to Petersburg in 1746. A navigational analysis of the voyage of 1741 is given (p. 113-26) by G. K. Shumelko, who reconciles the 18th century with present-day data to correct the determinations of position in the *Sv. Pavel's* log, and adds (p. 128-33) a brief glossary.

The text of the log book of 1741, (p. 134-363) is printed for the first time from the copy preserved in the Academy of Sciences (original is not yet found), with later remarks added in parentheses. The log covers the period May 22-Oct. 12, 1741, giving daily data on the progress

of the voyage, vessel's position, weather, as well as notes on events: the first sighting of the North American coast, (p. 208-209), loss of the two boats and men, (p. 215-35), encounter with the Aleuts, their boats, clothing, appearance and behavior, attitude in barter (p. 306-314). Tabular data for determination of the *Sv. Pavel's* position in June 6-Oct. 9, 1741 (p. 366-429), references in footnotes, numerous text and folded maps showing routes, are included. The log of Bering's vessel, the *Sv. Petr*, was published in 1922 by F. A. Golder, q. v.

35831. LE CONTE, RENÉ. La bassin du Mackenzie. (Société des Américanistes de Paris. Journal, 1920. nouv. sér. t. 12, p. 270-76). **Title tr.:** The basin of the Mackenzie.

Contains hydrographic description of the region: Athabaska and Peace Rivers, Lake Athabaska, Great Slave River and Lake, the Mackenzie proper and its delta. Length of rivers, area of lakes, etc. are given. **Copy seen:** DSI.

35832. LÉDEN, CHRISTIAN, 1882- . Bei den Kap-York-Eskimo; aus dem Tagebuch eines Forschungsreisenden. (Koralle, Nov. 1928. Jahrg. 4, Heft 8, p. 385-89, 8 illus.) Text in German. *Title tr.*: Among the Eskimos of Cape York; from the diary of an explorer.

Contains an account of a summer trip in 1909 along the northwest coast of Greenland with Knud Rasmussen and Dr. Steensby. Several Eskimos from Cape York and North Star Bay were taken aboard for anthropological study; among them was a 78 year-old shaman, Masaitiak, a great singer and dancer, also a bold hunter; a case of native justice is reported in which the shaman acted as executioner. The eight photographs include seven by Dr. Th. N. Krabbe. *Copy seen:* DLC.

35833. LÉDEN, CHRISTIAN, 1882- . Kurzer Bericht über meine Grönlandreise 1909. (Globus, Apr. 1910. Bd. 97, no. 13, p. 197-202, 8 illus.) Text in German. *Title tr.*: Brief report on my Greenland journey in 1909.

Contains an account of a trip to West and North Greenland in June-Aug. 1909 to study Eskimo music and songs. The writer, accompanied by a native interpreter, found at Umatsiak a genuine Eskimo culture and old songs as yet unaffected, he states, by the destructive effects of missionaries' and other white men's civilizing activities. A few old songs were recorded also at Ikerasak and Nugsuak. The writer visited Upernavik, Cape York, and traveled as far as North Star Bay (76°32' N.) where he met polar Eskimos, a healthy stock whose songs were recorded by phonograph and dance festivals described. Beautiful photographs illustrate the paper. *Copy seen:* DLC.

35834. LÉDEN, CHRISTIAN, 1882- . Über die Musik der Ostgrönländer. København, C. A. Reitzel, 1954. 112 p. 3 illus. (Meddelelser om Grönland, Bd. 152, no. 4) 18 refs. Text in German, part also in Eskimo. *Title tr.*: On the music of the East Greenlanders.

Contains brief description of musical instruments. Eskimo songs from Angmagssalik District and Scoresby Sund. Characteristics of tonality, motifs, rhythm, meter, melody, dynamics, tempo, tone color, etc., are summarized, and the relation between the text and the music, and the dance and the music discussed.

Then follows (p. 35-112) texts, in East Greenland Eskimo dialect with German equivalent, and music of 70 songs recorded by the author during visits to East Greenland in 1910 and 1926.

35835. LEE, FREDERICK WILLIAM, 1889- . A new depth meter for ice and snow. (International Union of Geodesy and Geophysics. Association of Scientific Hydrology. Bulletin, 1938. no. 23, p. 761-771, illus., diagrs., graphs)

"The applicability of electrical measurement of current and potential applied to the ground in areas covered by snow or ice in order to determine the geometrical form and the depth of the snow or ice was studied. Methods of ground configuration of electrodes used consisted of potential measurements made in the immediate vicinity of a current electrode with the other electrode far away, and a method using four ground contacts. Resistivity measurements on snow indicate that values of 100,000 ohms/cm are low and values of over 10,000,000 ohms/cm are frequent. Modifications of the apparatus which are suggested include the use of a microammeter, very light batteries, and light wire. Ordinary stakes of iron, steel, or aluminum may be used for the current-stakes, and a copper terminal inserted in a saturated CuSO_4 solution for the potential ground contacts. Personnel consists of an observer and a helper for measurements of a depth of 100 ft. or less."—SIPRE.

35836. LEE, OWEN S. Heat exchange resulting in ice formation. (American Meteorological Society. Bulletin, Feb. 1954. v. 35, no. 2, p. 87-88)

Contains abstract of paper presented at the 128th National Meeting of the Society, Apr. 28-30, 1954, Baltimore, Md. The ice potential theory of Zubov (1938) and Defant (1949) modified and used by the U. S. Hydrographic Office has given good forecasts. Ice growth curves may be drawn for oceanographic stations from postulation of heat loss (1) by radiation and evaporation from the sea surface and (2) by conduction after ice formation. Forecast for ice season 1952-53 in Baffin Bay-Davis Strait was confirmed by observations in

summer 1953. Forecasts are uncertain beyond the 150-day limit.

Copy seen: DGS.

35837. LEE, OWEN S., and L. S. SIMPSON. A practical method of predicting sea ice formation and growth. Washington, D. C., Sept. 1954. 27 p. text map, graphs, tables. (U. S. Hydrographic Office. Technical report 4) 4 refs.

"A method is described for preparing long-range forecasts (up to 150 days) of dates of ice formation and ice growth in open seas with relatively constant salinity and density. The forecasting techniques developed are based on methods proposed by Defant and Zubov for computing the ice potential from existing or predicted thermohaline and meteorological conditions. Forecasts of ice growth based on the ice potential can be used only during the period when ice thickness is increasing, and the method is limited to open-sea areas where winter and not polar ice is the dominating feature. Forecast and observed ice boundaries in Baffin Bay and Davis Strait for the 1952-53 season are mapped and show good agreement."—SIPRE.

35839. LEECHMAN, JOHN DOUGLAS. 1890-. The father of place names. (Beaver, Autumn 1954. Outfit 285, p. 24-28, port., 5 illus.)

Contains biographical sketch of Robert Bell, 1841-1917, geologist, naturalist, chemist, and physician, member of the Geological Survey of Canada from 1856 till 1908. His extensive field work included the Hudson Bay and Strait region, Baffin Island, and Great Slave Lake. Most of the names which he gave to more than 3,000 topographic features are still in use. He was an early advocate of the Hudson Bay Railway. From

1901-1906 he was acting director of the Geological Survey.

35844. LEHMANN, H., and others. Das Karstphänomen in den verschiedenen Klimazonen. (Erdkunde, 1954. Bd. 8, Heft 2, p. 112-39, illus., text maps, diagrs., cross-sections) 8 refs. Text in German. Summary in English. *Other authors:* J. Roglič, C. Rathgens, G. Lasserre, H. Harrassowitz, J. Corbel, and P. Birot. **Title tr.:** Karst phenomena in the different climatic zones.

Includes notes by J. Corbel (p. 119-20) on karst in cold climates (high mountains and polar regions). In areas where large amounts of snow are available at certain times, development of large subterranean hollows is favored. Within permafrost areas on high mountains no dolines occur, development of subterranean karst phenomena is hindered, and blockfields are common on the surface. In polar limestone regions, permafrost plays an important role in blocking sub-surface circulation. Subterranean cavities formed in earlier geologic periods are filled with ice. Areas mentioned include Victoria Island, part of Ellesmere Island, Peary Land (North Greenland), Svalbard (including Bjørnøya), and northwest Siberia.

35847. LEITCH, ADELAIDE. Yellowknife: town of the air age. (Canadian geographical journal, May 1954. v. 48, no. 5, p. 168-77, 19 illus., text map)

Contains popular description of the town of Yellowknife (62°27' N. 114°21' W.) on Great Slave Lake. The population, houses, importance of the bush plane, agriculture, the Dogrib Indian settlement, gold mining, and fishing are briefly discussed.

Copy seen: DGS.

35848. LELE, P. P. Relationship between cutaneous thermal thresholds skin temperature and cross-sectional area of the stimulus. (Journal of physiology, Nov. 29, 1954. v. 126, no. 2, p. 191-205, 2 fig., 4 tables) 18 refs.

Contains account of extensive experiments and observations made on various sites of the hand. Thresholds to cold and warmth varied from subject to subject and from site to site, and did so independently of each other. They were, however, "consistently related to the skin temperature" of the site tested. The thresholds also varied in relation to the cross-sectional area of the stimulus.

35862. LENINGRAD. ARKTICHESKII NAUCHNO-ISSLEDOVATEL'SKII INSTITUT. O novykh sovetskikh issledovaniiakh i otkrytiiakh v Tsentral'noi Arktike. (Akademiia nauk SSSR. Izvestiia, seriia geograficheskai, Sept.-Oct. 1954, no. 5, p. 3-16, plates, diagrs., maps incl. 2 fold.) Text in Russian. Translated into English by E. R. Hope (item above). *Title tr.*: On recent Soviet explorations and discoveries in the Central Arctic.*

A general survey of Russian scientific work in the Arctic Basin immediately prior to, and since World War II. Some particulars are given on the High Latitude Expeditions of 1948, 1949 and 1950, the drifting station "North Pole-2," 1950-

1951, and the current High Latitude Expedition, 1954-1955; together with a text map (p. 5) showing tracks of various drifts: the *G. Sedov* 1937-40, the drifting stations "North Pole-1" in 1937-38, "North Pole-2" in Apr. 1950-Apr. 1951, and (probable drift of) its ice camp during 1951-1954, also "North Pole-3" and "North Pole-4" in Apr.-Sept. 1954. The scientific achievements of all these expeditions are discussed together in four sections:

(1) Peculiarities of the Arctic Basin bottom relief; discovery of the great submarine range (p. 5-9). Bathymetric features of the Basin as conjectured in 1948 are depicted on fold. map (fig. 7) and as known in 1954 (fig. 8) after more than two hundred bottom soundings made during recent Soviet investigations. On fig. 8, Lomonosov Range is shown in its full extent (approx. 78°N . 141°E . 87°N . 60°W .) and contours, and four major bottom depressions are evident; data on sea-water temperature at various depths are summarized (fig. 6) and hydrobiological investigations noted.

(2) New data on the ice cover of the central Arctic Basin (p. 9-11). Distribution of various ice formations, the "ice islands," and the character of the ice drift are discussed.

(3) Variability of the aerometeorological conditions; new data on radiation balance (p. 11-12). The view formerly held of a permanent high pressure over the Arctic Basin is refuted; the positive annual radiation balance is proved by actinometric observations of the drifting station "North Pole-2" 1950-1951.

(4) Discovery of a singular magnetic anomaly and new laws (zakonomernost') of magnetic perturbations in high latitudes (p. 12-16). The hypothesis of a "Second Magnetic Pole" is rejected and the results of magnetic observations are summarized on three text maps.

35864. LENINGRAD. ARKTICHESKII NAUCHNO - ISSLEDOVATEL'SKII INSTITUT. Polharnye stantsii SSSR. (*Its:* Bülleten', 1931. v. 1, no. 1/2—12, p. 14—15, 49—51, 79—80, 104—106, 122—23, 154—56, 183—85, 218—19, 243) Text in Russian. Summaries in English. *Title tr.:* Polar stations of the U.S.S.R.

Current notes on activities in 1930—31 of the Soviet northernmost stations: (1) in Tikhaya Bay, Franz Joseph Land, headed by I. M. Ivanov; (2) on Sergeya Kameneva (now Sedova) Islands (Domashniy Island?), Severnaya Zemlya, headed by G. A. Ushakov; (3) the Geophysical station on Bol'shoi Lyakhovskiy Island, New Siberian Islands, headed by N. N. Shpakovskii, and (4) the station, then under construction, on Mys Zhelaniya, Novaya Zemlya (p. 123, 156, 183). These notes, based chiefly on radio reports from heads of stations, refer to construction, development, equipment, personnel, everyday work, trips made, hardships endured and achievements. The precarious situation of the station on Bol'shoi Lyakhovskiy due to supply difficulties and to the illness and evacuation of part of the staff, is particularly stressed. *Copy seen:* DLC.

35865. LENINGRAD. ARKTICHESKII NAUCHNO - ISSLEDOVATEL'SKII INSTITUT. The publishing activity of the Institute for the scientific exploration of the North, 1920—1930. (*Its:* Bülleten' 1931. v. 1, no. 3—4, p. 70—74) Text in English.

List, in English translation, of 50 volumes of Transactions (*Trudy*) of the forerunner of the All-Union Arctic Institute, with titles of the papers in each volume and authors' and editors' names. For the period 1920—1930, this list is, in some respects, fuller than that published in 1940 (*Arctic Bibliography*, No. 9909) as it includes names of R. L. Samoilovich, M. M. Ermolaev and others which were eliminated from the later list.

35876. LEPIOTIER, Contre-Amiral. L'importance stratégique du secteur arctique. (Revue de défense nationale, Jan. 1954. n. ser., t. 18, p. 5-21, illus., map) Text in French. English digest in *Military review*, Sept. 1954. v. 34, no. 6, p. 90-98. **Title tr.:** The strategic importance of the arctic sector.

Soviet and American activity in the Arctic is described, including a brief history of transpolar flights, organization of the Main Administration of the Northern Sea Route, and the utilization of float-ice for landing aircraft and setting up meteorological stations. The use of submarines in arctic waters as radar pickets, guided missile launchers, and for air-ice rescue operations is indicated. Operating techniques including clothing, shelter, transportation and combat are briefly discussed (p. 16-20) with emphasis on experiences gained from Exercise Musk-Ox. It is concluded that "the Arctic . . . possesses a strategic defensive character for the Americans, and is . . . the only route

open to a Soviet offensive strategy aiming at the North American territory.

35878. LESNOE KHOZĀISTVO. Puti razvitiĭa lesnogo khozāistva RSFSR. (Lesnoe khozāistvo, Feb. 1954. v. 7, no. 2, p. 27-29) Text in Russian. **Title tr.:** Ways of developing forestry in the R. S. F. S. R.

Contains report of a meeting in Moscow at the end of 1953, of the forestry administration chiefs of the R. S. F. S. R. Summaries are included of the addresses of Comrades Karnakov and Kovalin, chiefs respectively, of the Krasnoyarsk and the Northern and Ural forestry administrations. The former stated that Krasnoyarsk forests cover 150 million hectares; the average forestry unit (leskhoz) is 6-8 million ha., and the average forestry-farm (Lesnichestvo), 2.5 to 3 million ha.; due to lack of proper instruction, adapted to local conditions, the management of these forests shows many defects. Kovalin stated that the output of the forests under his supervision is 42.9 percent of the total for the R. S. F. S. R., and that 20 million ha., formerly covered with forest, now require reforestation; of this some 10 million ha. is under silvicultural work but annual artificial reforestation covers only 34-37 thousand ha., and vast areas stand bare; only highly mechanized silvicultural work can save the situation. **Copy seen:** DLC.

35879. LESTER, J. C. Navigating north of sixty. (United States Naval Institute. Proceedings, July 1943. v. 69, no. 485, p. 957-58. illus.)

Contains a number of suggestions for navigators of ships sailing in high latitudes. Precautions necessary when taking star fixes due to mirages and to stars on northerly bearings being on their lower transits are indicated. U. S. Hydrographic Office pub. no. 214, Ageton and the cosine-haversine methods are good in any latitudes likely to be encountered. The need for plotting sheets from 65° to 70°, from 70° to 75°, and from 75° to 80° with longitude two inches to the degree and latitude in proportion is indicated. Further suggestions are made by E. B. Collins, q. v.

35881. LEVIN, MAKSIM GRIGOR'EVICH, 1904- . Nymylany (korñaki). (Sovetskoe kraevedenie, Aug. 1936, no. 8, p. 45-53, 4 illus.) 19 refs. Text in Russian. *Title tr.*: The Koryaks.

An historical sketch of this people, who numbered 7434 by the 1926/27 census, 45.2 percent settled, 54.8 percent nomadic, and who dwell in the Kamchatka Peninsula and northern bordering regions. The discovery of the Koryak country by Vladimir Atlasov about 1697, wars between Cossacks and Koryaks, the subjugation and colonial exploitation of the natives are outlined. The economy of reindeer or interior Koryaks and that of the settled or littoral ones are described. The fishing trade of the littoral Koryaks, their boats and nets, division of the catch, preparation of *ñukola* (dried fish), etc., are reported as observed in 1930. The technique of reindeer keeping (the same as that among the Chukchis) and the friendly exchange of products be-

tween the reindeer breeders and fishers are outlined. The tribal organization of the coastal Koryaks, their hereditary chieftains, exogamy and tribal sanctuaries with idols, the religious beliefs, relics of totemism, whale rites, "dance of the raven", etc., are discussed. Sovietization process since 1920 is also sketched.

Preliminary report on the author's trip to Bulun in 1899 (or 1898?). The journey by steamer (the *Lena*) from Yakutsk, June 5-10, and the town of Zhigansk are described. The condition of the fisheries is surveyed (p. 99-108) with data on the annual catch and its value for the period 1891-97. The fish species (mainly of white fish, *Coregonus*), their occurrence, the catch and its commercial value, the nets and salting methods, exploitation of native fishermen, etc. are reported; with tabular data on 61 fishing grounds and their rent during the period 1878-98. Author concludes that the fishery resources of the region are limited, and conditions not favorable for the development of the industry.

35887. LEWIS, HARRISON FLINT. 1893- . Management of Canada's wildlife resources. (North American Wildlife Conference. 11th, New York. Transactions, 1946. p. 11-16)

Contains information on the Government's administration of wildlife and the agencies managing various branches of the work; also on research; protection of species from extinction; hunting and trapping regulation in the Northwest Territories and in the Yukon Territory, etc.

Copy seen: DLC.

35888. LEWIS, ROBERT B., and H. B. GERSTNER. Blood flow as indicated by temperature changes in rabbit legs before and after exposure to local cold. (American journal of physiology, June 1954. v. 177, no. 3, p. 501-503, 3 fig., 2 tables) 5 refs.

Rate of blood flow was estimated in rabbit's hind leg exposed to a bath of -12° C. for 30 minutes, first alone; second, in combination with a chemical vasodilator; and third, in combination with obstruction by tourniquets. Blood flow throughout 24 hours following cold exposure "appeared, if not increased, to be approximately equal to that in the control leg."

35889. LEWIS, ROBERT B., and P. W. MOEN. The effect of rutin, hydergine and nicotine on the extent of gangrene following experimental local cold injury. (Experimental medicine and surgery, 1953. v. 11, no. 1, p. 9-20, tables) 21 refs. Text in English. Summary in French and German.

Rutin, in doses applied, was ineffective in reducing skin or muscle necrosis of animals with experimentally frost-bitten hindlegs; animals treated with ergot behaved similarly and had a greater death rate than controls. There was no greater loss of tissue in the nicotine-treated groups.

35890. LEWIS, W. V. Pressure release and glacial erosion. (Journal of glaciology, Oct. 1954. v. 2, no. 16, p. 417-22, 2 illus.) 21 refs.

"Two tunnels were dug through a small cirque glacier [Jotunheimen, central Norway] to the rock wall behind (a) the *névé*, and (b) the lower glacier. The upper tunnel revealed shattering of the rock wall due to the freezing of melt water. The bedrock at the end of the lower tunnel was both smoothed and fractured. The problem is to account for the fracturing of the resistant gneiss where the temperature remains at 0° C. throughout the year. The solution offered is that the release of pressure beneath a thick glacier immediately downstream from a *roche moutonnée*, or from a small steep step, enables the stresses within the gneiss to crack the rock. These stresses result from the gradual removal of the overburden, since the gneiss consolidated under the pressure of thousands of metres of rock strata. The glacier can later remove the jointed and broken rock."—*Author's abstract.* **Copy seen:** DGS.

35891. LEWIS, W. V. Walter Ravenhill Brown Battle. (Journal of glaciology, Apr. 1954. v. 2, no. 15, p. 372-73)

Contains obituary of the geomorphologist and glaciologist, W. R. B. Battle, 1919-1953. Educated at Leeds, Cambridge, and McGill Universities, he carried out field work in East Greenland, Norway, Switzerland, and Baffin Island. His research with variations of temperature in bergschrunds is noted. His death occurred during the Arctic Institute of North America expedition to Baffin Island, 1953.

Nov. 29, 1954. v. 37, no. 22, p. 102-109, 11 illus. (10 col.), 2 text maps)

Contains photographs with brief text recounting the July-Sept. 1954 expeditions of the ice-breakers *Northwind* (U. S. Coast Guard), *Burton Island* (U. S. Navy), and *Labrador* (Royal Canadian Navy), and the private research vessel *Monte Carlo* (W. E. Dow, Jr., New York). Approaching from Beaufort Sea, the *Northwind* passed through M'Clure Strait and the *Burton Island* through Amundsen Gulf and Prince of Wales Strait eastward to Melville Sound. The *Labrador* and *Monte Carlo*, traveling westward, reached Melville Sound through Lancaster Sound and Barrow Strait. Only the *Labrador* made the complete Northwest Passage (entire trip, Halifax, N. S., to Esquimalt, B. C.). Observations of ice conditions, mapping, and charting were carried out. The *Monte Carlo* is stated to have located the North Magnetic Pole.

"Measurements of the light intensity in Spitsbergen (77°54' N.) were made with an Eder-Hecht grey wedge photometer. The increase of the blue violet light (3660-4400 Å) is very rapid in spring when the sun first appears over the horizon. The values rise until summer solstice and reach values comparable to those measured in 50° latitude. The variation between cloudy and sunny days is very small compared to stations in lower latitudes. The conclusion is reached that in Arctic regions cloudiness has much less influence on light intensities than elsewhere."—*Meteorological abstracts & bibliography*, Sept. 1954. v. 5, no. 9, p. 1080.

35906. LINDROTH, CARL HILDEBRAND, 1905- . Carabid beetles from eastern and southern Labrador. (Canadian entomologist, Aug. 1954. v. 86, no. 8, p. 364-70) 21 refs.

Contains an annotated list of 82 carabids, native to the Labrador coast from Battle Harbour in the south to Port Burwell and Cape Chidley in the north; based partly on the author's collection made in 1915 between Battle Harbour and Forteau. One species and one subspecies are recorded as new, but not described. *Copy seen:* DSI; MH-Z.

35907. LINDROTH, CARL HILDEBRAND, 1905- . Random notes on North American Carabidae (Coleopt.). (Harvard University. Museum of Comparative Zoology. Bulletin, 1954. v. 111, no. 3, p. 115-61, illus.) 40 refs.

Contains changes in synonymy of about 250 species of North American ground beetles (p. 120-43) arranged according to C. W. Leng, *Catalogue of the Coleoptera of America north of Mexico*, 1920, and its

*Supplements 1-5, 1927-48. Many of these species are native to northern regions of Canada and to Alaska. Certain species groups are discussed. Fifteen species new to the carabid fauna of North America, four of them new to science, are listed; among them are *Notiophilus intermedius* n. sp. (Labrador, Manitoba and Alaska) and *Bembidion (Semicampa) browni* n. sp. (Churchill, Manitoba). **Copy seen:** DSI; MH-Z.*

35911. LIPATOVA, TĖ. P. Ŭzhnyiĭ chesnok na severe Urala. (Agrobiologičeskii, July-Aug. 1954. no. 3, p. 127-28, illus.) Text in Russian. *Title tr.:* Southern garlic in the Northern Ural.

Report on experiment in 1952-53, of a kolhoz in the Ural growing garlic from Rostov-na-Donu in Verkhotur'skiy District; the results show the southern plant's successful adaptation to new climatic conditions.

Copy seen: DLC.

35912. LIPKIN, MARTIN. Measurement of thermal properties of human and animal tissues. (Federation proceedings, Mar. 1953. v. 12, no. 1, pt. 1, p. 89)

Contains account of measurements of products of heat conductivity, heat capacity and density of dead human and bovine tissues, and, "for the first time," living human skin.

Copy seen: DLC.

35913. LIPPAY, FRANZ. Über Wirkungen des Lichtes auf den quergestreiften Muskel, I. Versuche mit sichtbarem Licht an sensibilisierten Kaltblütermuskeln

(Pflügers Archiv für die gesamte Physiologie, 1929. Bd. 222, p. 616-39, 10 fig., table) 30 refs. Text in German. **Title tr.:** On the influence of light upon striated muscle, 1. Experiments with visible light and sensitized, poikilothermic muscles.

Frog muscle sensitized with eosin, erythrosin and other stains, showed violent contractions when exposed to visible light. Two kinds of contractions were observed, the slow, permanent, always present one being attributed to the direct effect of light on the muscle; the quick passing twitches, due to the effect of light upon the nerve endings. Variations in response with different light and stains are also analyzed and discussed.

Copy seen: DSG.

35914. LIPPAY, FRANZ. Über Wirkungen des Lichtes auf den quergestreiften Muskel, II. Versuche mit sichtbarem Licht an sensibilisierten Kaltblütermuskeln; Fortsetzung. (Pflügers Archiv für die gesamte Physiologie, 1930. Bd. 224, p. 587-99, 6 fig.) 13 refs. Text in German. **Title tr.:** On the influence of light upon striated muscle, 2. Experiments with visible light and sensitized, poikilothermic muscles; continuation.

Addition of small amounts of horse-serum to eosin or Bengal-rose solutions inhibits the light-sensitizing effect of these stains upon striated muscle. Lack of oxygen showed a similar effect.

Copy seen: DSG.

35915. LIPPAY, FRANZ. Über Wirkungen des Lichtes auf den quergestreiften Muskel, III. Versuche mit sichtbarem Licht an sensibilisierten Kaltblütermuskeln; Fortsetzung. (Pflügers Archiv für die gesamte Physiologie, 1930. Bd. 224, p. 600-607, 7 fig.) 7 refs. Text in German. **Title tr.:** On the influence of light upon striated muscle, 3. Experiments with visible light and sensitized, poikilothermic muscles; continuation.

Contains account of experiments with sensitized muscles, immersed in isotonic salt or cane sugar solutions, etc. Contraction upon illumination was found to be non-affected by these procedures. The response to light of dead muscle, was also studied.

Copy seen: DSG.

35916. LIPPAY, FRANZ. Über Wirkungen des Lichtes auf den quergestreiften Muskel, IV. Versuche mit ultra-violettem Licht an nichtsensibili-

sierten Kaltblütermuskeln. (Pflügers Archiv für die gesamte Physiologie, 1931. Bd. 226, p. 473-80, 5 fig.) 4 refs. Text in German. **Title tr.:** On the influence of light upon striated muscle, 4. Experiments with ultra-violet light and non-sensitized, poikilothermic muscles.

Ultraviolet light caused lasting contraction of non-sensitized frog muscle, similar to that brought about by visible light. It affected denervated muscle too, suggesting a direct action of the light on the muscle. In other respects UV light acted like visible light.

Copy seen: DSG.

35917. LIPSHITS, SERGEI IUL'EVICH, 1905- . Novye vidy roda *Saussurea*. (Moskovskoe obshchestvo ispytatelei prirody. Bülleten', otdel biologicheskii, Nov.-Dec. 1954. nov. seriia, t. 59, no. 6, p. 71-84) Text in Russian. **Title tr.:** New species of the genus *Saussurea*.

Contains Latin and Russian diagnoses of 16 new species of herbaceous genus *Saussurea* from various regions. *S. ajaensis* from the vicinity of Ayan on the shore of the Okhotsk Sea, and *S. hypargyrea*, occurring in the valley of the Aldan River in Yakutia, are included.

Copy seen: DLC; MH-Z

35918. LIROT, R. E. Le froid ou anesthésie par réfrigération tissulaire. (Maroc-médical, Casablanca, Dec. 1953. année 32, no. 343, p. 1364-66) Text in French. **Title tr.:** Cold or anesthesia by tissue refrigeration.

Contains a general account of chilling as used in dentistry and stomatology, its apparatus and methods; tissue "hibernation," etc.

Copy seen: DSG.

35919. LISOVSKIĬ, KAZIMIR. V turukhanskoĭ taĭge. (Ogonëk, May, 1953. no. 21, p. 6-8, illus.) Text in Russian. **Title tr.:** In the Turukhansk taiga.

Sketches of the life of Yeniseians (Kets and Sel'kups) of the Lenin kolkhoz in the Yeluguy River basin: the operations of the kolhoz and successful activities of a squirrel hunter, a reindeer breeder and a school teacher are described; the advance of acculturation, and the general increase in well-being and comforts of life is noted.

Copy seen: DLC.

35920. LISSNER, IVAR, 1909- . Taiga. Hamburg, Hoffman & Campe, 1951. 299 p. maps on lining paper. Text in German.

Account of adventures while wandering in the taiga of northern Manchuria, south of Mocho on the Amur, accompanied by a Swede and by Orochi guides. The life of the reindeer Tungus or Orochis, about 200 people, is outlined (p. 160-66): their nomadism, courtship and marriage, customs, birth and education of children, etc. The Orochi reindeer and its importance in the life of nomads is sketched (p. 178-89). An attempt to make nomads a settled people leads to their extinction, concludes the author. **Copy seen:** DLC.

35921. LITKE, FEDOR PETROVICH. *Graf, 1797-1882.* Die Tschuktschen; nach F. Lütke. (Archiv für wissenschaftliche Kunde von Russland, 1843. Bd. 3, p. 446-64) Text in German. **Title tr.:** The Chukchis; after F. Litke. An abstract in German by F. Lowe, from L. F. Litke's *Puteshestvie vokrug sviata*, 1834-1836 (*Arctic Bibliography*, No. 10215).

Contains ethnographic sketch of the settled Chukchis, living between Mys Dezhneva and Kolyuchinskaya Guba, visited by Litke on his voyage of 1827-1829. Details are given on their appearance, clothing and dwellings, weapons, boats, fishing, dances and pastimes (tossing on a hide), shamanism, trading, etc. Litke's notes on the reindeer Chukchis and Koryaks are also included, and works of other travelers are quoted in footnotes. **Copy seen:** DLC.

35922. LITTLEHALES, G. W. Finding geographical position in the region of the North Pole. (United States Naval Institute. Proceedings, Aug. 1925. v. 51, no. 8 (whole no. 270), p. 1339-42, fold. map)

Describes quick and reliable method for locating the Sumner line. Values of declination of the sun and moon as given in the *Nautical almanac* for any given time equal the altitudes of these bodies at the North Pole, since there the north pole of the heavens and zenith coincide; hour circles and meridians of longitude coincide with azimuth circles or vertical circles and parallels of declination coincide with parallels of altitude. The Sumner line passes at right angles to the meridian and may be drawn in its actual curvature by means of a template showing the shapes of the Sumner circle on the observer's circumpolar chart. Examples are included to illustrate specific

steps, using H. O. Chart 2560 (here reproduced). **Copy seen:** DLC.

35925. LIVINGSTON, D. A. Reconnaissance of the Labrador Railway . . . 1945. Seven Islands to Lat. N. 54°44' Long. 66°42' W. (Engineering journal, Apr. 1954. v. 37, no. 4, p. 399-405, 5 illus., 2 text maps)

Contains day-by-day account of reconnaissance made by the author, June 8-July 4, 1945, by airplane, canoe, and on foot. Physical features of the country between Seven Islands, Que. and Knob Lake on the Quebec-Labrador boundary are described. The route for the railroad is outlined; the grades encountered along it, and the grading required are briefly discussed. Further reconnaissance was made in Aug.-Sept. 1946.

35926. LLOY, J. M. Literature review on the prevention of ice crystal formation in fuels. Ottawa, July 25, 1950. 55 p.

Mimeographed. (National Research Council of Canada. Report no. MF-2891)

Available information on the formation of ice crystals in fuel, in preparation for a study of chemical methods for preventing filter plugging by ice crystals, is reviewed and summarized. Approximately 100 references with abstracts are given. Attention was particularly directed to experimental procedures.

Copy seen: CaMAI; DLC.

35927. LLOY, J. M. Literature survey of the effect of sub-zero temperatures on fuels and lubricants. Ottawa, July 15, 1952. 186 p. Mimeographed. (National Research Council of Canada. Report No. MP-9)

Contains 322 references dealing with sub-zero operation of aircraft and vehicles, with emphasis on the part played by petroleum products. The references are grouped by subject (then listed alphabetically by author), and most of them have abstracts ranging from 10 to 250 words. They are preceded by a brief discussion of subjects covered by the literature survey, and by a subject index.

Contains a key and an annotated list of 29 species (two new) of this genus of club mosses, with descriptions, critical notes and data on habitat and geographic distribution. Eight of the species are native to Alaska, Greenland and arctic Canada.

Copy seen: DLC; MH-A.

35929. LLOYD, HOYES. Canadian conservation comments. (North American Wildlife Conference. 8th, Denver, Col. Transactions, 1943. p. 6-7)

Brief account of current Canadian wildlife conditions, including those of ducks and geese in the North. Changes affecting wildlife due to defense developments are noted.

Copy seen: DLC.

35930. LLOYD, HOYES. A continental review of the wildlife resource: Canada. (North American Wildlife Conference. 4th, Detroit. Transactions, 1939. p. 75-78)

Contains a discussion of the problem of restoration of fur-bearing animals, especially in the Northwest Territories; the big

game animals of the Territories; waterfowl restoration and conservation, etc.

Copy seen: DLC.

35931. LLOYD, HOYES. Wildlife conservation in the Northwest Territories of Canada. (North American Wildlife Conference. 2nd, St. Louis, Mo. Transactions, 1937, p. 184-87)

The population, its needs of game and the effect of introduction of firearms, are discussed. Three types of game preserves in the area: Wood Buffalo Park, Thelon Game Sanctuary, and native game preserves are described. Introduction of reindeer, conservation measures, fur yield in the Territories in 1935, etc., are noted.

Copy seen: DLC.

35932. LLOYD, TREVOR, 1906- . The geography and administration of northern Canada. Bristol, England, University of Bristol, 1947. Each chapter separately paged. 30 text maps, graphs, 9 tables. Unpublished D. Sc. dissertation, University of Bristol. Approx. 1200 refs.

Contains a detailed study prepared between 1943 and 1947 for the Research Committee of the Canadian Institute of International Affairs, Toronto. Regional emphasis is placed on the Yukon, Northwest Territories, and northern Quebec. Topical emphasis is on the people of the North, native and white; physical geography is considered primarily with regard to its influence on man. Subjects treated in detail are: strategic position of northern Canada; climate; geology, topography, and mapping; minerals and water power; native peoples, health, and education; fur trading, conservation, and wildlife; land use; transportation and communications; administration, its evolution and present organization. *Appendices* include: list of maps of Northwest Territories and Yukon; list of grants to hospitals; an experiment in Eskimo education; method employed in seeking information; education and statistics; data on Royal Canadian Mounted Police training and service; Canadian Government agencies most active in the North; accounts 1943-44; Yukon finances; gazetteer of settlements in northern Canada, their type and geographic coordinates. The extensive bibliography covers background information, discovery and exploration, biology and natural history, geology and minerals, climate, etc.

35933. LLOYD, TREVOR, 1906- . Hammerfest meridian monument. (Geographical review, July 1954. v. 44, no. 3, p. 411-14, illus., table) 9 refs.

This monument is the northern terminus of a line of triangulation extending from Ismail ($45^{\circ}21' N. 28^{\circ}50' E.$) on the Danube River in Ukrainian SSR to Fuglenes ($70^{\circ}40'11'' N. 23^{\circ}40'20'' E.$) on the north side of Hammerfest harbor, northern Norway. It is the northernmost point in the Old World geodetic network. The meridian arc was measured between 1816 and 1852. Field work in Finland began in 1830, and in 1845 was continued northward into Norway, through and beyond Kautokeino to Fuglenes. This point serves today as datum for Norwegian surveys in Finnmark and was redetermined in 1928 and 1950. The monument was damaged in World War II, but the material was salvaged and replaced in its original location.

Copy seen: DLC.

35934. LLOYD, TREVOR, 1906- . Iron ore production at Kirkenes, Norway. Dartmouth College, Hanover, N. H., June 1954. 39 p. 16 illus., 6 text maps, diagr., 2 graphs, 2 tables. Mimeographed. (Technical report. ONR438-03-02) 34 refs.

Kirkenes ($69^{\circ}45' N. 30^{\circ} E.$), a seaport on Varanger Fjord, northern Norway (two miles from the U.S.S.R. boundary), was built in 1906 to export iron ore from the Bjørnevatn mine. Climate and accessibility are briefly discussed. The ore (taconite, 34-37 percent total iron) is mined by open-pit methods. Prior to World War II, exports had reached 700,000 m. tons. Destroyed during the war, the town and plant have been completely rebuilt, and the processing of 2.3 million tons of ore a year is expected. This operation is discussed in some detail. A steam plant at Kirkenes, using Svalbard coal, and small hydro plants on local streams provide power. Production and shipping are described. *Appendices* give climatic data and production and export statistics 1910-1953.

Copy seen: CaMAI.

35935. LLOYD, TREVOR, 1906- . Ivigtut cryolite and modern Greenland. (Canadian geographer, 1953. no. 3, p. 39-52, illus., text map, graph, table) 9 refs.

Ivigtut ($61^{\circ}12' N. 48^{\circ}16' W.$) on Arsuk Fjord, southwest Greenland, is at present the sole commercial producer of cryolite

(used primarily as a solvent in the electrolytic production of aluminum from bauxite). Geologic occurrence of the mineral, mining techniques, export statistics and refining are discussed. In 1949 the mine brought a total revenue of approx. four million dollars. The community, prior to World War II, was entirely European, forbidden to Greenlanders; it operated independently of the Greenland Administration, and tax-free of customs and excise duties. At present rate of mining, the ore will be exhausted by about 1963, with stockpiles sufficient for another decade of shipments. Mild climate, good navigation conditions, and ice-free harbor suggest that the settlement should be maintained, perhaps as a ship repair yard in connection with the nearby Grønnedal Naval Station.

Copy seen: CaMAI.

35936. LLOYD, TREVOR, 1906- . The Norwegian-Soviet boundary; a study in political geography. Dartmouth College, Hanover, N. H., Feb. 1954. 38 p. 6 illus., 7 text maps. Mimeographed. (Technical report, ONR 438-03-01) 51 refs.

The present Norwegian-Soviet boundary was established by agreements signed in 1947 and 1949. It extends for 195.7 km., from the Barents Sea at $69^{\circ}47' N. 30^{\circ}50' E.$ to a monument at Krokfjell, 6.5 km. west of the Pasvik River (Patsjoki) at $69^{\circ}03' N. 28^{\circ}55' E.$ Present political and geographical significance is noted. The Pasvik valley, through which much of the boundary runs, contains timber, fish, hydro-electric, iron and nickel resources; it has a mild climate and relatively fertile soils (in contrast to the generally unproductive surrounding area), and is the natural trade route between northern Finland and the sea. Present population and significance of mining are briefly discussed. Since the 11th century evolution of the boundary has involved territories of Norway, Sweden, Finland, and Russia. Historical details of treaties, geographical problems of boundary demarcation, present boundary administration, and enforcement of the numerous regulations are described in some detail. Problems of utilizing the economic resources of the Pasvik valley while present restrictions are in force, and the difficulties in continued development of Finnish Lapland without direct access to the Barents Sea are outlined.

35937. LLOYD, TREVOR, 1906- . Recent changes in trade and transport in West Greenland. (Canadian geographer, 1952. no. 2, p. 80)

Abstract (only) of paper. The former subsistence economy of Greenland has been replaced by a modern trading economy, with large imports of fuel, construction materials, and consumer's goods, and with increased importance of transport. Imports are noted as of about 50,000 tons per year (coal, salt, 20 percent each, and general cargo), and exports about 60,000 tons (80 percent by weight eryolite).

Twelve American species of the circumpolar boreal region are studied, and conclusion offered that: "Cytological evidence has confirmed the racial status of most American taxa of circumpolar species, as classified by contemporary taxonomists. However, in a number of circumpolar taxa, it has been shown that their evolution has been based on abrupt-speciation so that the types regarded as only races by some taxonomists differ in their chromosome number and are better treated as different species. The following new combinations and names are proposed: *Phyllitis fernaldiana*, *Glyceria hulteniana*, *Helocharis fernaldii*, *Pentaphylloides floribunda* and *P. arbuscula*."—Summary, p. 228-29.

35950. LOPATIN, IVAN ALEXIS, 1888- . The extinct and near-extinct tribes of northeastern Asia as compared with the American Indian. (American antiquity, Jan. 1940. v. 5, no. 3, p. 202-208) 5 refs.

Contains discussion on the extinction of the Old-Siberians shortly after Russian conquest and the greater resistance power of the Neo-Siberians, the Tungusic, Turcic and Mongolian tribes. The original home and migration of Yakuts (who penetrated into Siberia proper about 3,000 B. C.), Tungus (whose original home was somewhere east of the Altay) and Buryats are outlined. These New-Siberians forced the Old-Siberian population to vacate their old habitat for the less hospitable corners of

their territories, and the latter moved in northern and northeastern directions. It is probable that America was peopled by numerous Old-Siberian tribes forced to migrate across the Bering Strait because of these invasions from the south. The New-Siberians did not take part in the peopling of America. The origin, race, and historical fate of some of the Old-Siberians are sketched, e. g. the Yeniseians, Turkicized Samoyeds (Kamass, Karagas, Soyots, etc.), the Gilyaks, Yukaghirs and Ainu.

Contains results of investigation of the effect of temperature on skeletal carbonate mineralogy. Mineralogical determinations are based on X-ray analyses. Primary attention is given to trends at the genus and species level where a temperature effect can be discovered. Types of environmental relations exhibited by calcite- and aragonite-secreting forms, the role of temperature-related aragonite secretion to total carbonate synthesis, environmental dependence in skeletal mineralogy and modes of life, taxonomic and animal geographic implications, and paleoecologic implications are discussed. Examples and analyses include organisms from Adak and Amchitka Islands (Aleutians), St. Paul Island (Pribilofs), an unnamed Alaskan locality, Bering Sea, and Godthaabsfjord, West Greenland.

Contains a revision of the seven species of bison occurring in a fossil condition on this continent, and their complicated synonymy. Descriptions of these species, their synonymy, measurements of horn cores and data on distribution are given.

Bison occidentalis n. sp., occurring in Alaska and Kansas, (p. 758) and *B. crassicornis* from Eschscholtz Bay and Point Barrow, Alaska, are included.

Copy seen: DLC; MH-Z.

35961. LUCAS, FREDERIC AUGUSTUS, 1852-1929. Walrus Island, a bird metropolis of Bering Sea. (Bird-lore, Mar.-Apr. 1901. v. 3, no. 2, p. 45-49, illus., plate)

Contains an account of a trip to Walrus Island, a few miles from St. Paul Island of the Pribilof group in the Bering Sea, with notes on various birds, such as the burgomaster gull (*Larus glaucescens*), Pacific murre (*Uria lomvia arra*), kittiwake (*Rissa brevirostris*), tufted puffins (*Lunda cirrbata*) and cormorants (*Phalacrocorax urile*).

35962. LUCKE, JOHN BECKER, 1908- Katmai shore lines and glaciers. (Geological Society of America. Bulletin, Dec. 1954. v. 65, no. 12, pt. 2, p. 1279)

Describes rugged glaciated, terraced, bedrock shoreline of submergence of Shelikof Strait of Katmai National Monument, interrupted by flat valley trains between rocky headlands. Large valley heads are occupied by recently retreating alpine glaciers. Present glaciers within 20 miles of Mt. Katmai are covered with the 1912 volcanic ash.

Copy seen: DLC.

35963. LUCKE, JOHN BECKER, 1908- Preliminary summary report on the shorelines, glaciation and non-volcanic rocks of Katmai National Monument. (In: Luntz, R. S., and others. Interim report on Katmai Project . . . Alaska, Mar. 1954. p. 50-54)

Contains list of objectives, a summary of findings, conclusions, and recommendations in outline form. Two elevated wave-cut terraces were found (summer 1953), the upper containing deposits of glacial till up to 20 ft. thick and Katmai pumice 6-18 in. thick. Most shore localities expose old volcanic rock, strongly metamorphosed sediments, or igneous intrusives; unmetamorphosed marine sediments are exposed on the outer shores of Katmai, Dakavak, and Hallo Bays. Glaciers flowing from Mt. Katmai to headwaters of Knife Creek and those heading south from the Aleutian Range between Katmai and Snowy Mts. are

completely buried by ash, effectively insulated, and obtain little or no nourishment from snowfields.

Kasvitieteellisiä julkaisuja, 1938-39, pub. 1939. Osa 12, no. 3) 12 refs. Text in German. **Title tr.:** The bog Vanhalammensuo: Kuusamo, Korvasvaara.

Contains notes on the physical geography of the Korvasvaara area on the southern slope of Vaara Mts. on the border of the Salla and Kuusamo districts, investigated in 1937 by the Zoologico-Botanical Society of Vanamo. A pollen study of a local peat bog, Vanhalammensuo, was made. A pollen diagram and profile of the bog is given, and the origin, development and elements (*Picea*, *Pinus*, *Betula*, *Alnus*, etc.) of the former flora discussed.

Copy seen: MH-F.

35967. LUND, HJALMAR MUNTHER-KAAS. The walrus, *Odobenus rosmarus* (L.), off the coast of Norway in the past and after the year 1900, together with some observations on its migrations and "cruising speed." Tromsø, Tromsø Museum, July 25, 1954. 12 p. illus., text map, table. (Astarte, no. 8) 18 refs.

Oldest known written account of walrus hunting off Norway (880-901 A. D.) is noted, and other accounts are quoted on its occurrence from the 16th to 20th centuries. During spring and summer 1954, one (probably the same one) was observed at various points along the north Norwegian coast. A journey of about 1,250 miles made by a walrus in 101 days during 1926 is mentioned.

Contains impressions of an official who visited the region and its principal populated places: Suntar, Megezhka, Nyurba, and Vilyuy. The present-day life of the Yakuts is described in bright colors. Account is given of life in kolkhoses, agriculture (oats, barley and potatoes are cultivated around Suntar), horse and cattle breeding, fishing, hare and squirrel hunting. The Yakut dwellings are described, the folk dance *ogohka* and singing of epic songs. The rich farmers, priests and shamans are said to have been all liquidated; civil war in 1922 is mentioned. A sketch of natural conditions is given: the taiga, many bogs, the sudden change from summer to winter, etc. In the 900,000 sq. km. region only 70,000 people live, Yakuts and a few Russians who are often Yakutized. Illustrated with six sketches by V. Bel'nev.

35971. LUNTEY, ROBERT S., and others. Interim report on Katmai Project, Katmai National Monument, Alaska. Washington, D. C., U. S. National Park Service, Mar. 1954. 138 p. text map. 23 refs.

Contains report on work done by the 14 members of the Katmai Project, June 19-Oct. 7, 1953. This U. S. National Park Service project was supported by the Arctic Institute of North America., the U. S. Army, Air Force, Navy, Public Health Service, and Geological Survey. Members of these agencies participated in the expedition, which

was headed by the senior author. Objectives of the 1953 field season were to appraise: geographic and climatic conditions; changes in shore morphology; volcanic activity and general geology of the area, including determination of what actually happened in the 1912 eruption, nature and extent of mineral resources in the monument, and studies of glacial action; recovery and nature of plant and animal life; animal diseases communicable to man; extent and kinds of human use of the area prior to the 1912 eruption, through study of remains of both prehistoric and historic habitations. Background information on the region and a summary of findings in each phase of the Project are given, followed by reports of members of the field party, each of which is listed in this Bibliography under the author's name.

35972. LUPACH, V. S. Ivan Fedorovich Kruzenshtern i ĭriĭ Fedorovich Lisĭanskĭĭ. (In: Lupach, V. S. Russkie moreplavatelĭ, 1953, p. 137-64, illus., port., 2 text maps) Text in Russian. **Title tr.:** Ivan Fedorovich Kruzenshtern and ĭriĭ Fedorovich Lisĭanskĭĭ.

Contains biographical sketches of these two navigators, commanders of the two naval vessels which made the first Russian circumnavigation of the world in 1803-1806. Kruzenshtern, on the sloop *Nadezhda*, left Kronshtadt on July

27, 1803, rounded Cape Horn, and reached Petropavlovsk, Kamchatka, in Aug. 1804. He stayed in Far Eastern waters for more than a year, visiting Japan, Kuril Islands, and Sakhalin, surveying the coasts of these islands, and returning twice to Petropavlovsk. In the fall of 1805, Kruzenshtern sailed to Macao where he met the *Neva* commanded by Lisĭanskĭĭ, who in the meantime had surveyed the Hawaiian Islands and visited Kodiak Island, taking supplies to the Russian-American Company. Both ships returned to Kronshtadt in July 1806 via Cape Horn. Both commanders published narratives of this expedition, listed as No. 9375-9382 and No. 10207-10209 of *Arctic Bibliography*.

35973. LUPACH, V. S., editor. Russkie moreplavatelĭ. Moskva, Voennoe izd-vo Ministerstva oborony, 1953. xxxii, 671 p., illus., ports. map, text maps. Text in Russian. **Title tr.:** Russian navigators.

Basic reference work on the exploration of the arctic regions and on the role in it of Russian seamen. The work comprises biographical sketches of 29 prominent Russian navigators (mostly navy officers) of the pre-Revolutionary era, with data on their voyages and discoveries, followed by descriptions of various expeditions and explorations carried out under the Soviet régime. These are introduced with historical reviews of Russian navigation, explorations and discoveries, by N. N. Zubov (p. iii-xxxiii) and by D. M. Lebedev and G. K. Shumelko (p. 1-20).

Appended are extensive biographic, geographic, and expeditionary supplements (p. 473-626) and indexes (p. 627-71) to individuals, geographic features and vessels named throughout the entire work. Thirty-six of the 37 papers and supplements as listed below with titles translated, concern the arctic regions, and appear in this Bibliography under their authors' names.

ZUBOV, N. N. Russian navigator-explorers of the oceans and seas.

LEBEDEV, D. M., and G. K. SHUMELKO. Russian voyages before the 18th century.

KARELIN, D. B. The discovery of Vize Island.

VIZE, V. ĬU. The voyages of *Sibiriatkov*, *Cheliŭskin*, and *Litke*.

DOBROVOL'SKIĬ, A. D. Around Franz Joseph Land.

KARELIN, D. B. The first high-latitude expedition.

KRENKEL', Ė. T. The station "North Pole."

CHERNENKO, M. B. The fortieth navigation season of the ice-breaker *Ermaĭ*.

BADIGIN, K. S. The drift of the *Sedov*.

Supplements:

MAGIDOVICH, I. P. Renowned Russian navigators; a guide.

MAGIDOVICH, I. P. Russian names on the maritime map of the world.

ZUBOV, N. N. Round- and half-around-the-world voyages of Russian sailing vessels.

Indexes of personal, ships' and geographic names.

In a critical review (*pub. in Vsesoiŭznoe geograficheskoe obshchestvo, Izvestiia*, Nov.-Dec. 1954, v. 86, no. 6, p. 559-61), V. O. Gurefskiĭ claims to show fundamental defects in this work: poor selection, including persons without merit, and omitting several famous Russian seafarers; errors in Magidovich's Russian names on the map of the world; mistakes in Zubov's list of Russian round-the-world voyages; confusion in the introduction, etc. He also mentions other reviews of the book in newspapers and magazines, and critically evaluates those favorable. **Copy seen:** DLC; MH

35974. LUPANOVA, N. P. *Geologicheskie raboty na Zemle Frantsiia-Iosifa letom 1932 goda.* (Leningrad. *Arkticheskiĭ . . . institut. Būlleten'*, 1932, v. 2, no. 8-10, p. 197-98) Text in Russian. **Title tr.:** Geological work on Franz Joseph Land in summer 1932.

While the expedition on the ice-breaker *Malygin* cruised in the waters of Franz Joseph Land, its geological party, headed by the author, made explorations on Hooker and Rudolf Islands; glacial debris deposits, basalts and Jurassic deposits are the main features of Hooker Island; basalts, but no Jurassic deposits, were found on Rudolf Island.

35976. LUSAR, RUDOLF. The Red fleet is being built up. (United States Naval Institute. Proceedings, Jan. 1954. v. 80, no. 1, p. 56-66, illus., 2 text maps)

Includes discussion of the White Sea fleet (p. 63-64, 66) assigned Priority II (after the Pacific fleet) in the Soviet fleet development plan. Location of shipyards and type of ship being built at each is noted. Four battleships, one aircraft carrier, and five or six heavy cruisers are said to have been completed, or are being completed. Smaller units are available as follows: destroyers, 31 serviceable, 6 under construction; torpedo boats, 16 serviceable, 5 under construction; submarines, 209 serviceable, 55 under construction. The fleet is constantly reinforced from the Baltic Sea fleet. Personnel strength is 85,000 men.

35977. LUSENA, C. V., and W. H. COOK. Ice propagation in systems of biological interest. II. Effect of solutes at rapid cooling rates. (Archives of biochemistry and biophysics. June 1954. v. 50, no. 2, p. 243-51, 4 fig.) 11 refs.

A study on the effect of solutes on freezing behavior of gelatin, sucrose and glycerol solutions, made by a new dilatometric method. Increasing the concentration of solute or the rate of cooling increased the difference between freezing point and temperature of freezing. Addition of hexagonal crystals of silver iodide and calcium carbonate raised the "critical nucleation temperature" and thereby the freezing temperature. Size and growth of ice crystals are also discussed.

Contains an account of physiological changes taking place with the advance of induced hypothermia in man and some other vertebrates; subsequent resuscitation and measures to be taken for its success; bearings and prospects of induced hypothermia for cardiac surgery.

Copy seen: DSG.

35980. LUYET, BASILE JOSEPH, 1897-, and F. GONZALES. Growth of nerve tissue after freezing in liquid nitrogen. (Biodynamica. Dec. 1953. v. 7, no. 143, p. 171-74, illus.) 5 refs.

Pieces of chick embryo brain frozen in liquid nitrogen after a one-minute treatment in 60 percent ethylene glycol solution, showed growth of nerve fibers. The growing fibers were somewhat less abundant in the frozen explants than in the controls, but their final length and morphological characters were practically identical in both. In periodically washed preparations, both frozen and controls, there also appeared migrating, nucleated cells with monopolar or bipolar processes.

Account of a study aimed to determine to what extent protection against freezing injury, afforded by glycerol to small pieces of chick embryo heart, may be attributed to osmotic dehydration. No conclusion however, could be drawn until it is known to what extent the advance "of the wave of osmotic shrinking coincides with the advance of the wave of protection." *Copy seen:* DLC.

35984. LYON, THOBURN CASSADY, 1896-. Practical air navigation. 6th ed., 2d print, with minor changes. Commercial ed. pub. by the author, 8814 Reading Road, Silver Spring, Md., 1949. vii, 356 p. illus., diagrs., charts (fold. in pocket) First pub. in 1935 (60 p.) by U. S. Coast and Geodetic Survey, and repub. twice, as its Special publication no. 197; in 1940 and 1945, pub. by Civil Aeronautics Association as its Civil Aeronautics bulletin no. 24; in 1948 and 1949 pub. by author with text completely rewritten, new illus. and material added.

Contains 14 chapters on: problems of air navigation; the earth, its form and features; chart projections for air navigation; chart reading; instruments; light-plane navigation; special problems of dead reckoning; air navigation computers; radio navigation; electronic navigation; pressure pattern flight; north polar navigation; the practice of long-distance navigation. The chapter dealing with polar navigation (p. 316-27) discusses celestial navigation, line of position or circle of position, the grid system, flying the grid course, and radio navigation. Examples showing methods for calculating latitude and longitude, geographic position and navigation procedure as well as questions and problems, glossary of terms, etc., are included.

Text in Russian. *Title tr.:* The Vilyuysk District of Yakutsk Province.

Monograph on a district then of undefined limits between 60° and 68° N. lat. It is based partly on materials from the Vilyuysk Expedition of 1853-1855, sponsored by the Siberian Branch of the Russian Geographical Society and by S. F. Solov'ev, a merchant who contributed half a pood (over 8 kg.) of gold to its support. It was headed by the author, a geographer and naturalist (of German origin); with him were Zandgagen, a topographer, and the naturalist, A. Pavlovskii. Maak, delayed, only reached Irkutsk in 1853; there he wintered, while Zandgagen made a trip to the upper reaches of Nizhnyaya Tunguska River, crossed the Yenisey-Lena watershed, traveled down Chona and Vilyuy Rivers to Vilyuysk, thence by horseback to Yakutsk. In Jan. 1854, Maak traveled from Irkutsk via Yakutsk and the mouth of the Vilyuy to Vilyuysk, thence northward to Olenek River (at 68°15' N.), and back via Lake Syuryunda and the Chona River to Suntar, Olekminsk, and, in Mar. 1855, Irkutsk. Publication of the results was delayed by lack of funds, also by a fire in Irkutsk in 1879, which destroyed the entire stock of volume one. All the volumes are richly illustrated, partly with colored plates.

Vol. 1, *Materials for the study of the climate of Yakutsk Province* consists of tabular data (p. 1-209) of meteorological observations by members of the expedition and by different individuals for various periods between 1854-1878, at

Yakutsk, Kharangachilakh, Vilyuysk, Kempendyay saline springs, Verkhoyansk, Sredne-Kolymsk, etc. These data are followed by a general discussion of maximum and minimum temperatures, first and last frost, air temperature: the coldest spot in the province, contrary to the then general opinion, is stated to be not Yakutsk, but Verkhoyansk (p. 218-27); ground temperature and permafrost (p. 227-30), ice valleys, ice thickness, freezing and opening of rivers and lakes spring floods, humidity, precipitation, storms, wind and cloudiness. Map with isotherms is appended.

Vol. 2, *Outline of the geography and natural resources*, deals with the area (nearly one million sq. versts), history of conquest and exploration; the Vilyuy River basin (p. 11-36), with brief remarks on the geology of the banks, main tributaries and settlements; upper reaches of Nizhnyaya Tunguska and Chona Rivers from Zandgagen's observations in 1853 (p. 46-132). Fauna is treated in brief (p. 135-97): notes on 28 species of mammals (Russian, Latin, Yakut and Tungus names given), 121 birds, 18 fishes, and 121 insects (Latin name and occurrence), reptiles, butterflies, spiders, worms, molluscs. The botanical results (p. 201-316), partly worked up by F. Meinshausen, q.v., includes notes on 470 plant species in 76 families, summarized in a tabular list, with distribution outside the Vilyuy District, also (not in Meinshausen's paper) notes on the principal (9) trees of the district. Survey of the geology and minerals (p. 319-68) includes description of the Baginsk (61°58' N. 119°30' E.) and Kempendyay saline springs, brown coal deposits in the Kempendyay River basin; the fossil collection is described by Academician F. B. Shmidt (p. 355-68). *Appendices* include: notes on the Russian language as spoken in Yakutia; chemical analysis by Prof. M. V. Erofeev, of iron ore found near the Markha River mouth; map of salt deposits in Kempendyay River basin, routes of the expedition, maps and plans of Lake Syuryunda, Vilyuysk, Yakutsk, etc., and a general col. and fold. map of the area with the expedition's itineraries; list of (69) points with geographic coordinates established by F. F. Miller 1873-74; and extensive alphabetical indexes, with annotations of geographic features in the Nizhnyaya Tunguska,

Olenek and Vilyuy River basins (p. xxvii-cvii).

Vol. 3, *Demography and ethnography*. The Yakut, Russian and Tungus (3700) population in the Vilyuy River basin was 55,656 in 1859; data for the Russian and Yakut inhabitants are tabulated according to *ulus* and *naslegs* and 664 settlements (p. 15-36). Detailed descriptions are given with numerous illustrations, of Yakut dwellings and household equipment, food and its preparation; clothing for men and women, footwear; health conditions, diseases, including leprosy and arctic hysteria. The physical appearance of Yakuts and their mental character are sketched, also family life, child care, superstitions and religious rites, shamanism, language and folklore, etc., their occupation and economy: agriculture, animal breeding, fishing, iron mining and crafts. Yakut names of lakes are given, their methods of measuring distances and time; prices and commerce in 1864. *Col. plates* show ethnographic objects of the Yakuts (and a few of the Tungus): ornaments, clothing, tools and implements, traps and nets, etc. **Copy seen:** DLC.

35989. MacBRIDE, WILLIAM D. The White Pass Route. (Beaver, Autumn 1954. Outfit 285, p. 18-23, 8 illus., text map)

Anecdotal account of the White Pass and Yukon Railway from Skagway in Southeast Alaska, to Whitehorse in Yukon Territory; it was started in 1898 during the Gold Rush and completed in 1900. Difficulties and some of the participants in its construction are described; the route, elevations, costs, etc., of the 110-mile, narrow-gauge line, and

its operation in World War II, are indicated. It is now Canadian-owned and is being modernized.

35992. McCALL, J. G. Glacier tunnelling and related observations. (Polar record, July 1954. v. 7, no. 48, p. 120-36, 4 illus., diagrs.) 22 refs.

"Tunnelling and observational techniques and apparatus used in the Vesl-Skautbreen [cirque glacier, central Norway] are described. A lower and upper tunnel and three pits were excavated manually with ice picks and shovels. Three survey control points were established to aid tunnelling operations and to measure the movement of bamboo stakes set in the glacier surface. Movement in the englacial zone was observed

by measuring the displacement of the lower tunnel. Glacier tunnelling by hand is practicable and the ice is not susceptible to sudden collapse. The tunnel is subject to distortion and precautions against possible flooding are necessary."—SIPRE. Work was carried on in 1951-1952 by a 35-man group of Cambridge University students.

35994. McCLEARY, ROBERT A., and C. T. MORGAN. Food hoarding in rats as a function of environmental temperature. (Journal of comparative psychology, 1946. v. 39, p. 371-78)

"Employing various temperatures between 9° C. and 34° C., the authors found that hoarding and environmental temperatures are inversely related. The statistical treatment is in terms of decilog hoarding scores which permit the relation between hoarding and temperatures to be described by the equation: $\log H = 18.5 - 0.42 T$. An interpretation and further problems are suggested."—*Psychological abstracts*, 1947. v. 21, p. 209.

35995. McCLEARY, ROBERT A. Psychophysiological effects of cold, 1; the role of skin temperature and sensory sensitivity in manual performance decrement. U. S. Air Force. School of

Aviation Medicine, Randolph Field, Texas. Project no. 21-1202-0004, report no. 1, Jan. 1953. 16 p. illus., 6 refs.

Report on a test of manual performance of 72 individuals in ambient temperatures ranging from +70° to -40° F. "Percent-decrement in performance increased as a positively accelerated function over this temperature range." The rate of decline of digital skin temperature and sensitivity to cold differentiate the subjects significantly in their ability to perform at low temperatures. Cold tolerance may also be related to complexion.

Copy seen: DSG.

35996. McCLEARY, ROBERT A., and R. H. JOHNSON. Psychophysiological effects of cold, 2; the role of alcohol ingestion and complexion in manual performance decrement. U. S. Air Force School of Aviation Medicine, Randolph Field, Texas. Project no. 21-1202-0004, report no. 2, Mar. 1954. 3, 9 p. illus., tables, 5 refs.

Ingestion of a moderate amount (60 cc. of 40 percent) alcohol at -40° F. resulted in less time being spent in "warming up" while performing a manual task. The "working time" required to complete the task was also significantly influenced. Complexion differences were not reflected in the performance scores.

35997. McCLELLAN, CATHARINE, 1921- . The interrelations of social structure with northern Tlingit ceremonialism. (Southwestern journal of anthropology, 1954. v. 10, p. 75-96) 28 refs.

Basic social units from the *qwan* (largest unit) down to the individual are briefly noted. Three categories of ceremonialism, feasts, potlatches, and peacemaking, are described with particular emphasis on the potlatch. Position of the *qwan*, kin groupings, and the individual in ceremonialism are considered, and the sib and its crests are discussed. It is concluded that Tlingit ceremonialism "serves to strengthen and reaffirm basic social groupings, even at the expense of conflicting loyalties."

36007. McGOVERN, JOHN P. An unusual case of hypersensitivity to cold complicated by paroxysmal diarrhea. (Journal of allergy, Nov. 1948. v. 19, p. 408-410) 5 refs.

Contains presentation of a case of hypersensitivity to cold in a white male, aged 33. Severe systematic reactions were observed following swimming, with paroxysmal diarrhea complicating the reactions on three occasions. Benadryl hydrochloride failed to modify the response to cold. **Copy seen:** DSG.

36008. MacGREGOR, ARCHIBALD GORDON, 1894- . Eruptive mechanisms: Mt. Pelée, the Soufrière of St. Vincent and the Valley of Ten Thousand Smokes. (International Union of Geodesy and Geophysics. Associa-

tion of volcanology. Bulletin volcanologique, 1952. Série 2, t. 12, p. 49-74, 2 fold. tables) 28 refs.

Includes (p. 62-70) a summary of the work of C. N. Fenner in the Mt. Katmai region of Alaska and sources of misconceptions regarding Fenner's views. Nature of the tuff deposits in the Valley of Ten Thousand Smokes are described and Fenner's explanation of the eruptive mechanism in the Valley is outlined. Comments on his inferences are made and a modification of his hypothesis is suggested. **Copy seen:** DGS.

36009. MacGREGOR, ARCHIBALD GORDON, 1894- . Shear-stress fabrics of ice and quartz; some comments on a paper by Dr. H. Bader. (Journal of glaciology, Nov. 1952. v. 2, no. 12, p. 100-103) 15 refs.

Contains discussion of parts of H. Bader's *Introduction to ice petrofabrics*, q. v., which was based on studies of Malaspina Glacier and Juneau Ice Field, Alaska. Glide-planes in ice, interlocking crystals, and ice flow are discussed, and comparisons drawn between behavior of ice, rock, and metals.

36011. MACHT, HANS G. Das erdmagnetische Feld der Polargebiete. (Zeitschrift für Meteorologie, 1947. Jahrg. 1, Heft 10, p. 289-97, 5 fig.) 10 refs. **Title tr.:** The geomagnetic field of the polar regions.

The permanent geomagnetic field of the polar zones, especially the north-polar distribution of horizontal force is discussed. The formal computations are based on the "canonic-development" of the magnetic potential.

Copy seen: DWB.

36012. MACHT, HANS G. Erich Etienne, zum zehnjährigen Todestag am 23. Juli 1952. (Polarforschung, 1952, pub. 1954. Bd. 3, Heft 1-2, Jahrg. 22, p. 197-98) Text in German. *Title tr.:* Erich Etienne, in commemoration of the tenth anniversary of his death, on July 23, 1952.

Contains brief sketch of Etienne's activities in northern Norway and Spitsbergen as a flight meteorologist with the Luftwaffe prior to his death when shot down in Spitsbergen. He was best known for meteorological and geophysical research carried out as participant in the Oxford University Greenland Expedition of 1938. *Copy seen:* CaMAI; DLC.

36013. McHUGH, JOHN LAURENCE, 1911- . Geographic variation in the Pacific herring. (Copeia, 1954, no. 2, p. 139-51, diags.) 28 refs.

The herring's geographic variation from Alaska to southern California, is investigated mainly on the basis of the mean number of vertebral centra: the other characters for detection of population differences are counts of dorsal, anal, and pectoral rays, ventral scutes, and gillrakers (tables 1-10). The general conclusion is that the number of vertebrae decreases from north to south. The samples of Alaska herring used in this study were from Shumagin Islands, Port Dick, Cape Kuliuk and Prince William Sound. *Copy seen:* MH-Z.

36014. MacIVER, ANGUS F. Mystery at Mack Lake. (Beaver, Autumn 1954. Outfit 285, p. 43-45, illus.)

Contains description of abandoned camp and expensive guns, trapping and other equipment more than 20 years old found by the writer while trapping at Mack Lake, headwater of Herriot Creek, 75 miles southwest of Churchill, Man. The R. C. M. P. have been unable to trace the owner. Writer speculates on identity of the man, his means of access to the region, and his possible fate.

36015. MACKAY, J. ROSS. Fissures and mud circles on Cornwallis Island, N.W.T. (Canadian geographer, 1953. No. 3, p. 31-37, 2 text maps, cross-section, profiles) 3 refs.

Large fissures, forming outlines of polygons and probably underlain by ice

wedges, are common in the gravel of raised beaches, where they probably form in winter by contraction of the ground. Longitudinal fissures (which trend down slope at right angles to the contour) usually form before transverse fissures (which follow the contour). Mud circles averaging eight to ten inches in diameter also occur on the beach ridges and intervening swales. They are associated with pits in the gravel, are often underlain by ice lenses, and are probably injection phenomena. In youth the plugs lie beneath the pits, in maturity they break through into the pits, and in old age the circles coalesce. Problems needing further study are outlined.

Copy seen: CaMAI.

36016. MACKAY, J. ROSS. Physiography of the Darnley Bay area, N. W. T. (Canadian geographer, 1952. No. 2, p. 31-34, 2 text maps)

Contains brief notes on some physiographic features of the region 69°45' N. 123°45' W. Ground moraine, in places over 100 ft. thick, covers about 90 percent of the land area. Ice movement in the region during the Pleistocene does not seem related to any known center of ice accumulation. Present drainage was established by stream capture in postglacial time. Comments are made on widespread frost action, landslides, ice lenses, an ice fan, wind abrasion, and coal deposits.

Copy seen: CaMAI.

36017. MACKAY, J. ROSS. Postglacial drainage changes in the Darnley Bay area, N. W. T., Canada. (Association of Pacific Coast Geographers. Yearbook, 1953. v. 15, p. 17-22, 2 text maps) 13 refs.

Contains discussion of drainage changes in the basins of the Brock, Hornaday, and Horton Rivers, based on field work in summer 1951 and photointerpretation. "The drainage systems of the Brock and Hornaday Rivers have been established by stream capture. The rivers in the . . . region have eroded post-glacial gorges up to 400 feet deep since deglaciation. The bottoms of many drained lakes may be broken up into rectangular polygons. A few new lakes form by the melting of ground ice." The Horton River may formerly have emptied into Harrowby Bay (a part of Liverpool Bay) about 25 airline miles northwest of the present mouth. *Copy seen:* CaOGB.

36022. MACKERSEY, IAN, 1925- . Rescue below zero. London, R. Hale [1954]. 155 p. illus. *Also pub.* New York, W. W. Norton, 1954. 214 p. 26 illus. on plates. maps on endpapers.

Contains popular account of preparations made by the R. A. F. in spring and summer 1952 to supply the British North Greenland Expedition; the airlift by flying boat from Young Sund to Britannia Lake, East Greenland, for 17 days in Aug.; and supply of the Northice wintering station on the inland ice (78°07' N. 38°10' W.) by Hastings aircraft operating from Thule air base, North Greenland. Sept. 15-16. The Hastings crashed with its 12-man crew on Sept. 16 at Northice during a supply drop to the six-man party there (led by C. J. W. Simpson). The period from Sept. 16 until rescue by the U. S. Air Force on Sept. 25 is described.

36026. MACMILLAN, NORMAN, 1906- Equip air squadrons for the frigid zones. (Flight, Apr. 25, 1940. v. 37, no. 1635, p. 376-78, illus.)

Urges the British Air Ministry and aircraft industry to develop techniques which will enable the Royal Air Force to operate in frigid zones. States that "the R. A. F. has no mobile squadrons for operation in sub-Arctic conditions. It never has had any. It has had no call for any before this war." Some requirements for aircraft and personnel are noted. Experimental Russian air encampments on the polar ice are discussed briefly, and conclusion offered that the U.S.S.R. might have some idea of trans-oceanic air attack across the Arctic Basin.

Copy seen: DLC.

36027. MACMILLAN, NORMAN, 1906- North polar strategic cartography. (Aeronautics, London, Sept. 1953. v. 29, no. 2, p. 84-87, diags.) Digested by *Military review*, Feb. 1954. v. 33, no. 11, p. 71-78.

Presentation of a new form of north polar map drawn on the Mercator projection but with an artificial equatorial base. The "Rotated Mercator" projection can be used for navigation since all great circles show longitude and provide straight datum lines. The projection clearly shows the opposed land masses and the relationship between bases and industrial areas on either hand. The strategic military situation of Canada and the United States relative to that of the Soviet Union is discussed on the basis of aerial considerations in the north polar regions. Ice islands are considered as factor in this situation.

36029. MacNEISH, JUNE HELM, Mrs. Contemporary folk beliefs of a Slave Indian band. (Journal of American folklore, Apr.-June 1954. v. 67, no. 264, p. 185-98)

Contains folklore material from one of the "bush" band of the Slave Indians of the Mackenzie River region, collected by the writer and T. Carterette in 1951-1952. Includes material on beliefs in *naka* (bush people, "spies"), blood and hunting injunctions, burial practices, beliefs in ghosts and guardian spirits, popular medicine and shamanism, conceptions of supernatural animals, four tales, and miscellaneous folklore.

Copy seen: DLC.

36030. MacNEISH, R. S. The Pointed Mountain site near Fort Liard, Northwest Territories, Canada. (American antiquity, Jan. 1954. v. 19, no. 3, p. 234-253, graphs, 3 plates) 25 refs.

Contains report of results of an excavation made in 1952 near the juncture of the Petitot and Liard Rivers, 60°14' N. 123°38' W., Mackenzie District. Description is given of the excavated artifacts: a large number of lamellar flakes, burins, snub-nosed end-scrapers, and a series of large bifaces, estimated to be about 4,000 to 8,000 years old. It is concluded that the Pointed Mountain site was a workshop as well as a habitation area. Distribution of similar artifacts in Northwest Territories, Alaska, British Columbia, Trans-Baykal and Mongolia is traced. This cultural pattern seems to be distantly related to the Paleo-Eskimo culture and may have developed from some as yet undefined early (Mesolithic) Paleo-Siberian cultural complex.

36031. McTAGGART, KENNETH CUNNINGHAM, 1919- . Keno and Galena Hills, Yukon. Ottawa, 1950. 2 fold. maps, 46 x 35 in., with brief text. (Canada. Geological Survey. Paper 50-20) 3 refs.

Contains maps in scale 1 in.: 1000 ft. (1:12,000) covering 63°54'-59' N. 135°05'-20' W., and 63°52'-58' N. 135°19'-35' W., regions about 220 miles north of Whitehorse. Rocks are late Precambrian schists and quartzites, Devonian or later greenstones, and Jurassic or later fine-grained granite and rhyolite sills. Glacial drift covers the area. Important lead-silver ores (galena, gray copper, sphalerite) occur as fillings along northeast-striking faults in the quartzite and in the quartzite-schist contacts. Mines are listed.

Copy seen: DGS.

36032. MeVICAR, DONALD. The Crimson Route; there are exciting pos-

sibilities in the Great Circle Route from western Canada to the United Kingdom. Here the story of this secret airway is told for the first time by the pilot who pioneered it. (Canadian aviation, Sept. 1945. v. 18, no. 9, p. 44-47, 88, 92, illus. incl. map)

The author describes how he and two others explored the route from western Canada to Prestwick, Scotland via Le Pas - Churchill, Manitoba - Coral Harbour, Southampton Island - Fort Chimo, Quebec - Frobisher Bay, Baffin Island. In addition, three bases were selected at strategic spots in Greenland, known by the code name "Crimson Route" for security reasons. The airway originated in 1940. Total mileage is 4399 and flying time is 26 hours, 14 minutes, almost 1000 statute miles shorter than the more southerly routes. The author attempts to show the merits of the route for commercial exploitation, on the basis of his operation with an experimental freight schedule using a Hudson aircraft.

Copy seen: DLC.

36033. McWETHY, R. D. The arctic submarine. (United States Naval Institute. Proceedings, Sept. 1952. v. 78, no. 9, p. 954-57, illus.)

Contains discussion of the problems and possibilities of under-ice operations. Limitations of present ice-breakers, and the thickness and extent of the polar ice pack in summer and winter are discussed in relation to submarine operation. Even in winter some water exists, and if no natural opening can be found, explosive charges against the underside of thin smooth ice should be successful in opening leads. Future under-ice submarines should also have a mechanism capable of boring up through 15 ft. of ice. Problems of navigation are noted. Such submarines would be of value in collecting weather data, providing rescue facilities, and as navigation beacons for aircraft; also in establishing and supporting temporary air bases, weather stations, and radio beacons on the ice pack, and in oceanographic research. In time of war, submarines could prey on arctic shipping, carry out summer reconnaissance along arctic sea routes, and act as radar pickets.

36035. MADDOCK, CHARLOTTE LANDIS, 1897-, and others. Effect of hypervitaminosis A on the testes of the rat. (Archives of pathology, Oct. 1953. v. 56, no. 4, p. 333-40, illus., tables) 6 refs. Other authors: J. Cohen and S. B. Wolbach.

Weanling rats fed moderate doses of vitamin A for long periods showed degenerative lesions of the testes; mature animals similarly fed developed no such changes. Vitamin E given concurrently with Vitamin A increased the degenerative changes. *Copy seen:* DSG.

36036. MADDREN, ALFRED GEDDES. The beach placers of the west coast of Kodiak Island, Alaska. (In: U. S. Geological Survey. Mineral resources of Alaska in 1917. Bulletin, 1919, no. 692, p. 299-319, fold. map)

Contains the results of a field investigation, made in 1917 by the author, of the beach placers of the west coast of Kodiak Island, in southwestern Alaska. Covers the geography, geology, and mining methods. The general features of the beach deposits, the derivation of the beach placers, the concentration of the beach placers, and the placer minerals (magnetite, pyrite, chromite, gold, and a little platinum) are described.

Copy seen: DLC.

36038. MADDREN, ALFRED GEDDES. Gold placer mining developments in the Innoko-Iditarod region. (In: U. S. Geological Survey. Mineral resources of Alaska in 1910. Bulletin, 1911, no. 480, p. 236-70, fold. map)

Presents the results of a geologic investigation of this region between the central lower courses of the Yukon and Kuskokwim Rivers in west-central Alaska. Description in considerable detail of the geographic features is followed by an geologic sketch of the region, and then by a detailed discussion of the origin of placer gold and the occurrence and distribution of the gold placers in the Innoko and Iditarod districts, and the mining developments.

Copy seen: DLC.

36039. MADDREN, ALFRED GEDDES. Gold placers near the Nenana coalfield. (In: U. S. Geological Survey. Mineral resources of Alaska in 1916. Bulletin 1918, no. 662, p. 363-402)

Presents the results of a geologic field investigation in 1916, by the author, of the gold placer deposits of the Nenana district ("Bonnifield region") in the northern foothills of the Alaska Range, along the southern border of the Tanana valley, around longitude 148° W. and latitude 64° N. A brief description of the geography of the district is given, but most of the article is devoted to detailed descriptions of the gold placers of the Nenana valley, Totatlanika basin, and Tatlanika and Gold King Creeks.

Copy seen: DLC.

36040. MADDREN, ALFRED GEDDES. Gold placers of the Innoko district. (In: U. S. Geological Survey. Mineral Resources of Alaska in 1908. Bulletin, 1909, no. 379, p. 238-66)

Contains the results of a geographic and geologic study of the gold placers of this region between the central lower courses of the Yukon and Kuskokwim Rivers. Data on history of mining developments, description of the placers, methods of working, source of the placer gold, and the gold production are included. cf. author's bulletin on the area listed as Arctic Bibliography, No. 10698.

36041. MADDREN, ALFRED GEDDES. Gold placers of the lower Kuskokwim, with a note on copper in the Russian Mountains. (*In: U. S. Geological Survey. Mineral resources of Alaska in 1914. Bulletin, 1915, no. 622, p. 292-360, fold. map*)

Contains the results of a field investigation in 1914, by the author, of the mineral resources and geology of that portion of the Kuskokwim region from the Iditarod gold placer district to the gold placers of the Aniak and Tuluksak Rivers. Describes the general geography of the region and discusses the mineral resources in detail. Gives an historical outline of mining developments in this region and a statement of economic conditions. Discusses the general distribution of the gold, lode deposits and the coal prospects. Summarizes the general character of the mineralization and offers suggestions to prospectors. Describes in detail the gold placer deposits of the Tuluksak-Aniak region, with shorter descriptions of the gold placers of the middle Kuskokwim River, the placers southwest of the Tuluksak-Aniak region, those of the Goodnews district, and the beach placers of Togiak Bay. Includes also a description of the copper deposits of the Russian Mts.

Copy seen: DLC.

36042. MADDREN, ALFRED GEDDES. Gold placers of the Ruby Creek district. (*In: U. S. Geological Survey. Mineral resources of Alaska in 1908. Bulletin, 1909, no. 379, p. 229-33, fold. map*)

Contains geographic and geologic sketches of the Ruby Creek area, a description of the gold placer deposits, and of the mining developments in the district in 1908. Occurrence of gold-bearing quartz lenses and stringers on Flat Creek noted. *Copy seen:* DLC.

36043. MADDREN, ALFRED GEDDES. The Koyukuk-Chandalar gold region. (*In: U. S. Geological Survey. Mineral resources of Alaska in 1909. Bulletin, 1910, no. 442, p. 284-315, fold. map*)

Contains the results of exploration in the Koyukuk-Chandalar region in the summer of 1909. Describes the various geographic features of the region, costs and wages, progress of mining, gold production; and discusses the geology and the source of the placer gold. After a general statement as to the mineral resources, detailed descriptions are given of the placer gold deposits of the North

Fork, Middle Fork, and South Fork of the Koyukuk River, the John River, and the Chandalar River. Author's bulletin on this region is *Arctic Bibliography No. 10699*.

Copy seen: DLC.

36044. MADDREN, ALFRED GEDDES. Mineral deposits of the Yakataga district. (*In: U. S. Geological Survey. Mineral resources of Alaska in 1913. Bulletin, 1914, no. 592, p. 119-53, fold. map*)

Presents results of the author's field investigation of this district (approx. 60° N. 141°40' to 143°20' W.) in southern Alaska in 1913. The topography, climate, vegetation, harbors, and transportation facilities, and the Tertiary and Quaternary geology of the district are described. Fossils collected at numerous localities are itemized. Descriptions are given of the placer gold, petroleum, and coal deposits.

Copy seen: DLC.

36045. MADDREN, ALFRED GEDDES. Placers of the Gold Hill district. (*In: U. S. Geological Survey. Mineral resources of Alaska in 1908. Bulletin, 1909, no. 379, p. 234-37*)

Contains geographic and geologic sketch of the Gold Hill district in the central Yukon Valley, about 25 miles below the Tanana River mouth, and a description of placer gold mining developments in 1907-1908. Probably the first attempt in the interior of Alaska was made about 1890 on a gold-bearing quartz vein in Gold Hill.

Copy seen: DLC.

36046. MADDREN, ALFRED GEDDES. The Ruby placer district. (*In: U. S. Geological Survey. Mineral resources of Alaska in 1911. Bulletin, 1912, no. 520, p. 287-96, fold. map*)

Describes the geography, geology, and placer gold deposits of the Ruby district on the south side of the Yukon River in west-central Alaska, and the mining developments in the district from the discovery of placer gold there in 1907 through 1911.

Copy seen: DLC.

36047. MADDREN, ALFRED GEDDES. Sulphur on Unalaska and Akun Islands and near Stepovak Bay, Alaska. (*In: U. S. Geological Survey. Mineral resources of Alaska in 1917. Bulletin, 1919, no. 692, p. 283-98, fold. map, sketch maps*)

Presents the results of a field investigation, made by the author in 1917, of

sulphur deposits in the Aleutian Islands (in the crater of Makusin Volcano on Unalaska Island, and on Akun Island) and on the Alaskan Peninsula near Stepovak Bay. Describes the geographic and geologic occurrence of the sulphur deposits, their origin, amount and possibility of economic development.

36048. MADSEN, FLEMMING. United Nations of the air. (Danish Foreign Office journal, Mar. 1954. No. 11, p. 1-4, 4 illus., text map)

Contains brief description of the organization and administration of Scandinavian Airlines System, cooperation between Norway, Denmark and Sweden, and the pioneer transpolar flights of the Viking airliners between Los Angeles and Scandinavia, via Thule, northern Greenland.

Copy seen: DLC.

36049. MAGIDOVICH, I. P. Izvestnye russkie moreplavatel'i; spravka. (*In:* Lupach, V. S. Russkie moreplavatel'i, 1953, Prilozhenie 1, p. 473-577) Text in Russian. *Title tr.:* Renowned Russian navigators; a guide.

This is a comprehensive and valuable source of information on the exploration of the world in general and particularly of the arctic regions. It is an alphabetical list of 492 Russian navigators of repute, including heads of expeditions, ship commanders, officers, scientists, geographers, hydrographers, and other participants who wrote narratives or scientific papers as results of expeditions. Each entry includes a biographical sketch of the subject, data on his travels, geographical discoveries and professional or scientific activities.

Copy seen: DLC; MH.

36050. MAGIDOVICH, I. P. Petr Kuz'mich Krenitsyn i Mikhail Dmitrievich Levashev. (*In:* Lupach, V. S. Russkie moreplavatel'i, 1953, p. 111-24) Text in Russian. *Title tr.:* Petr Kuz'mich Krenitsyn and Mikhail Dmitrievich Levashev.

Contains data on the organization and preparation of the expedition of 1764-70,

under Capt. P. K. Krenitsyn on the ship *Sv. Pavel*, assisted by Capt.-Lt. M. D. Levashev, in command of the *Sv. Ekaterina*, which in 1768-70 explored the Kuril Islands, Alaska Peninsula and the Aleutians. Important geographic and ethnographic materials were collected and the Krenitsyn Islands in the Aleutians were discovered.

36053. MAGRINI, A., and V. GIUNTI. Alcune considerazioni sull' allergia "a frigore." (Giornale di clinica medica, May 1948. anno 29, p. 435-41) 21 refs. Text in Italian. Summary in Esperanto. *Title tr.:* Some considerations on allergy "a frigore."

Following notes on earlier studies on the problem, a detailed case history of a girl, age 16, suffering from cold urticaria, is presented and discussed.

Copy seen: DSG.

36054. MAHAFFY, R. U. The new North [1]: the Yukon and Northwest Territories. (Canadian mining journal, Oct. 1954. v. 75, no. 10, p. 64-67, 5 illus., text map, table)

First (general) article in a series on mineral resources and mining in the Yukon Territory, Mackenzie, Keewatin, and Franklin Districts. Mapping and mining development to date are considered; the possibilities and problems of the entire region are discussed in relation to climate, permafrost, mineral resources, topography, and transportation. Granting of mining concessions to large companies and to individual prospectors is described.

Copy seen: DGS.

36055. MAHAFFY, R. U. The new North [2]: exploration and production in Yukon Territory. (Canadian mining journal, Nov. 1954. v. 75, no. 11, p. 77-83, 4 illus., 2 text maps) ref.

Second in a series of articles. Yukon mineral production since 1946 has been characterized by greater emphasis on silver and base metals, less on placer gold. Most silver-lead-zinc production comes from the Keno Hill region east of Dawson. Importance of the Alaska Highway and recent construction of all-year roads, climate, and hydroelectric development are discussed. Exploration, discoveries, and development in 1953 and 1954 are described in some detail, and working companies listed. The projected northern B. C.—southern Yukon power project will be of considerable significance to base metal developments.

Copy seen: DGS.

36056. MAHAFFY, R. U. The new North [3]: pronounced mining activity in the Mackenzie District. (Canadian mining journal, Dec. 1954. v. 75, no. 12, p. 61-68, 5 illus., 3 tables) 2 refs.

Third in a series of articles. Some factors influencing mining development in Mackenzie District are examined: road, river and air transport; geologic mapping; transportation costs; development of cheap hydro-electric power; mine operating costs. Exploration for uranium and oil 1953, gold production 1953, exploratory drilling for lead and zinc at Pine Point (Great Slave Lake) are discussed, as well as federal administration of the region by the Dept. of Northern Affairs and National Resources.

Copy seen: DGS.

36057. MAHAFFY, R. U. The new North [4]: the districts of Keewatin and Franklin. (Canadian mining journal, Jan. 1955. v. 76, no. 1, p. 65-68, illus., text map)

Fourth and last in this series of articles. Most advanced project in Keewatin is the North Rankin Nickel Mines Development on the west coast of Hudson Bay (62°45' N. 92° W.) where developed ore reserves are estimated at 460,000 tons averaging 3.30 percent nickel and 0.81 percent copper per ton. Exploration for nickel at Ferguson Lake (100 miles west of Rankin Inlet), for iron in the Belcher Islands of eastern Hudson Bay, and the sea and air transportation of the region are noted. Actual development of prospects in northern Keewatin and the Arctic Archipelago will depend on defence needs. A gypsum plug on Ellef Ringnes, probably underlain by salt, is described; oil may be associated with similar structures in the Melville Island - Ellef Ringnes - Axel Heiberg region. Iron and semi-precious stones on Baffin Island and oil and gas on Cornwallis Island are also possibilities. Members of the advisory committee on northern development set up by the Canadian Government in 1953 are listed.

36061. MAĬNOV, I. I. Někotoryâ dannyiâ o tungusakh Ĭakutskago kraia. Irkutsk, 1898. 214 p. tables, part fold., 2 plates. (Vsesoiŭznoe geograficheskoe obshchestvo. Vostochno-Sibirskii otdel. Trudy, no. 2) Text in Russian. *Title tr.:* Some data on Tungus of the Yakut country.

Monograph based on archival materials of the Russian administration and church, and on the author's field work. Vital statistics of Tungus in the districts of Olekminsk and Yakutsk (some as old as 1730) are given, including data on birth, mortality, marriage, epidemics, emigration, etc. Physical characteristics of the Tungus are investigated (p. 66-120), on the basis of data from literature and from the writer's own survey of about 500 individuals. Measurements of height, chest circumference, form of skull and face are discussed. Results of Maĭnov's two trips to the Tungus in 1894-1896, in connection with the Sibirâkov Yakutia Expedition are reported: one to Ulanakh (p. 121-57) and the other to Kangelass on the Lena (p. 157-214). The occupation and economic conditions among these people, their agriculture and reindeer breeding, dwellings, etc. are described; Yakut influence and competition with the Tungus for pastures between the Lena and Amga are noted; Tungus children and attitude of natives toward marriage, relations with the Russian administration, etc., are sketched.

Zapiski, t. 12) about 50 refs. Text in Russian. *Title tr.:* The Russian peasants and settled natives in the Yakutsk region.

A monograph on the population and economy of Yakutia, based on archival materials, statistical surveys and on the literature. Russian colonization of the region is reviewed. The anthropological characteristics of the population in the districts of Amgin, Yakutsk and Olekminsk are sketched, and some vital statistics and comparative data given on Yakuts and Tungus. Settlements of

Yakuts in the district of Olekminsk, their number, social organization, transition from nomadism to a settled mode of life are outlined (p. 79-113). The Yakuts' struggle for their rights to their fertile soil and good meadows against the intruding Russian peasantry, their agriculture, and animal breeding in these districts are described. Other aspects of economic life, administrative measures to assure colonization, the situation in regard to credit and taxes, the hunting and fishing trades, also other, secondary occupations, the problem of schools and education are discussed; a chapter is included on the *skopsy* (a sect practicing castration). *Appendices* give statistics on the Russian and Yakut population in the districts of Yakutsk and Olekminsk and the economic conditions in 1893-1902.

36063. MAIR, W. W. The wolf and predator control in the Canadian Arctic. (Arctic circular, Dec. 1954. v. 7, no. 4, p. 40-50, table) 3 refs.

Contains text of talk by the Chief, Canadian Wildlife Service, to the Arctic Circle, Ottawa, Nov. 3, 1954. Fluctuation of the wolf population in Alaska and northwestern Canada is discussed on the basis of wolf pelt returns 1860-1893, reports of travelers, and studies in Wood Buffalo Park 1951-1952. Size of the packs, reaction of prey species, and hazard to humans are briefly dealt with. Methods of wolf control and place of the predator in nature are discussed. The bounty system and its defects are analyzed; a government control system is advocated, utilizing poison, also professional predatory animal hunters.

Khabarovsk - Blagoveshchensk, "Knizhnoe delo", 1928. 69 p. illus., plates. Text in Russian. *Title tr.*: In the country of hunting and volcanoes; travels and adventures in Kamchatka. Translated and revised from Swedish by M. Zh-evskii with the collaboration of the author.

During the period of political conflict for control of Kamchatka, the author, a Swedish zoogeographer, obtained permission to sojourn in the region of the Kronotskiy preserve. His three-man party came from Petropavlovsk on an American schooner, landed in Olga Bay and wintered 1922-23. The difficulties of landing, adventures and hunting (bears, wolves, deer, foxes, sabres), a dog-sledge trip to the hot springs (p. 21-27), snow storms, the earthquake of Feb. 2, 1923, in which almost all the party's equipment and provisions were

lost (p. 42-48), rescue by a motorboat, visit to sea-lion rookeries (p. 52-60), etc., are recounted, with photo. illus. of landscape, volcanoes and wildlife.

36081. MANNING, THOMAS HENRY, 1911- . Defence Research Board's 1953 Banks Island Expedition. (Arctic circular, Feb. 1954. v. 7, no. 2, p. 11-15, text map) ref.

Contains chronological account of expedition made by the author and I. M. Sparrow, May 10-Sept. 11, 1953, a continuation of 1952 attempt to circumnavigate Banks Island by canoe (Arctic Bibliography No. 30623, 30678). Birds and mammals were studied and collected, a physiographic study made, and two Eskimo houses (Thule culture) excavated in the Cape Kellett region, May 10-June 28. Between June 28 and July 15 the party traveled overland to Thomsen River on the north coast where canoe and supplies had been left in 1952; and July 19-Sept. 11 they went by canoe from Thomsen River south and east along the coast and through Prince of Wales Strait to Holman Island in southeast Victoria Island. Notes were made on the coastal features, and about 350 photographs taken to show topographic detail. 192 bird and

212 mammal specimens were obtained for the National Museum of Canada.

Contains short description of Thule-type house ruins seen by the writer in 1946 on the small islands Patterson, McCormach, and Elsie, and also at Port Harrison on the mainland. In emendation of remarks from his 1944 trip (Arctic Bibliography, No. 10888), he states "not only are these house ruins on this coast, but they appear to be quite numerous."

Copy seen: DLC.

36083. MANNING, THOMAS HENRY, 1911- . Remarks on the reproduction, sex ratio, and life expectancy of the varying lemming, *Dicrostonyx groenlandicus*, in nature and captivity. (Arctic, June 1954. v. 7, no. 1, p. 36-48, 7 tables) 32 refs.

Contains results of a study between Sept. 1949 and Sept. 1953, of a colony started from 16 Greenland varying lemmings and one Mackenzie varying lemming (*D. g. kilangmiutak*). Records of the colony are compared with field observations and more detailed work done on related genera. Subjects discussed include: age of sexual maturity, litter size, gestation period and litter frequency, sex ratios, care of young, life expectancy and disease.

36084. MANNING, THOMAS HENRY, 1911- , and others. The voyage of C. G. M. V. *Nauja* to Foxe Basin in 1949. Ottawa, Apr. 1950. 2 v.: 160 p., 180 p. approx. 350 illus., tables. 7 refs. Other authors: C. Merrill, D. Coombs, and A. H. Macpherson.

Unpublished report to the Geographical Branch of the Canadian Dept. of Mines & Technical Surveys, on the seven-man expedition (led by T. H. Manning), June 13-Oct. 10, 1949. Starting from Moosonee, the *Nauja* visited islands in James Bay, and proceeded along the east coast of Hudson Bay to Foxe Basin, returning by way of the west coast to Churchill. Continuous soundings were taken for about 3,000 of the 4,000 mile voyage, 42 landings were made for scientific work, physiographic observations were made, 21 astronomical fixes and 82 sets of readings for determination of

magnetic declination were taken, and time of high tide and tidal range were determined for many places. Rocks and fossils, 25 archeological specimens, 350 bird and 240 mammal specimens, 79 lichen samples, and over 3,000 sheets of plants were collected. Ectoparasites from about 30 hosts, and 57 numbered insect samples were obtained. Clothing was tested for the Defence Research Board of Canada. The text volume contains: a journal of the trip (p. 1-32); description of the *Nauja*, operation of her engines, radio equipment and depth recorder, data on food purchased and used, also recommendations on such for similar trips (p. 33-54). Preliminary notes on birds seen and collected at Moose River mouth, James Bay islands, Hudson Bay and Foxe Basin are given (p. 55-120); also notes on mammals (p. 121-45), and archeology: Eskimo stone houses in Foxe Basin and on Smith Island (p. 146-58). Vol. 2 contains photographs arranged in chronological order.

36086. MANSOUR, TAG E., and W. F. HEWITT, Jr. Sensitivity to insulin during adrenocortical response to cold stress in rats. (Endocrinology, Jan. 1954. v. 54, no. 1, p. 20-25, illus., tables) 16 refs.

Contains a report on experiments with rats exposed to 5° C. for one, six or nine days. Blood sugar changes due to insulin were measured before and after exposure, and the response of the adrenals was determined by measurement of adrenal cholesterol, ascorbic acid and the ratio of adrenal weight to body weight.

The results suggest a lack of direct correlation between corticoadrenal activity and sensitivity to insulin.

On the basis of clinical observations and studies on infants and animals, the authors maintain "that the acute hydrocephalus, with intensive bulge of the fontanel, produced by the rapid absorption of vitamin A, is a transitory and harmless disorder in both its immediate and its remote prognosis." To avoid complications due to excessive vitamin A intake, the authors recommend a preparation with 70,000 units of this drug and 2 mg. of vitamin D.

36099. MARININ, D. N. Zimnie posevy drevesno-kustarnikovykh porod. (Lesnoe khoz'f'lstvo, Jan, 1954. v. 7, no. 1, p. 84-86, table, illus.) Text in Russian. **Title tr.:** Winter sowings of trees and shrubs.

Since 1948, the nursery at Mytsihehi (Moskva province) has been experimenting to improve seed germination and quality of seedlings by winter sowing in snow, of pine, spruce, birch, Siberian larch, and other trees and shrubs. The results have exceeded those expected from spring or fall sowing. Methods of preparing the ground, sowing in snow and of protecting the sown seeds from excessive frost are described. Results of 1952 sowing are summed up in a table.

36103. MARKOV, SERGEĬ, I. Kolumby Rossiiskie; k istorii "Rossiisko-Amerikanskoi kompanii". (Sovetskoe kraevedenie, June 1936, no. 6, p. 48–58) Text in Russian. *Title tr.:* Russian Columbus; contribution to the history of the Russian-American Company.

Notes on the history of Russian possessions in America, based chiefly on archives of Mikhail Matveevich Buldakov, son-in-law of Shelekhov, father-in-law of Rezanov, and during 1799?–1828 the First Director (pervstvuiushchii direktor) of the Russian-American Company. The activities of the company and of its chiefs (Shelekhov, Baranov, Rezanov, Kuskov, Gagenmelster) are characterized by quotations from documents, letters, diaries and account-books found in the archives. Its decline and downfall is attributed to mismanagement and to mistaken policy toward the Alaskan natives. The need to compile a complete history of the Company, as suggested by M. Gorki, is stressed.

36112. MARSHALL, ROBERT, 1901-1939. Reconnaissance of the northern Koyukuk valley. Washington, D. C., U. S. Govt. Print. Off., 1934. ii, 247-56 p., fold. map. (U. S. Geological Survey. Bulletin 844-E. Mineral resources of Alaska, 1931)

Presents a summary of data regarding the physical features of the upper Koyukuk basin based largely on observations made by the author while engaged in the study of tree growth at its northern limit. Foreword by Philip S. Smith. The region reported is that north of the Arctic Circle, drained by the three forks (North, Middle, South) of the Koyukuk, and by their tributaries. *Sketch map*, 1:500,000, shows the names (local usage) of these streams, many so mapped for the first time here. The drainage, mountains, nomenclature of the physical features, and the population and settlements of the region are described.

36117. MARTIN, FREDRIK ROBERT, 1868-1933. Sibirica; ein Beitrag zur Kenntnis der Vorgeschichte und Kultur sibirischer Völker. Stockholm, Gustaf Chelius, 1895-1897. 4 p. l., 41, [3] p., 1, 35 l., 98 text illus., 35 plates in album. (Die Sammlung F. R. Martin) Text in

German, translated from the Swedish by C. O. Nordgren. Published with the support of the Swedish government. **Title tr.:** Sibirica; a contribution to knowledge of the prehistory and culture of the Siberian peoples.

Contains (p. 1-28) account of a trip to the Ostyaks on the Yugan River, June-Aug. 1891, sponsored by the Swedish Society of Anthropology and Geography. The Ostyaks in the vicinity of Yuganskoye were investigated, anthropological measurements were made, museum objects of their material culture acquired, and old graves investigated. The writer made a boat trip to Surgut, another some 130 versts up the river from Yuganskoye, and investigated about ten Ostyak settlements. He also visited the Ostyak sacrificial and burial place on Cedar Island in the Ob' (about 20 versts southeast of Surgut); he excavated around a hundred old graves in the former Ostyak stronghold some 12 versts west of Surgut, where numerous potsherds, weapons and ornaments were found. Ostyak dwellings, clothing, preparation of food, dances and pantomimic games, musical instruments, etc., are described, also a woman's grave, well-preserved, with numerous utensils and implements placed by the corpse; notes are given on hunting and trading, idols, etc. The ethnographic artifacts brought home and preserved at State Museum in Stockholm are illustrated (plates 1-21) with detailed explanations. The remainder of the text and plates 22-35 deal with bronze age of Minusinsk.

36118. MARTIN, GEORGE CURTIS, 1875-1943. The Alaska coalfields. (In: U. S. Geological Survey. Mineral resources of Alaska in 1906. Bulletin 1907, no. 314, p. 40-46, fold. map)

Contains a description of the distribution and extent of the various coal-bearing areas (map and table), the geology of the various coal-bearing rocks (Carboniferous, Jurassic, Cretaceous and Tertiary), and the occurrence of the coals of the Pacific Coast region, Interior region, and the Bering Sea and Arctic Slope regions. The characters of the various coals are discussed (with analyses given) and the developments and production summarized.

Copy seen: DLC.

36119. MARTIN, GEORGE CURTIS, 1875-1943. Bering River coalfield. (In: U. S. Geological Survey. Mineral

resources of Alaska in 1904. Bulletin, 1905, no. 259, p. 140-50, maps, diagr.)

Contains a description of the geology of the coalfield (approx. 60°30' N. 144° W. southern Alaska), the coal seams, the character of the coal (with analyses), and the development of the coal deposits. Facts other than economic are given in U. S. Geological Survey Bulletin 250, 1905. (Arctic Bibliography, No. 10996).

Copy seen: DLC.

36120. MARTIN, GEORGE CURTIS, 1875-1943. The Cape Yaktag placers. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1904. Bulletin, 1905, no. 259, p. 88-89)

Describes the occurrence of gold in the beach sands near Cape Yakataga (60°01' N. 142°23' W. on the south Alaska coast). The gold is believed to have been concentrated by wave action from the glacial morainic material brought to the coast by the Bering Glacier from the metamorphic and crystalline rocks of the St. Elias Range.

Copy seen: DLC.

36121. MARTIN, GEORGE CURTIS, 1875-1943. Distribution and character of the Bering River coal. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1905. Bulletin, 1906, no. 284, p. 65-77, geologic section, map, folded map)

Contains an areal and geologic description of the folded Tertiary Bering River coalfield with its anthracite and semi-anthracite or semi-bituminous coking coals (analyses given), and data on mining, transportation, and markets. cf. Arctic Bibliography, No. 10990, author's bulletin on the area. *Copy seen:* DLC.

36122. MARTIN, GEORGE CURTIS, 1875-1943. Geologic problems at the Matanuska coal mines. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1917. Bulletin, 1919, no. 692, p. 269-82, diagrs.)

Describes the general geology and mining developments in recent years of the coal deposits on Eska Creek, Chickaloon River, and Moose Creek in the Matanuska coal field. Notes an occurrence of lignite near Houston on the Little Susitna River.

Copy seen: DLC.

36123. MARTIN, GEORGE CURTIS, 1875-1943. Gold deposits of the Shumagin Islands. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1904. Bulletin, 1905, no. 259, p. 100-101)

Contains descriptions of the gold lodes of the Apollo Consolidated and King mines on Unga Island, and the Sand Point gold-bearing beach placers on Popof Island (approx. 55° N. 160° W. south of Alaska Peninsula). The Unga Island lodes occur in fracture zones in dacite and andesite, and contain free gold, pyrite, galena, sphalerite, chalcocopyrite, and native copper, with quartz, calcite, and orthoclase. *Copy seen:* DLC.

36124. MARTIN, GEORGE CURTIS, 1875-1943. Gold lodes in the upper Kuskokwim region. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1920. Bulletin, 1922, no. 722, p. 149-61, 3 maps, incl. 1 fold.)

Summarizes the discovery and development of the region, and cites sources of information. Describes the geographic environment, access and settlements, relief and drainage, vegetation, animals, climate, geology, and mineral resources: gold lodes and placers.

Copy seen: DLC.

36125. MARTIN, GEORGE CURTIS, 1875-1943, and J. B. MERTIE, Jr. Mineral resources of the upper Matanuska and Nelchina valleys. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1913. Bulletin, 1914, no. 592, p. 273-99, fold. map)

Presents results of the authors' field investigation in 1913 of the headwater regions of the Matanuska and Nelchina Rivers in south-central Alaska south and east of the Talkeetna Mts. (approx. 62° N. 147°-149° W.). Transportation routes to and in the region are considered. A short description of the timber resources is given, and a brief statement of the geology, with a table showing the general stratigraphic sequence presented. The mineral resources are placer gold, copper, and coal. The general relations of the metalliferous deposits are discussed and the placer gold and copper deposits described. The areal distribution of the coal (anthracite and bituminous) deposits is given and the stratigraphic occurrence discussed. Many coal sections are given and the character of the coals described with three analyses. Mining conditions are considered, together with probable effects of folding, faulting, igneous intrusions, underground water and gas.

36126. MARTIN, GEORGE CURTIS, 1875-1943. Notes on the petroleum fields of Alaska. (*In: U. S. Geological Survey. Mineral resources of Alaska in 1904. Bulletin, 1905, no. 259, p. 128-39*)

Contains results of the 1904 fieldwork as to the geologic occurrence of the petroleum deposits of the Controller Bay, Cook Inlet, Gold Bay and other possible petroleum fields on the Pacific Coast of Alaska, and the progress in their development.

Copy seen: DLC.

36127. MARTIN, GEORGE CURTIS, 1875-1943, and F. J. KATZ. Outline of the geology and mineral resources of the Iliamna and Clark lakes region. (*In: U. S. Geological Survey. Mineral resources of Alaska in 1909. Bulletin 1910, no. 442, p. 179-200, fold. map, diagr.*)

Contains the results of studies in 1909 of the geology and mineral resources of the Iliamna-Lake Clark region of southwestern Alaska, west of Cook Inlet and north of the Alaska Peninsula. Describes the geographical features, climate and vegetation, settlements and transportation routes, geology, the mineral resources—copper, silver, gold lode and placers, and petroleum claims—and mining development.

Copy seen: DLC.

36128. MARTIN, GEORGE CURTIS, 1875-1943. The outlook for petroleum near Chignik. (*In: U. S. Geological Survey. Mineral resources of Alaska in 1923. Bulletin, 1925, no. 773, p. 209-213, fold. map*)

Presents the results of a brief field examination by the author in Aug. 1923 and the study of earlier publications on the geology of the Chignik district, on the east side of the Alaska Peninsula in southwestern Alaska, at about lat. 50° N., and southwest of Kodiak Island. Describes the geology (stratigraphy and structure) and concludes that the geologic conditions in the Chignik district are not favorable for the occurrence of oil.

Copy seen: DLC.

36129. MARTIN, GEORGE CURTIS, 1875-1943. Petroleum at Controller Bay. (*In: U. S. Geological Survey. Mineral resources of Alaska in 1906. Bulletin, 1907, no. 314, p. 89-103, map*)

Outlines the geology of the Controller Bay region and summarizes developments to 1906. Describes the occurrence of petroleum and lists the position and description of the wells. States principles governing the occurrence of petro-

leum and discusses the outlook for profitable exploitation. cf. Arctic Bibliography. No. 10990. Copy seen: DLC.

36130. MARTIN, GEORGE CURTIS, 1875-1943. Preliminary report on a detailed survey of part of the Matanuska coalfields. (*In: U. S. Geological Survey. Mineral resources of Alaska in 1910. Bulletin, 1911, no. 480, p. 128-38, fold. map, fold. structure sections*)

Presents briefly the important practical results of a detailed geologic investigation in 1910 of the area covered by the Chickaloon special map, which includes the commercially important part of the Matanuska coalfields in south-central Alaska. Describes the general geology of the region, the crystalline rocks and the Mesozoic sedimentary rocks beneath the coals, the Tertiary coal-bearing rocks, the intrusive rocks, and the Quaternary gravels which mask large bedrock areas. Discusses the coal stratigraphy, extent and structure of the coal areas, effect of intrusive rocks on the coal, and the character of the coal, with results of analyses and tests.

Copy seen: DLC.

36131. MARTIN, GEORGE CURTIS, 1875-1943. Preliminary statement on the Matanuska coal field. (*In: U. S. Geological Survey. Mineral resources of Alaska in 1905. Bulletin, 1906, no. 284, p. 88-89, map*)

Presents the results of a field investigation in 1905 by the author, of the geology of the Matanuska coalfield in south-central Alaska. Describes the geography and geology of the coalfield, and the area; distribution of the coal, its position, sections of the coal, its character, mining conditions, transportation and markets. cf. Arctic Bibliography No. 11000 for author's bulletin on this field work.

Toronto, Queen's Printer, 1953. 163 p. illus. incl. 18 plates, 5 maps (2 fold. in map vol.), cross-section (fold. in separate map pt. to v. 61), 6 tables. (Ontario, Dept. of Mines. Annual report, 1952. v. 61, pt. 6) 28 refs. *Other authors:* A. E. Wilson, W. S. Dyer, A. R. Crozier, W. Gerrie, N. Hogg, and J. Satterly.

Geological reconnaissance of the region between approx. 49°-53° N. 80°30'-87° W. in the drainage basins of the Atawapiskat, Albany, and Moose Rivers, was made by canoe and airplane in summer 1946, by N. W. Martison and J. Faber. In summers 1948-51 a diamond drilling program was carried out by the Ontario Dept. of Mines, under the supervision of N. Hogg (preliminary reports, *Arctic Bibliography*, No. 31107-31110). The first part of the present report consists of a description of stratigraphy, paleontology, structural geology,

and petroleum possibilities; appended is a report on fossil collections from the area by A. E. Wilson, and the original log (1930) and re-log (1931) of Onakawana drill hole by W. S. Dyer, A. R. Crozier, and W. Gerrie. In the second part, by N. Hogg, J. Satterly, and A. E. Wilson, the drilling at Campbell Lake, Jaab Lake, and Puskwuche (Piskoshi) Point and several points in Cochrane Twp., are described, with detailed logs of the holes. The region covered is underlain by Ordovician, Silurian, Devonian, and Lower Cretaceous limestones, dolomites, and shales covered by Pleistocene and Recent deposits. It forms a saucer-like basin against Precambrian rocks to the south and west. Although favorable reservoir rocks and suitable structures for retention of oil and gas exist, no evidence of gas, petroleum, or its residues was found.

36135. MARTYNOV, ANDREĬ VASIL'EVICH, 1879-1938. O mestonakhozhdenii permskikh nasekomykh voobshche i o znachenii mestonakhozhdeniia ikh na r. Soiane. (b. Arkhang. gub.). (Priroda, 1933, no. 5-6, p. 116-18, illus.) Text in Russian. **Title tr.:** On the occurrence of Permian insects in general, and on the importance of their deposits on the Soyana River (former Arkhangel'sk Government).

Contains a revision of work on fossil insects of Permian period, and data on the discovery by M. B. Edemskii in 1927, of very rich deposits of these insects on the Soyana River, a tributary of the Kuloj. Some statistical data and characteristics of the fauna are added.

36141. MASIK, ELISABETH. On the effect of cold on the peripheral blood picture of the infant; experimental investigations. Uppsala, 1948. 107 p. (Acta paediatrica, v. 35, suppl. 7) illus. tables, about 110 refs.

Contains a study on the effects of local or general cooling on the blood picture of infants (age: 12 days - 5.5 months) and guinea pigs. In the latter a drop in body temperature was accompanied by a fall of erythrocyte, hemoglobin and leucocyte values. In infants, a full cold bath caused a fall in erythrocyte and hemoglobin values, but in nearly all cases a rise in leucocytes; similar changes were observed upon local cooling except that there was no regular change in leucocytes. Ice-cold drink caused changes similar to those observed after local cooling, with the leucocyte values decreasing in most cases. Qualitative changes in the leucocytes are also discussed.

Liver slices from animals exposed to cold 1-2 days showed a much reduced ability to synthesize fatty acids from acetate, but became almost normal after five or ten days' exposure. The oxidation of acetate as shown by $C^{14}O_2$ production was not affected by an exposure to cold of 1-2 days but increased after 5-10 days' exposure. The effect on hepatic cholesterol was complex and equivocal.

36147. MATAMEK CONFERENCE ON BIOLOGICAL CYCLES, Matamek, Quebec, 1931. Proceedings. Washington, D. C. 1931? 297 p.

Following prospectus, etc., is text with discussion (in typescript) of 26 papers, of which the following deal rather more than others with wildlife in the North.

Elton, Charles Sutherland, 1900- . Cycles in the fur trade of Canada (p. 72-83). A study of the "big cycle of wild life which covers the forest belt of Canada," and its possible "nature and cause;" based on long records of the Hudson's Bay Co.

Hjort, Johan, 1869-1948. Whales and whaling (p. 100-117). An historical review, with information on the phylogeny of the whales; their food and migrations; history of whaling; stocks, their exhaustion and renewal, etc.

Townsend, Charles Haskins, 1859-1944. Whale fisheries (p. 118-23). An outline of modern methods of whaling and their depredation of the blue, and sperm whale.

Kellogg, Remington, 1893- . The Newfoundland whale fishery (p. 124-29). Following an introductory section on the factors affecting whale abundance and migration, data are presented on the whaling operations off Newfoundland for the period 1898-1929.

Kyle, H. M. Cod fisheries; life cycle and fluctuations (p. 188-206). The fishing areas (largely Arctic), biology of the cod, especially growth and spawning; fluctuations in catch, etc., are presented.

Elton, Charles Sutherland, 1900- . Epidemic disease in wild foxes and in sledge dogs (p. 241-45). Deals with an epidemic disease much resembling epizootic encephalitis of silver-fox farmers, its distribution, symptoms, cycles and their interdependence, epidemics in the Arctic, etc.

Appended are four fold. maps together with a printed Report 1932 (32 p.) on the conference by Ellsworth Huntington, and *Abstract of the papers and discussions* 1933 (50 p.) by C. S. Elton. The conference was arranged by Mr. Copley Amory who subsequently assembled this work.

36149. MATHEWS, JOHN L. The Pinchot-Ballinger controversy; a fight for the protection of the vast irrigation farm lands of the West from the control of water and water power monopolies. (Hampton's magazine, Nov.-Dec. 1909. v. 23, no. 5-6, p. 659-74; 825-36, illus.)

Describes the controversy between Secretary of the Interior Richard A. Ballinger and National Forester Gifford Pinchot. The second part of the article, entitled "Mr. Ballinger and the national grab-bag," includes a discussion of the controversy as it relates to the conservation of Alaska natural resources, especially the Cunningham coal claims in the Controller Bay region along the south coast of Alaska. Outlines the fights between various monopolies, their combinations, in their attempt to obtain control of the natural resources of Alaska. Louis R. Glavis, special agent of the U. S. Dept. of the Interior, submits charges to President Taft, suggesting collusion between Interior Department officials and the owners of fraudulent coal claims. Glavis' charges dismissed and Glavis dropped from Government service.

36150. MATIUSHKIN, FEDOR FEDOROVICH, 1799-1872. Pis'ma F. F. Matiuskhina iz Sibiri k E. A. Engel'hardt. (In: Vrangl', F. P. Puteshestvie po sev. beregam Sibiri, 1948. p. 349-403, 10 illus., facsim, map) Text in Russian. **Title tr.:** Letters of F. F. Matiuskhin from Siberia to E. A. Engel'hardt.

The letters of Matiuskhin, the outstanding member of the Vrangl' expedition to the northeast coast of Siberia, were found in 1948. Addressed to E. A. Engel'hardt, director of the Tsarskoye Selo Lyceum, where the author completed his education, they span the years 1817-1824, the period of the author's first round-the-world voyage on the *Kamchatka* in 1817-1819, and of his participation in the Vrangl' expedition of 1820-

1824. Some of the later letters are printed here as one of the supplements to a new edition of Vrangl's narrative. Dated from May 9, 1820 till Apr. 3, 1824, and mostly written from the main base at Nizhne-Kolymsk, these letters, fresh and vivid in style, with a sense of immediacy, recount the main events, work and hardships of the expedition, and include a journal of Matiuskhin's trip from Nizhne-Kolymsk to Bol'shoi Anyuy and back, July 20-Sept. 29, 1821 (p. 389-98). He describes the towns visited: Tomsk, Irkutsk, Yakutsk, Zashiversk, Sredne-Kolymsk, Nizhne-Kolymsk; Russian administrators encountered, among them the noted statesman, M. M. Speranskii, then General-Governor of Siberia; the geographic features: rivers, mountains, forests; encounters with natives: Tungus, Yakuts, Chukchis, Yukaghirs, Chuvantsy, etc., and impressions of their way of life (p. 372-73, 387, 390-92), etc. The text is embellished with reproductions of ten of Matiuskhin's ink and water-color sketches of landscape, natives, etc., one of them (p. 370), a sketch map of north-eastern Siberia showing his route from Yakutsk to Nizhne-Kolymsk.

36166. MEAD, WILLIAM RICHARD. Farming in Finland. [London], University of London, Athlone Press, 1953. 248 p. 16 illus. on 8 plates, 57 text maps, 41 tables.

"Descriptive study of the geography of Finnish farming," with objectives to examine the farm features which are a response to environmental conditions and to consider the modelling of the landscape by the Finnish farmer. Historical and physical geography of the various regions are considered. Methods and intensity of land clearance, land drainage, use of woodlands, grassland husbandry, crops, land ownership, resettlement of farmers following World War II are dealt with; also such farming problems as finances, machinery, water supply, electricity, communications, distribution of population, etc. The Lapland region is discussed, and information on northern regions generally given in many sections of the study. **Appended** are data on map sources and statistics, and costs of land clearance.

Contains an account on survival and survival time of mammalian skin in non-nutrient and nutrient media at various, including very low, temperatures. Author's recent work suggests slow freezing and rapid thawing to give best results with skin.

Copy seen: DSG.

36170. MEEN, VICTOR BEN, 1910- Chubb Crater, Ungava, Quebec. (Royal Astronomical Society of Canada. Journal, Sept.-Oct. 1950. v. 44, no. 5, p. 169-80, 16 illus. on 5 plates, 3 text maps, diag., table) ref.

Contains an account of the three-man Royal Ontario Museum - *Globe and Mail* expedition to Chubb Crater (northern Quebec, 61°17' N. 73°40' W.) led by the writer. The region is briefly described. Three trips were made to the crater from camp at Museum Lake, a distance of about two miles, and a complete circuit of the rim was carried out. The lake is about 10,000 ft. in diameter. The rim and approaches to the crater are described. No fragments

of meteoritic material were seen, but other evidence points to a meteoritic origin.

36172. MEIER, MARK F., and others. Preliminary data from Saskatchewan Glacier, Alberta, Canada. (Arctic, June 1954. v. 7, no. 1, p. 3-26, 6 illus., 6 text maps, diagrs., graph) 35 refs. *Other authors:* G. P. Rigsby and R. P. Sharp.

"Work on the glacier was initiated in the summer of 1952. Velocity measurements were made from 52 stations on the glacier surface. Reduction of the triangulation data is incomplete but preliminary measurements indicate that englacial movement is oblique to the surface. The max. velocity (1.2 ft./day) was observed at mid-glacier, one mi. below the firn line. Isolated reverse movements were also noted. Five different types of crevasses observed on the glacier are described. Sedimentary layering, flow foliation, faults, crystal fabrics and miscellaneous investigations are discussed."—SIPRE.

36173. MEINSHAUSEN, KARL FEDOROVICH, 1819-1889. Nachrichten über das Wilui-Gebiet in Ostsibirien, gesammelt und zusammengestellt von K. Meinshausen. St. Petersburg, 1871. xii, 246 p., fold. map. (Beiträge zur Kenntniss des russischen Reiches und der angrenzenden Länder Asiens, Bd. 26) Text in German. Reprinted in part, and in Russian translation in R. K. Maak, *Vil'vutskii okrug*, 1886, q. v. *Title tr.:* Information on the Vilyuy District in eastern Siberia, assembled and edited by K. Meinshausen.

Following an introductory account of the principal investigations of the region and their published results, the material is presented in two sections. In the first, termed geographical statistical (p. 1-54), Meinshausen (from the literature) sketches the physical geography of the region between the Lena River and the Vilyuy system (approx. 60°-65' N. 110°-130° E.); the landscape, lakes and rivers, communication routes, etc.; also in more detail (p. 29-54) the population; Yakuts and Yakutized Tungus, their number, character, dwellings, clothing and food, marriage customs, sacrifices and kumiss festivals (*ysssech*), health conditions, occupation, etc.

Part 2, termed Botanical section (p. 55-238), is based on the work of R. K. Maak (q. v.) and Pavlovskii, who traveled the region in 1854-55, and 1865, respectively. Their itineraries are given (p. 55-83) with scattered notes on plants observed, native plant names, and a general survey of the vegetation. Then follows (p. 84-109) tabulation of 470 seed plants and vascular cryptogams of this region, with their distribution elsewhere, and phytogeographic notes. Statistical data arranged by the families, and a systematic annotated list of these 470 species follow (p. 122-238) with habitat and local distribution indicated; four species of lichens and liverworts and six species of mosses are added. Index of Latin botanical names is appended.

Institut iazykoznanii. Voprosy teorii i istorii iazyka v svete trudov I. V. Stalina po iazykoznaniiu. Moskva, 1952. p. 430-60) 15 refs. Text in Russian. **Title tr.:** On the stability of the grammatical construction and the basic lexical stock of the Eskimo language; based on materials from the Eskimo dialects.

A comparative linguistic essay which aims to prove that all Eskimo dialects (about 25 of them) are based on a common background and have great affinities in vocabulary and grammatical forms. A number of words are traced through several dialects, starting with that of the Asiatic Eskimos; terms for relationship and age, names of animals, terms for parts of human body, names for objects of material culture, the naming of natural objects, numerals, etc. The author thinks that the homeland of all the Eskimo tribes was on the Chukotsk Peninsula and Asiatic coast of Bering Sea, whence the Eskimos traveled to America at the beginning of our era. **Copy seen:** DLC.

36185. MERCER, JOHN HAINS-WORTH, 1922- . The physiography and glaciology of southernmost Baffin Island. A thesis presented to the Faculty of Graduate Students and Research, McGill University, in partial fulfillment of the requirements for the degree Doctor of Philosophy. Montreal, Jan. 1954. 150 p. 110 illus., 5 text maps, graph. Typescript. 90 refs.

Objectives of the field investigation were to study the present glacier cover of the Kingaita Peninsula (approx. 62°30' N. 68° W.), and attempt to explain the course of glaciation and deglaciation during the Pleistocene, particularly in the Wisconsin period. The Grinnell and Terra Nivea icecaps, relic ice masses, and corrie glaciers are described. The icecaps are intermediate between the "Baffin" type and Ahlmann's Arctic Maritime type, with fairly healthy ice budgets but with a slight overall tendency toward shrinkage. "This comparative stability persists despite the wide range of seasonal air-temperature variation and seems to indicate that the icecaps respond only to longer-term climatic variations, which have probably tended toward warming." —SIPRE. The greatest elevation and most complicated physiographic feature is an escarpment along the northeast coast fronting Frobisher Bay. Pleistocene changes of level and elevated strandlines are described. The peninsula may have been covered by continental ice, but in the Wisconsin period the most elevated parts of the escarpment southeast of Cape Lawrence probably remained ice-free. In late Wisconsin the region was greatly depressed; postglacial elevation resulted in the series of abandoned strandlines. When sea level had fallen to 140-210 ft. above present level, run-off seems to have been much greater than it is today. Geomorphic evidence is discussed.

Gives the results of a field investigation by the author in 1927 of the Chandalar-Sheenjek district in northern Alaska between the Brooks Range and the Yukon Flats around Fort Yukon. The itinerary of the expedition, the geography, geology and economic geology of the district are described. The possibility of finding gold lode and placer deposits is discussed. Results are described of distillation tests of an oil shale sample reputed to have come from this district. Reports of coal deposits in the Christian River valley are noted. Topographic (contour interval 200 ft.) and geologic maps (both 1:500,000) of the district are appended.

Describes the chromite deposits at Port Chatham and Red Mountain at the southwest end of Kenai Peninsula on the south coast of Alaska. Notes also the occurrence of chromite at Livengood in the Yukon-Tanana region, central Alaska.

Copy seen: DLC.

36192. MERTIE, JOHN BEAVER, 1888- . Geology and gold placers of the Chandalar district. (U. S. Geological Survey. Mineral resources of Alaska in 1923. Bulletin, 1925, no. 773, p. 215-63, 4 sketch maps incl. 1 fold.)

Presents a summary statement of the results of a study of the geology and gold placers of the Chandalar district in

north-central Alaska made by the writer in 1923. Describes the geographic and economic features of the district, the geology, and mineral resources. Gold is the only metal yet mined or likely to be mined in the near future. The economic conditions surrounding mining operations are discussed and the gold placers and gold lodes and mineralization are described. The gold and silver production from 1906 to 1923 is given, that from 1913 by years.

Copy seen: DLC.

36193. MERTIE, JOHN BEAVER, 1888- . Gold placers of the Fortymile, Eagle, and Circle districts, Alaska. Washington, D. C., U. S. Govt. Print. Off., 1938. iv, 133-261 p., graph, 6 maps (5 fold.). (U. S. Geological Survey. Bulletin 897-C. Mineral resources of Alaska, 1936)

Presents the results of the author's field investigation in 1936 of the mining activities in these districts in the eastern part of the Yukon-Tanana region (approx. 64-66° N. 140°-145° W.) in east-central Alaska. Gives the location and extent of the districts, lists previous reports, and summarizes present investigation. Discusses (briefly) drainage and relief, climatic conditions, settlements, transportation, communications, other economic factors, also (in more detail) the general geology. The major part of the report treats in turn the gold placers and mining operations on the various creeks of the three districts.

Copy seen: DLC.

36194. MERTIE, JOHN BEAVER, 1888- . The gold placers of the Tolovana district. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1916. Bulletin, 1918, no. 662, p. 221-77, illus., sketch maps, fold. map)

Presents the results of a geologic field investigation in 1916, by the author, of the gold placers of Livengood Creek and nearby streams and of the geology and mineral resources of the surrounding territory, here designated the Tolovana district, located in central Alaska between Fairbanks and Rampart. Summarizes the previous and the present investigations, and describes the geography, geology, and mineral resources of the district. The auriferous mineralization is discussed and the gold lodes and placers are described. Economic conditions affecting mining operations are also considered.

Copy seen: DLC.

36195. MERTIE, JOHN BEAVER, 1888- . The Kaiyuh Hills, Alaska. Washington, D. C., U. S. Govt. Print. Off., 1937. ii, 145-78 p., 2 maps (1 fold., col.). (U. S. Geological Survey. Bulletin 868-D. Mineral resources of Alaska, 1934)

Presents the results of a field investigation by the author in 1934 of the Kaiyuh Hills, an isolated geographic province south of the Yukon River (63°58' N. 158° W.) in west-central Alaska. Describes the present investigation, the drainage and relief of the area, climatic conditions, timber, forage, game, settlements, and communication. Discusses the geology, and mineral deposits (silver-lead lodes), the possibility of finding gold lodes and placers, and other suggestions for future prospecting. Geologic sketch map, 1:500,000, is attached.

Copy seen: DLC.

36196. MERTIE, JOHN BEAVER, 1888- . Lode mining and prospecting on Seward Peninsula. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1916. Bulletin, 1918, no. 662. p. 425-49)

Presents a statement of progress and development work in 1916 on the gold, tungsten, antimony, copper, tin, iron, silver-lead, zinc, bismuth, and graphite lodes on Seward Peninsula.

Copy seen: DLC.

36197. MERTIE, JOHN BEAVER, 1888- . Lode mining in the Fairbanks district. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1916. Bulletin, 1918, no. 662, p. 403-424, fol. map, sketch map)

Presents results of a field investigation by the author in 1916 of some of the lode deposits in the Fairbanks region. Only an outline of the progress made in lode mining is given, not a comprehensive report on all of the lodes. Descriptions are given of mines producing in 1916 or being actively prospected. These include gold, antimony, silver-lead, and tungsten operations. *Copy seen:* DLC.

36198. MERTIE, JOHN BEAVER, 1888- . Lode mining in the Juneau and Ketchikan districts. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1919. Bulletin, 1921, no. 714, p. 105-128, fold. sketch map)

Describes the gold, copper, molybdenite, and palladium-platinum deposits of the Juneau and Ketchikan districts in south-

eastern Alaska, and the mining developments on them in 1919, based on a field investigation by the author.

Copy seen: DLC.

36199. MERTIE, JOHN BEAVER, 1888- . Mineral deposits of the Rampart and Hot Springs districts. Washington, D. C., U. S. Govt. Print. Off., 1934. iv, 163-226 p., 4 maps (3 fold.). (U. S. Geological Survey. Bulletin 844-D. Mineral resources of Alaska, 1931)

Presents information on mining activities obtained by the author during a visit in 1931 to the placer mines of the Rampart and Hot Springs districts in the western part of the Yukon-Tanana region in central Alaska. Describes the location and area, early history, geologic investigations, drainage and relief, climatic conditions, settlements and communication, geology, and economic geology (placer and lode gold, tin, coal, and mineral waters). The gold placers are described, and the mineralization of the area discussed in considerable detail.

Copy seen: DLC.

36200. MERTIE, JOHN BEAVER, 1888- . Mineral deposits of the Ruby-Kuskokwim region, Alaska. Washington, D. C., U. S. Govt. Print. Off., 1936. v, 115-245 p., 7 maps (6 fold.). (U. S. Geological Survey. Bulletin 864-C. Mineral resources of Alaska, 1933)

Includes results of a field investigation by the author in 1933 in west-central Alaska, between the Yukon and Kuskokwim Rivers. Describes the location and extent of the area. Summarizes the history of mining and the past and present investigations of the region. Lists reports and maps covering the Ruby-Kuskokwim region. Description of the geography covers drainage, relief, climatic conditions, timber, forage, game, settlements and communications. Both general and economic geology are covered. The gold placers of the Ruby, Cripple, Ophir, Tolstoi, Nixon Fork, McGrath, Iditarod, and Georgetown districts are described in detail. Lodes in the Ruby, Cripple and Ophir, Nixon Fork, Iditarod, and Georgetown districts are described; included are gold, antimony (stibnite), tin (cassiterite), silver-lead, copper, mercury (cinnabar), and bismuth-bearing lodes. Coal deposits (with analyses) are described in the Ruby and Iditarod districts. *Copy seen:* DLC.

**36201. MERTIE, JOHN BEAVER, 1888-
and G. L. HARRINGTON.** Mineral
resources of the Ruby-Kuskokwim region.
(In: U. S. Geological Survey. Mineral
resources of Alaska in 1915. Bulletin,
1916, no. 642, p. 223-66, fold, map.)

Contains the results of a geologic field
investigation by the authors in 1915 of
the Ruby-Kuskokwim region in west-
central Alaska. Summarizes previous
geologic investigations in the area.
Describes various geographic features,
timber and forage, game and fish, settle-
ments and population, transportation,
supplies, labor, fuel, water supply, and
the general geology. Mineral resources
include gold (lode and placer), antimony
(stibnite), mercury (cinnabar), tin (cas-
siterite), tungsten (scheelite), and coal.
The gold placers are described in detail.
Described also are the gold lodes, an-
timony, and quicksilver lodes, stream
tin, and the coal resources. The mineral-
ization of the region is discussed and
possible areas for prospecting are con-
sidered. Mining developments in 1915
in the Ruby, Innoko, Candle and Moore
Creeks, and the Iditarod are summarized.
Authors' bulletin on this region is *Arctic
Bibliography*, No. 11319.

**36202. MERTIE, JOHN BEAVER, 1888-
.** Mining in the Circle District. (In:
U. S. Geological Survey. Mineral re-
sources of Alaska in 1929. Bulletin,
1932, no. 824, p. 155-72, 2 maps incl.
1 fold.)

Presents the results of a visit by the
author in 1929 to the Circle district of
the eastern Yukon-Tanana region. De-
scribes the geography and geology of the
region and the mining developments in
1929 on the gold placers of the various
creeks. Gives the annual production of
gold from the Circle district from 1894
to 1929, both inclusive.

Copy seen: DLC.

**36203. MERTIE, JOHN BEAVER, 1888-
.** Mining in the Fortymile district.
(In: U. S. Geological Survey. Mineral
resources of Alaska in 1928. Bulletin,
1930, no. 813, p. 125-42, 2 sketch maps)

Summary of data on mining develop-
ments in the Fortymile district, south of
Eagle on the Yukon River, in eastern
Alaska, as obtained by the author during
a visit in 1928. Describes the geography,
geology, and the developments on the
gold lodes, gold placers, and coal deposits.

**36204. MERTIE, JOHN BEAVER, 1888-
.** Notes on the geography and geology
of Lituya Bay. (In: U. S. Geological
Survey. Mineral resources of Alaska in
1930. Bulletin, 1933, no. 836, p. 117-35,
map)

Summarizes investigations of the ge-
ography and geology of Lituya Bay in
the Gulf of Alaska (approx. 58°38' N,
137°33' W.). Assembles and describes
the geography and geology of the area,
and the placer mining operations.

**36205. MERTIE, JOHN BEAVER, 1888-
.** Notes on the Salmon-Unuk River
region. (In: U. S. Geological Survey.
Mineral resources of Alaska in 1919.
Bulletin, 1921, no. 714, p. 129-42, fold
map)

Compilation of data on the geography,
geology, and mineral resources of the
Salmon-Unuk River region along the
Canada-Alaska boundary in the extreme
southeastern part of Southeast Alaska.
The mineral resources include gold, and
silver, the silver-bearing minerals includ-
ing argentite, argentiferous tetrahedrite,
native silver, pyrrhotite, proustite, pos-
sibly stephanite, and others.

Copy seen: DLC.

**36206. MERTIE, JOHN BEAVER, 1888-
.** The occurrence of metalliferous de-
posits in the Yukon and Kuskokwim
regions. (In: U. S. Geological Survey.
Mineral deposits of Alaska in 1921.
Bulletin, 1923, no. 739, p. 149-65)

Presents in condensed form some
generalizations and deductions regarding
the distribution and occurrence of mineral
deposits in interior Alaska. Lists U. S.
Geological Survey publications containing
geologic and metallogenetic data on dis-
tricts in central Alaska. Discusses lode
metallization connected with granitic
intrusive rocks, the metallization con-
nected with the basic intrusive and
extrusive rocks, and lode prospecting.
Presents a classification of placer de-
posits and discusses methods of prospec-
ting for placers.

Copy seen: DLC.

**36207. MERTIE, JOHN BEAVER,
1888-.** Placer mining on Seward Pen-
insula. (In: U. S. Geological Survey.
Mineral resources of Alaska in 1916.
Bulletin, 1918, no. 662, p. 451-58)

Describes operations in 1916 on the
gold, tin, tungsten, and platinum-bearing
placers, and on the weathered outcrops of
tungsten lodes (mined by placer-mining

methods). Placer gold on Seward Peninsula is recovered by dredging, by underground mining, and by open-cut work, including hydraulic mining. Lists of all these operations are given, as well as the annual production of gold and silver on Seward Peninsula from 1897 to 1916. Tin was recovered by dredging operation, as was part of the tungsten (scheelite) production, although some of the scheelite was obtained by placer-mining operations. **Copy seen:** DLC.

36208. MERTIE, JOHN BEAVER, 1888- . Platinum-bearing gold placers of the Kahiltna valley. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1917. Bulletin, 1919, no. 692, p. 233-64, geol. sketch map)

Presents the results of a field investigation in 1917, by the author (1) of the occurrences of platinum in the gold placers along the lower part of the Kahiltna River, on the south side of the Alaska Range, northwest of Anchorage, and (2) of the mining developments during the preceding six years. Describes the geography, geology, and mineral resources of the region (Placer gold, platinum, cassiterite (tin oxide) and scheelite (calcium tungstate), and Tertiary lignitic coals). Discusses the economic conditions bearing on mining development in the region, and describes the placer deposits and the placer mining operations. **Copy seen:** DLC.

36209. MERTIE, JOHN BEAVER, 1888- . Platinum deposits of the Goodnews Bay district, Alaska. Washington, D. C., U. S. Govt. Print. Off., 1939. iii, 115-43 p., fig., 3 maps. (U. S. Geological Survey. Bulletin 910-B. Mineral resources of Alaska, 1937)

Presents the results of a field investigation by the author in 1937 of this platinum metals district in southwestern Alaska, on the coast of Bering Sea between the mouth of the Kuskokwim River and the base of the Alaska Peninsula. The deposits are stream placers derived from the erosion of peridotite, perknite, and other types of ultrabasic igneous intrusive rocks. Alloys of the platinum metals—platinum, iridium, osmium, ruthenium, rhodium, and palladium—are obtained in the concentrates from the placer-mining operations. The author describes the history and general conditions of mining, and the placer deposits of the different streams. He discusses the general characteristics of

the platinum group of metals; gives analyses of the Goodnews Bay placer platinum alloys, and his conclusions as to the origin of the platinum placers. **Copy seen:** DLC.

36210. MERTIE, JOHN BEAVER, 1888- . Preliminary report on the Sheenjek River district. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1926. Bulletin, 1929, no. 797, p. 99-123, 2 maps, incl. 1 fold. in pocket)

Presents the results of a field investigation by the author, in 1926, of the Sheenjek River district in northeastern Alaska (approx. 66°44' N. 144°32' W.) northeast of Fort Yukon. Describes the geography and geology of the region. No workable mineral deposits have been found in the area. Gives results of distillation of oil shale sample, and analyses of potash-bearing lake waters from the Yukon Flats. Potash content ranges from three to nearly 11 percent K₂O. Flowering plants (about 65) collected by the author, during the summer and determined by Dr. Paul C. Standley, are also listed. **Copy seen:** DLC.

36211. MERTIE, JOHN BEAVER, 1888- . The Tatonduk-Nation district, Alaska. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1930. Bulletin, 1933, no. 836, p. 347-443, 2 fig., 2 maps incl. 1 fold.)

Results are presented of an investigation and geologic studies by the author in 1930 of this district, a triangular area of about 600 sq. mi. between the Canadian boundary, the Nation and Yukon Rivers in east-central Alaska. Various geographic features are described in some detail: drainage and relief, settlements and population, trails and transportation, climate, animal life, vegetation, with a list of 164 commonly found plants of the district. The geology of the region is also described in considerable detail (p. 368-443) with stratigraphic sections and numerous lists of fossils. A geologic reconnaissance map 1:125,000 is included. **Copy seen:** DLC.

36212. MERTIE, JOHN BEAVER, 1888- . Tertiary deposits of the Eagle-Circle district, Alaska. Washington, D. C., U. S. Govt. Print. Off., 1942. iii, 213-64 p., 2 maps (1 fold.) (U. S. Geological Survey. Bulletin 917-D. Mineral resources of Alaska, 1938)

*Presents results of the author's field study in 1938 of the gold placers of the Tertiary sedimentary area of this district south of the Yukon River and west from the Canada-Alaska boundary in east-central Alaska. Discusses its geography and general geology, then describes the Tertiary rocks in detail, covering their distribution (cf. fold. map), general features, local details, age, stratigraphy; structure, associated placers, and character of the gold. Notes presence of platinum and mercury alloyed with the Mesozoic placer gold derived from the Tertiary rocks, detailed in three complete analyses. The mercury deposits of Alaska, so far as known, are genetically related to Tertiary granitic rocks. Mercury in Mesozoic gold is both unexpected and at present inexplicable. **Copy seen:** DLC.*

Contains descriptions of apparatus and method for detection of crystalline freezing in tissue. Microwave reflection is applied from an adapted radar test unit, operating in the 3 cm. wave length range. The use of other methods as well as factors involved in field use of the present method, are also discussed.

Contains brief review of work done in the investigation of the art of Ostyaks, Buryats, Tungus and Soyots. Theories of West European historians of art, errors of the past and new viewpoints are discussed. Much attention has been given in the past to the forms of ornaments; such investigation, without insight into the life of the people, reveals very little. The art of the Siberian peoples is not primitive at all; there is no universal art, only that of a certain people, and it depends fundamentally upon their mode of life. The rules of evolution in art must be discovered. Art depends on the forms of religion, social organization, and economy; nor should its practical side be overlooked.

36235. MILLER, ALDEN HOLMES. 1906- , and **T. T. McCABE.** Racial differentiation in *Passerella (Melospiza) lincolni*. (Condor, May-June 1935. v. 37, no. 3, p. 144-60, illus., text maps)

Contains notes on the principle variable characters of the Lincoln sparrow, a description of the transcontinental-boreal area (Newfoundland-Labrador region, Hudson Bay, Mackenzie District and interior Alaskan region) inhabited by *P. l. lincolni*, and the northern Pacific coast areas where *P. l. gracillis* breeds. The breeding grounds and winter ranges are indicated on text maps and analysis of racial characters and measurements of races are given.

Copy seen: DLC; MH-Z.

36236. MILLER, ALDEN HOLMES. 1906- . Speciation in the avian genus *Junco*. (California. University. Publications in zoology, May 24, 1941. v. 44, no. 3, p. 173-434, 33 illus.) 172 refs.

Contains a taxonomic and zoogeographic study of the speciation of the genus *Junco*; with a survey of the genus and material, analyses of variations and interrelationships of races and species (p. 180-353): racial characters, non-geographic variation, geographic variation with the race, distribution and relationship with adjacent forms. Intra-racial, interracial and environmental correlation, variability, phylogeny and formation of species are discussed (p. 354-80). *Appended* (p. 381-425) are nomenclature of 29 recognized forms, and breeding localities. *J. oregonus oregonus* (Yakutat Bay region, Alaska), *J. hyemalis hyemalis* (Alaska, Yukon Territory, Northwest Territories, Labrador) and *J. h. cis-montanus* (Yukon), are included. Fig. 16 (p. 275) is a distributional map of the breeding juncos of Alaska.

36237. MILLER, DAVID HEWITT. The influence of snow cover on climate in Greenland. (American Meteorological Society. Bulletin, Feb. 1954. v. 35, no. 2, p. 90)

Contains abstract of paper presented at the 128th National Meeting of the Society, Apr. 28-30, 1954, Baltimore, Md. On the inland ice, low conductivity of snow combined with rapid heat loss by

long-wave radiation is responsible for extreme chilling of the air between storms during the winter darkness. Throughout the daylight summer period, high albedo and the change of state at the freezing point restrain the rise of temperature and prevent compensatory warming in periods of strong insolation.

Contains an account of a geological expedition made with A. L. Chekanovskii in 1873-75 to the regions of Turukhansk and Nizhnyaya Tunguska, and of the second trip to the region of Vilyuysk and Olenek. The basin of the Olenek River

was explored. Includes notes on the Tungus, who served as guides, and with whom the two explorers spent months, living in their tents or nomadizing with them in the tundra.

Copy seen: DLC.

36241. MILLER, FERDINAND FERDINANDOVICH, 1837-1900. Tungusy, akuty i chukehi. (In: Zhivopisnaya Rossiya, ed. by P. P. Semenov, 1895. t. 12, pt. 1, p. 251-66, 9 illus.) Text in Russian. *Title tr.:* Tungus, Yakuts, and Chukchis.

Contains a general characterization of these peoples, their mode of life and customs, mostly from the writer's observations. The honesty of the Tungus, among whom he spent about two years, is praised; their religious practices, Christian and shamanistic, and their burial ceremonies are outlined; their hunting and fishing as observed in the Olenek region (cf. *Arctic Bibliography*, No. 24354) is described. The cattle-breeding and agriculture of the Yakuts, their villages, fairs and trade, skill in crafts, their character, food and clothing, religious practices and health conditions, etc., are sketched. A visit to the Chukchi chieftain Anreurgin is described in detail, and further details are given on Chukchi religion, burial and wedding customs, hunting, decorative art, etc. from author's observations and from material collected by Nordenskiöld. *Copy seen:* DLC.

Contains account of special B-29 "Ptarmigan" flight, Aug. 1-2, 1951, in which the writer, Dr. Terris Moore, and Major Lawrence Koenig took part: from Fairbanks, Alaska, via Beaufort Sea, Prince Patrick, Borden, and northern Axel Heiberg Islands to the north coast of Ellesmere, thence northeast to 87° N. and return to Alaska. The Ellesmere Ice Shelf and ice islands T-1 and T-2 were observed and photographed during the 20-hr. flight. The ice shelf as origin of the ice islands, and the

scientific value of the islands are briefly discussed.

Glaciological and meteorological work and tests of new research equipment were carried out on upper Taku Glacier, Southeast Alaska, in Oct.-Nov. 1953. An operational test on early winter snow surfaces was undertaken by the Tenth Air Rescue Group, U. S. Air Force. Equipment was flown to site of proposed high altitude snow observatory at 6,400 ft. Plans for establishment of a low-level glaciological station near the terminus of Taku Glacier are noted.

Contains brief account of the sixth expedition of the Project. Icefield personnel (led by A. K. Gilkey) numbered 14; a team of five ecologists under separate contract carried out related investigations at a lower elevation. The programs of investigations in glaciology,

ecology, mapping, meteorology, and geomorphology are described. Summarized in *Polar Record*, July 1954. v. 7, no. 48, p. 146-47. **Copy seen:** DLC.

36247. MILLER, MAYNARD MALCOLM. Memorandum on glaciological research in Norway and Sweden, from information obtained on trip to Scandinavia in December, 1951. New York, Jan. 1952. 21 p. 7 illus. Mimeographed. (American Geographical Society, Internal memorandum, no. 1) 10 refs.

Contains chronological account of trip Dec. 8-31, 1951, when the writer carried out glaciological work with the Cambridge University Jotunheimen Expedition in central Norway, and had conferences with scientists in Norway and Sweden. Glaciological work in the Svartisen region (northern Norway), Svalbard, and the Mt. Kebnekaise region of Swedish Lapland is discussed, and comparisons made with work of the Juneau Ice Field Research Project in Southeast Alaska; the American Geographical Society's projected Greenland expedition in summer 1952 is noted. **Copy seen:** CaMAI.

36248. MILLER, MAYNARD MALCOLM. Memorandum on the Greenland ice cap investigations of Expéditions polaires françaises in 1948-1951, from conferences with members of the expedition in Paris, Feb.-March, 1952. Prepared for the American Geographical Society. New York, June 1952. 29 p. text map, diagrs., tables. Mimeographed. (American Geographical Society. Internal memorandum, no. 2.)

Summary prepared primarily for possible use by the Society's Southwest Greenland Glaciological Project. Source of funds and purpose of the French investigations are outlined; study sites on the icecap are listed. Brief descriptions are given of methods and some results of the geodetic survey, seismic surveys, gravity measurements, mechanical core drilling, thermal boring for englacial and firn temperatures, meteorology program, atmospheric physics. Photographic equipment, clothing and sleeping equipment, administrative matters and scientific reports are described. *Appended* are geophysical notes on the depth of polar icecaps, summarized from symposium given by J. J. Holtzschcher; and tabular data on polar firn density and glacio-thermal relations in mechanically-bored holes in the Greenland icecap.

Copy seen: CaMAI.

36249. MILLER, MAYNARD MALCOLM. Status reports of the Juneau Ice Field Research Project, Alaska, from 1948 to 1952. New York, July 1953. 29 p. text map. Mimeographed. (American Geographical Society. Internal memorandum, no. 4.)

Reconnaissance investigations of the ice field in 1946, 1947 and field work in summer 1948 were privately organized and financed by members of the field parties. In 1949 the American Geographical Society associated itself with the program and the U. S. Office of Naval Research supported it through 1952. Brief status reports here presented cover each expedition through summer 1952 as to: number and names of personnel, duration and location of work, scientific program, equipment, supporting agencies, persons visiting the project; results are outlined in geophysics, glaciology, geomorphology, bedrock geology, survey and mapping, meteorology, and plant ecology. **Copy seen:** CaMAI.

36250. MILLER, RICHARD BIRNIE, 1915- , and W. A. KENNEDY. Observations on the lake trout of Great Bear Lake. (Canada. Fisheries Research Board. Journal, Feb. 1948. v. 7, no. 4, p. 176-89, 2 graphs, 7 tables) 10 refs.

Contains results of a survey made by a three-man party from the Fisheries Research Board of Canada in summer 1945. A collection was made of 493 lake trout (*Cristivomer namaycush*), the principal fish of Great Bear Lake. A brief summary of the limnology of the lake is followed by discussion of distribution and availability of the trout, growth rate, maturity, time and frequency of spawning, the young, food, flesh color, taxonomy, and parasites.

36251. MILLER, RICHARD BIRNIE, 1915- , and W. A. KENNEDY. Pike (*Esox lucius*) from four northern Canadian lakes. (Canada. Fisheries Research Board. Journal, Feb. 1948. v. 7, no. 4, p. 190-99, 2 graphs, 5 tables) 10 refs.

"Scale samples and length and weight measurements of 281 pike from Great Bear Lake, Great Slave Lake, Lake Athabaska and Lesser Slave Lake have been used to calculate the rate of growth. [Studies were made in part during a survey of the fisheries of Great Bear Lake in summer 1945 for the Fisheries Research Board of Canada.] A comparison with the growth rate of pike from Waskesiu Lake, Saskatchewan, and lakes in Wisconsin shows that, in general, the rate varies with north latitude. The northern fish live five years longer but never attain as large a size. It is shown that the relationship between length and weight is independent of the rate of growth. Males and females grow at the same rate but females appear to live longer than males."—Author's abstract.

Copy seen: DLC.

36252. MILLER, TOM. A summer in the St. Elias Range. (Canadian alpine journal, 1954. v. 37, p. 34-39, 2 illus., text map)

Contains account of the Mt. Logan-Cook Expedition, June-Aug. 1953 in the St. Elias Mts., Yukon-Alaska. The five-man group from Seattle, Wash., led by R. McGowan, made unsuccessful attempts upon Mt. McArthur (14,400 ft.) and the east ridge of Mt. Logan (19,850 ft.), but succeeded in a first ascent of Mt. Cook (13,760 ft.).

Copy seen: DGS.

36253. MILLER, W. H. Recent changes in Canadian mapping methods. (Canadian mining journal, Nov. 1954. v. 75, no. 11, p. 66)

A series of shoran stations has been established from southern Manitoba northwest through Saskatchewan and Alberta, then east across the Northwest Territories to Baffin Island, thence south and west through Labrador and northern Quebec to northern Ontario, forming a closed loop. Geodetic control adequate for mapping has been established over a large area. This geodetic shoran net provides stations for shoran-controlled air photography, permitting coverage of large areas in a minimum of time.

tr.: Cold-self-agglutination of erythrocytes; historical and critical study of the actual position of the phenomenon in bio-pathology.

Contains an extensive study on the occurrence of this kind of agglutination; its biological interpretation; critique of some concepts; personal interpretation of the significance of these phenomena, etc.

Copy seen: DSG.

36255. MILLS, CLARENCE ALONZO, 1891- . Climate makes the man. New York & London, Harper, 1942. 320 p. illus. maps.

A semi-popular book on the effects of climate on man's behavior. Pt. 1 (p. 3-67) deals with the history of the problem, experimental research, diet and vitamins in different climates; sexual maturation and climate. Pt. 2 (p. 71-214) climate and human activity; effect of drugs in different climates; weather and behavior; climate, diseases, and reproduction; artificial climates. Pt. 3 (p. 217-320) life as affected by the atmosphere; sunspots; climate and migrations, wars, social behavior. Sections and references to cold climate are found throughout the book.

Text in Russian. **Title tr.:** On the distribution of the bivalve molluscs of the eastern Murman in connection with the temperature fluctuation of the habitat.

Fourteen species of cold-water and 32 warm-water molluscs are listed; diagram shows the limits of fluctuation of their numbers in relation to Barents Sea temperature changes in their area.

Copy seen: DLC; MH.

36258. MILOSLAVSKAĬA, N. M. Ob izmenenii vesa *Macoma baltica* v razlichnykh usloviakh obitaniia. (Akademii nauk SSSR. Doklady, 1953. nov. seriia, t. 89, no. 6, p. 1103-1105) Text in Russian. **Title tr.:** The fluctuation of the weight of *Macoma baltica* under various environmental conditions.

Contains the results of a biological study of this mollusc, in various habitats on the eastern Murman coast. It was found that the shells of larger specimens living in shallow waters were lighter than those of smaller specimens inhabiting the deeper sections of the littoral zone. This is explained by the different chemical composition of the sea-water of the two habitats: the acid properties of the shallow waters wear down the larger molluscs' shells, whereas the smaller molluscs living in deeper waters, with alkaline characteristics, have their shells better preserved.

36273. MÖLLER, FRITZ. Zur Erklärung des Eisblinks. (Polarforschung, 1953, pub. 1954. Bd. 3, Heft 1-2, Jahrg. 23, p. 236) Text in German. **Title tr.:** An explanation of the iceblink.

"The origin of the iceblink [common near large drift-ice fields in polar regions,] is discussed briefly and the influence of a snow cover on the brightness of the sky is calculated for albedo values of 10 percent and 70 percent assuming a solar angle of 14°, an observation angle of 1° and an absolutely pure atmosphere. Results show that the sky brightness over a snow-covered surface is 3 times that over water. The hue is equal to a wave-length of 436 m μ with a saturation of 13 percent over snow as against 482 m μ with a saturation of 27 percent over the sea."—SIPRE. It is assumed that the atmosphere is absolutely pure and that the entire area is snow or water covered.

MOFFAT, NANCY M., see Sellers, E. A., and others. Regulation of food consumption rats in cold. 1954. No. 37312.

36276. MOFFIT, FRED HOWARD 1874- . The Chitina copper district. (In: U. S. Geological Survey. Mineral resources of Alaska in 1911. Bulletin, 1912, no. 520, p. 105-107)

Presents data from various sources on the mining developments in the Kotsina-Chitina copper district and in the Chititu Creek and Dan Creek gold-placer districts. Notes the arrival in Cordova (from the Kennicott Bonanza Mine) on Apr. 7, 1911, of the first commercial shipment of copper ore (chalcocite) from the Copper River basin.

36277. MOFFIT, FRED HOWARD 1874- . Geology of the eastern part of the Alaska Range and adjacent area. Washington, D. C., U. S. Govt. Print. Off., 1954. p. 63-218, 16 illus., 4 maps (2 fold.), sections, tables. (U. S. Geological Survey. Bulletin 989-D) 34 refs.

The area described includes the Alaska Range from Delta River to the Canadian boundary and part of the Wrangell Mts. and upper Copper River valley (approx. 62°-64° N. 141°-146° W.). Most of the region is underlain by Precambrian to Recent folded and faulted sedimentary and metamorphic rocks; igneous intrusives and volcanic rocks have almost as great a range in age. The Alaska Range and Wrangell Mts. were both developed in Tertiary time. The height and length

of the former are due to folding, faulting, and elevations of the land; the latter mountains are the result of the piling up of lava and tuff beds. Both ranges have much modified by stream and glacial erosion. Stratigraphy, structure, pre-Quaternary and Pleistocene geologic history, and economic geology of the gold, copper, antimony, and molybdenum deposits are described in turn.

Copy seen: DGS.

36278. MOFFIT, FRED HOWARD 1874- . Geology of the Prince William Sound region, Alaska. Washington, D. C. U. S. Govt. Print. Off., 1954. p. 225-310, 24 illus., 2 maps (1 fold.) diagr., cross-sections. (U. S. Geological Survey. Bulletin 989-E) 22 refs.

Rocks of this region (60°35' N. 147 W.) on the south Alaska coast are primarily late Mesozoic sedimentary deposits, slates and graywackes which were divided by early geologists into two groups, the Valdez (older) and Orca (younger). Metamorphosed basic lava flows and intrusives (greenstones), considered Late Cretaceous in age, and younger granitic dikes, sills, and batholithic bodies (Cretaceous or Tertiary) are also found. The bedrock geology is described by areas, and geologic history of the region is outlined. Effects of Pleistocene glaciation, the existing glaciers, and the copper and gold deposits are briefly discussed.

36279. MOFFIT, FRED HOWARD 1874- . Geology of the upper Tetling River district, Alaska. Washington, D. C., U. S. Govt. Print. Off., 1941. iv, 115-57 p., fig., 8 illus. on 4 plates. 3 maps incl. 2 fold. (U. S. Geological Survey. Bulletin 917-B. Mineral resources of Alaska, 1938)

Presents the results of the author's field investigation in 1938 of the upper Tetling River portion of the Alaska Range lying northeast of the Wrangell Mts. and extending from Suslota Pass to the Nabesna River (approx. 62° 40' N. 143° W.) in southeast-central Alaska. Describes previous surveys and the present investigation, the geography (relief, drainage, routes and trails, timber and forage), the geology, and mineral resources (molybdenite lodes and gold lodes and placers). Topographic and geologic reconnaissance maps of the district, 1:250,000, contour interval 200 ft., are attached.

Gives the results of a geologic investigation by the author in 1920, of the Tuxedni Bay region in southwestern Alaska, with reference to the possibility of producing oil. Summarizes previous investigations; describes the location, geography, descriptive geology and structure; considers oil possibilities.

Copy seen: DLC.

36281. MOFFIT, FRED HOWARD, 1874- . Gold mining on Seward Peninsula. (*In*: U. S. Geological Survey. Mineral resources of Alaska in 1905. Bulletin, 1906, no. 284, p. 132-44, illus., map)

Contains descriptions of gold placer mining operations in 1905, in various districts on Seward Peninsula, principally Nome, Solomon River, Council, Teller, Kougarak, and Fairhaven districts. Notes occurrence of cinnabar in the gold placers of Daniels Creek; one gold quartz lode mine with stamp mill in operation in Solomon River region. Gives developments on copper lode (6-21 in. thick) in Teller region, principally malachite, some azurite with quartz in limestone. Discusses rather extensively ditch construction in the gold placer districts on Seward Peninsula (p. 141-44).

Copy seen: DLC.

36282. MOFFIT, FRED HOWARD, 1874- . Iniskin Bay district. (*In*: U. S. Geological Survey. Mineral resources of Alaska in 1921. Bulletin, 1923, no. 739, p. 117-32, fold. map)

Presents the results of a geologic investigation in 1921 by the author, of the oil possibilities of this district on the Iniskin-Chinitna Peninsula between Iniskin Bay and Chinitna Bay on the west side of Cook Inlet in southwestern Alaska. Summarizes previous investigations and describes the geography and geology of the peninsula. Petroleum is the only known mineral resource of the area. Describes the seepages of petroleum, the exploration for it in the area, and its character and occurrence.

Copy seen: DLC.

36283. MOFFIT, FRED HOWARD, 1874- . The Kantishna district. (*In*: U. S. Geological Survey. Mineral re-

sources of Alaska in 1930. Bulletin, 1933, no. 836, p. 301-338, 2 fig., fold. map)

Presents the results of a field examination in 1930, by the author, of this district on the north side of the Alaska Range, near Mt. McKinley. Describes its location and area, the roads and trails, the geology, and the mineral resources. The latter include placer gold, coal, and lodes containing antimony, lead, zinc, copper, gold, silver, and mercury.

Copy seen: DLC.

36284. MOFFIT, FRED HOWARD, 1874- . The metalliferous deposits of Chitina valley. (*In*: U. S. Geological Survey. Mineral resources of Alaska in 1922. Bulletin, 1924, no. 755, p. 57-72)

Presents a summary of the mode of occurrence of the mineral deposits of this valley in southeastern-central Alaska between the Wrangell and Chugach Mts.; and points out their relation to the geologic formations and structure. Describes the general geology, the character of the gold, silver, and copper deposits, and discusses the age of the mineralization.

Copy seen: DLC.

36285. MOFFIT, FRED HOWARD, 1874- . Mineral deposits of the Kotsina-Kuskulana district, with notes on mining in Chitina valley. (*In*: U. S. Geological Survey. Mineral resources of Alaska in 1914. Bulletin, 1915, no. 622, p. 103-117, fold. maps)

*Presents results of geologic explorations by the author and others in 1914 in the Kotsina-Kuskulana district, south of the Wrangell Mts. in southeast-central Alaska. Discusses past and present mining conditions in the district. Describes the geology and mining developments of the copper deposits of the Kotsina-Kuskulana and Nizina districts, also of the gold deposits of the same districts. Map in scale 1:500,000, shows mineral resources of the lower Copper River region, from Prince William Sound region on the west to the Yakataga region on the east, and from the Pacific coast north to the Wrangell Mts. The author and J. B. Mertie's bulletin on this area is *Arctic Bibliography*, No. 11586.*

Copy seen: DLC.

36286. MOFFIT, FRED HOWARD, 1874- , and A. G. MADDREN. The mineral resources of the Kotsina and Chitina valleys, Copper River region. (*In*: U. S. Geological Survey. Mineral

resources of Alaska in 1907. Bulletin, 1908, no. 345, p. 127-75, fold. map)

Contains the results of a field investigation by the authors in 1907, of the geology and mineral resources of these valleys, in southeastern-central Alaska, between the Wrangell and Chugach Mts., one of "the four best known and most promising copper-bearing regions in Alaska." Describes the geography, general geology, and economic geology of the region. The mineral deposits described include those of copper, realgar (sulfide of arsenic), coal, and gold (Nizina gold placer). cf. authors' bulletin of these investigations, *Arctic Bibliography*, No. 11585.

36287. MOFFIT, FRED HOWARD, 1874- , and A. KNOPP. Mineral resources of the Nabesna-White River district. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1908. Bulletin 1909, no. 379, p. 161-80, fold. map)

Preliminary statement of the results of a geologic-topographic survey in 1908 of an area ($61^{\circ}40'-62^{\circ}40'$ N. $141^{\circ}-143^{\circ}20'$ W.) on the northeast side of the Wrangell Mts. Various geographic features are described, also the general geology. The mineral resources include copper, gold, and lignite deposits. The copper deposits include native copper and various copper sulfides (chalcocite, bornite, and chalcopyrite). Placer gold occurs but in unremunerable amounts. Lode-quartz deposits have been discovered in the Nutzotin Mts. Authors' bulletin on this district is listed as *Arctic Bibliography*, No. 11584.

Copy seen: DLC.

36288. MOFFIT, FRED HOWARD, 1874- . Mineral resources of the upper Chitina valley. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1915. Bulletin, 1916, no. 642, p. 129-36, fold. map)

Presents the results of a geologic field investigation in the upper Chitina valley (approx. $61^{\circ}10'$ N. $142^{\circ}20'$ W.) in southeast-central Alaska in 1915. The geography, geology, and mineral resources are described. Gold, copper (native copper, chalcocite, chalcopyrite, and bornite), and molybdenite occur there, but not in paying quantities.

Copy seen: DLC.

36289. MOFFIT, FRED HOWARD, 1874- . Mining development in the Tatlanika and Totatlanika basins. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1930. Bulletin, 1933, no. 836, p. 339-45, fig., fold. map)

Describes mining developments in 1930 and 1931 in the basins of the Tatlanika and Totatlanika, small rivers which rise on the north side of the Alaska Range east of the Nenana and flow northward to the Tanana. Previous developments are reviewed, 1903-1931; a description is given of the lode gold deposits on Eva Creek; also and in detail, of the Liberty Bell claim. Includes notes by J. M. Hill, of the U. S. Geological Survey, who examined and sampled the ore body in 1931. Placer mining operations in the region in 1930 are reported.

Copy seen: DLC.

36290. MOFFIT, FRED HOWARD, 1874- . Mining in Chitina valley. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1912. Bulletin 1913, no. 542, p. 81-85)

Presents results of detailed investigations in the western part of the Chitina valley copper belt of the Copper River region in 1912. Describes the development work on the copper (chalcopyrite, chalcocite and bornite) mines and prospects in the valley, and on the gold placers of the Nizina district. Deposits of copper ore are shown to be associated with diorite intrusives as well as with the greenstones of the region.

Copy seen: DLC.

36291. MOFFIT, FRED HOWARD, 1874- . Mining in Chitina valley. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1919. Bulletin, 1921, no. 714, p. 189-96)

Presents data on the mining developments in 1919 on the gold and copper mines and prospects in the Chitina River valley in southeastern-central Alaska in the Wrangell and Chugach Mts.; based on a visit by the author in Sept. 1919.

Copy seen: DLC.

36292. MOFFIT, FRED HOWARD, 1874- . Mining in the Chitina district. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1909. Bulletin, 1910, no. 442, p. 158-63)

Describes the progress in the construction of the as yet uncompleted Copper River and Northwestern Railroad up the Copper River valley from Cordova, and

the mining operations on the copper lode deposits and on the gold placer deposits of the Chitina district. Discusses briefly the revision of previously held views of the geology of the district as a result of the 1909 investigations. Also discusses the origin of some of the gold and copper deposits of the area. *Copy seen:* DLC.

36293. MOFFIT, FRED HOWARD, 1874- . Mining in the Kotsina-Chitina, Chistochina, and Valdez Creek regions. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1908. Bulletin, 1909, no. 379, p. 153-60, maps)

Contains descriptions of the copper prospects and gold placers of the Kotsina-Chitina region, and of the gold placers of the Chistochina River region, and of Valdez Creek, a small headwater tributary of the Susitna River.

Copy seen: DLC.

36294. MOFFIT, FRED HOWARD, 1874- . Mining in the lower Copper River basin. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1916. Bulletin, 1918, no. 662, p. 155-82; 2 fold. maps, 3 figs.)

Describes the copper deposits and mining operations in 1916 in the Chitina valley, southwest of the Wrangell Mts., and the gold lodes and mining developments in 1916 in the Tickel district, along the Valdez-Fairbanks trail near Tickel in the Chugach Mts., both districts lying in southeastern-central Alaska.

Copy seen: DLC.

36295. MOFFIT, FRED HOWARD, 1874- . Mining in the northern Copper River region, Alaska. Washington, D. C., U. S. Govt. Print. Off., 1944. ii, 25-47 p., diagr., map. (U. S. Geological Survey. Bulletin 943-B. Mineral resources of Alaska, 1941-42)

As a result of field investigations in 1941, the author presents data on mining developments in 1941 on the gold placers of various creeks in the northern Copper River region of southeast-central Alaska, on a stibnite lode on Tok River, and gold lodes in the Nabesna district.

Copy seen: DLC.

36296. MOFFIT, FRED HOWARD, 1874- . Mining in the Valdez Creek placer district. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1913. Bulletin, 1914, no. 592, p. 307-308)

Describes the mining developments in the gold placer deposits of Valdez Creek,

a headwater tributary of the Susitna River, south of the Alaska Range in central Alaska.

Copy seen: DLC.

36297. MOFFIT, FRED HOWARD, 1874- . The Nome region. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1906. Bulletin, 1907, no. 314, p. 126-45, maps, diagrs.)

Contains descriptions of the general and economic geology of the Nome region. Bismuth, antimony, gold and graphite lode deposits are described, and also the unconsolidated buried gold placer deposits of the first, second, and third beaches of the Nome tundra. General developments in the region are also summarized.

Copy seen: DLC.

36298. MOFFIT, FRED HOWARD, 1874- . Notes on copper prospects of Prince William Sound. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1907. Bulletin, 1908, no. 345, p. 176-78, map)

Summary of developments on the copper mines and prospects on Prince William Sound in 1907.

Copy seen: DLC.

36299. MOFFIT, FRED HOWARD, 1874- . Notes on the geology of upper Nizina River. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1938. Bulletin, 1930, no. 813, p. 143-63, fold. map)

Presents the results of a field investigation by the author in 1927 of the geology of the upper Nizina River in southeastern-central Alaska south of the Wrangell Mts. (approx. 61°30' N. 142°40' W.) Summarizes the present and previous work and describes the physical features and geology of the region. Geologic map 1:250,000, contour interval 1,000 ft., is given.

Copy seen: DLC.

36300. MOFFIT, FRED HOWARD, 1874- . The occurrence of copper on Prince William Sound. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1923. Bulletin, 1925, no. 773, p. 141-58)

Presents the results of a study of the copper sulfide deposits of the Prince William Sound region by the author, based largely on the published and unpublished reports of previous investigators especially B. L. Johnson. Discusses the geology of the region, the character of the sulfide deposits, the minerals of the copper deposits, the latter's origin, and the age of mineralization.

Copy seen: DLC.

36301. MOFFIT, FRED HOWARD, 1874- . Preliminary report on the Broad Pass region. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1913. Bulletin, 1914, no. 592, p. 301-305, fold. map)

Describes the geology and mineral resources of this area (approx. 63°20' N. 149°05' W.) in the Alaska Range in central Alaska, following the author's field investigation in 1913. Earlier investigations (since 1898) are noted; data on possible railway routes, vegetation and game are given. Mineral resources include placer gold in small quantities and some copper in lava flows. Author's subsequent report on the region is Arctic Bibliography, No. 11587.

Copy seen: DLC.

36302. MOFFIT, FRED HOWARD, 1874- . Recent mineral developments in the Copper River region, Alaska. Washington, D. C., U. S. Govt. Print. Off., 1937. ii, 97-109 p., sketch map. (U. S. Geological Survey. Bulletin 880-B. Mineral resources of Alaska, 1935)

Presents the results of author's 1935 field investigation of the geology and mineral developments in the Copper River region, southeast-central Alaska. Describes the developments on the copper lodes and the gold lode and placer properties of the Chitina valley, the gold lode mines in the Bremner River region, developments at the Nabesna gold quartz mine, the placer and lode gold operations in the Chisana district, the gold placer operations in the Chistochina district, and the mining developments in Ahtell Creek.

Copy seen: DLC.

36303. MOFFIT, FRED HOWARD, 1874- . The Suslota Pass district, upper Copper River region, Alaska. Washington, D. C., U. S. Govt. Print. Off., 1933. ii, 137-62 p., fold. map part. col. (U. S. Geological Survey. Bulletin 844-C. Mineral resources of Alaska, 1931)

Gives results of the author's geologic reconnaissance in 1931 of the Suslota Pass district, the eastern part of the Alaska Range between Mentasta Pass and the Nabesna River in east-central Alaska. Describes briefly the relief and drainage, climate and vegetation, population; then, in detail, the geology, and mineral resources (gold lodes and placers). Geologic reconnaissance map 1: 250,000, contour interval 200 ft., is included.

Copy seen: DLC.

36304. MOFFIT, FRED HOWARD, 1874- . The Taral and Bremner River districts. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1911. Bulletin, 1912, no. 520, p. 93-104, fold. map)

Describes the geography and geology of the mountainous region between the Bremner and Chitina Rivers, east of the lower course of the Copper River and on the border of the St. Elias icecap. The mineral resources are gold and copper. Gold in commercial quantities has been found only in placer gravels in the slate-graywacke area of the Bremner River basin. Some low-grade gold quartz veins are known. The copper deposits are associated with igneous rocks in the greenstone area east and south of Taral. A variety of copper minerals occur in the region—chalcopryite, chalcocite, bornite, covellite, chrysocolla. The distribution and character of the deposits are discussed, and descriptions given of copper deposits on Surprise, Falls, and Canyon Creeks. Result of reconnaissance by the writer and T. Chapin in 1911; the former's bulletin on the area is listed as Arctic Bibliography, No. 11577.

Copy seen: DLC.

36305. MOFFIT, FRED HOWARD, 1874- . Upper Copper and Tanana Rivers, Alaska. Washington, D. C., U. S. Govt. Print. Off., 1936. ii, 135-43 p., fold. map. (U. S. Geological Survey. Bulletin 868-C. Mineral resources of Alaska, 1934)

Presents the results of a field investigation by the author in 1934 in that section of the Alaska Range between the Nabesna and Big Tok Rivers (approx. 63° N. 143° W.) in east-central Alaska, in the drainage areas of the upper Copper and Tanana Rivers. The report outlines the present investigation and describes the geography, geology, mining and prospecting in the area in 1933 and 1934, including gold placer prospecting in the Cheslina River in 1933, discovery of placer gold on Ahtell Creek in 1934, and the 1934 season's operations of the Nabesna gold quartz lode mine.

36306. MOFFIT, FRED HOWARD, 1874- . The upper Susitna and Chistochina districts. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1910. Bulletin, 1911, no. 480, p. 112-27, maps, incl. 1 fold., diagr.)

Describes the Valdez Creek and Slate Creek placer gold fields in the southern foothills of the Alaska Range at the headwaters of the Susitna and Chistochina Rivers, and the mining developments in these regions in 1910. Description of the geographic and geologic features of the general region is followed by separate descriptions of the two regions. Trails and transportation, mail facilities, geography, general and economic geology, and mining developments in each region are given. Results of reconnaissance by the writer and B. L. Johnson in 1910; former's bulletin on this area is listed as *Arctic Bibliography*, No. 11581.

36308. MOIR, D. R. Beach ridges and vegetation in the Hudson Bay region. (North Dakota Academy of Science. Proceedings, July 1954. v. 8, p. 45-48) 2 refs.

The Hudson Bay Coastal Plain is characterized by a series of conspicuous beach ridges paralleling the coast and extending inland 60-100 miles. Often several miles long, the ridges are built up by a combination of gentle slope, onshore winds, abundance of fine material, and long, straight or gently-curved shore, and are gradually removed from the zone of wave action by postglacial uplift.

Three vegetation zones are recognized: recent beach ridges with sparse vegetation of *Mertensia maritima*, *Elymus arenarius* var. *villosus*, *Arenaria peploides*; an intermediate zone to two miles inland with low-growing woody shrubs; the third zone, extending several miles inland, has mature spruce forests and open areas of lichen (*Cladonia* spp.) or moss cover.

Note on volcanoes in Kamchatka, especially Klyuchevskaya Sopka and its eruption in 1945; based on observations of the Geological Institute of the Academy of Sciences' expedition in 1945, and those of the Academy's aerological expedition in 1946. The latter established that the number of volcanoes in Kamchatka reaches 100, and that 18 of them are active. A col. photograph of Klyuchevskaya Sopka is inserted, and its caption contains information on the Soviet scientists' descent into the crater of the volcano.

Buletēn', 1931. v. 1, no. 9-10, p. 185-87) Text in Russian. **Title tr.:** Scientific results of the first arctic flight on the airship *Graf Zeppelin*.

Notes on scientific observations during the flight to Franz Joseph Land, Severnaya Zemlya, Taymyr Peninsula and Novaya Zemlya in July 1931; the geographical observations of R. L. Samolovich, and meteorological observations, including investigation of the upper air by radiosonde of the author's construction, are mentioned and the feasibility of extended arctic exploration by airship is claimed. **Copied seen:** DLC.

36312. MOLETT, WILLIAM E. Recent developments in polar navigation. (Navigation, Sept. 1954, v. 4, no. 3, p. 118-21)

Developments and improvements which have increased the accuracy of polar navigation on Operation Ptarmigan missions by more than 50 percent in two years are outlined. A special hook for sights below 15° which holds the sextant more than one inch higher than the regular hook, sextant check at flight altitude against a reliable radar fix, navigator cross-checking, recording of gyro readings and graphing gyro precession by the radar operator, and an improved sky compass, have improved celestial work. Alignment of radar antennas is checked prior to each mission. The average heading method when steering by a precessing gyro has been adopted as well as forms for keeping a clear record of routine information. A comparative study of radar winds and Bellamy wind information is being conducted. *Copy seen:* DLC.

36320. MONTGOMERY, HUGH, and others. Experimental immersion foot, 1. The effects of prolonged exposure to water at 3° C. on the oxygen tension and temperature of the rabbit leg. (Journal of clinical investigation, Mar. 1954. v. 33, no. 3, p. 361-69, illus., tables) 12 refs. *Other authors:* O. Horwitz, G. Pierce, and A. Sayen.

The temperature in muscle and subcutaneous tissue generally decreased to levels characteristic of markedly reduced blood flows. In some instances there were fluctuations in the tissue temperatures which were found to be associated with leg motion. Oxygen tension of the tissues was usually depressed due to a tendency to a greater reduction in oxygen supply than in oxygen utilization; when such animals inhaled oxygen, the oxygen tension of the cooled tissue rose to, or above, the normal level. *Copy seen:* DLC.

36321. MONTGOMERY, MARGARET ROBINSON, 1911- The climate of Labrador and its effects on settlement. A thesis presented to the Faculty of the Department of Geography, McGill University, in partial fulfillment of the requirements for the degree Master of

Arts. Montreal, Oct. 1949. 212 p. illus., maps, charts, graphs, 15 tables. Type-script. 69 refs.

Relief, structure, surrounding seas, and vegetation of the Labrador-Ungava Peninsula are considered with relation to climate. Climatology is discussed in detail as to: primary and secondary circulation features, winds, temperature, precipitation, cloud and fog, humidity, continentality. Place of the Labrador climate within the Köppen and the Thornthwaite climatic classifications is examined, and the relation of climate to fauna, vegetation, and settlement is briefly discussed. *Appendices* contain: monthly climatic summaries for 25 stations in northern Quebec and Labrador; temperatures with winds from various directions for Hopedale, Zoar, Nain, and Hebron; depth of snow on the ground Jan.-June, Nov.-Dec. for Belle Isle, Goose Bay, Lake Manouan, Lake Norman, Sandgirt Lake.

36336. MOROZEWICZ, JÓZEF MAR- IAN. Komandory; studjum geografi- czno-przyrodnicze. The Commander Is- lands; a study, geography and natural history. Warszawa, Wydawn. Kasy im.

Mianowskiego, 1925. xiv, 230 p. 8 fig., 36 plates, tables, 2 col. fold. maps. Text in Polish. English translation only of title and (p. 227) contents table.

A monographic study, chiefly geological description of the islands, based on published works of B. Dybowski, L. Stejneger, and others, and on unpublished material from the Geological Expedition in 1903; this, sponsored by the Russian Dept. of Mines, consisted of the author (leader), L. Konfushevskii, mining engineer, and three "qualified gold prospectors." An introductory sketch of the discovery and investigation of the Commanders (p. vii-xiv) is followed by a geographical outline of the islands (p. 1-68), their relief, climate (with tabular data on air temperature and pressure, humidity and cloudiness collected by the author's party daily June 26-Oct. 1, 1903), flora, wildlife, and the Aleut population. The geological structure of Bering and Copper Islands is treated in detail (p. 69-129) with geologic maps (approx. 1:275,000) prepared by the writer on Stejneger's topographic base. Structure of the group is considered (p. 130-50) in relation to the character of the Bering Sea bottom, the Aleutians, Pribilofs, Alaska and Kamchatka, with conclusion that it is of transition character: "in short, the Commanders are a fragment of a continent built of North American rock materials, but in East Asiatic style" (p. 148). The petrography of the Commanders (p. 151-80), mainly pre-Oligocene effusive and intrusive and Oligocene and Miocene sedimentary rocks, is characterized; and the principal minerals described (p. 197-224) with emphasis on native copper and copper ores, but without conclusion as to their economic possibilities. Photographs (36) of various features and landscapes of Bering and Copper Islands are included.

Trudy, nov. seriia, vyp. 72) Text in Russian and (p. 44-88) in German. **Title tr.:** Native copper deposits on the Commander Islands.

Report on the author and Konfushevskii's geological and mineralogical investigation of the Commander Islands in 1903, to check rumors of copper and

gold there for the Dept. of Mines (Gornyi Departament). No gold, but two native copper deposits were found on Mednyy Island. Of no economic importance they are considered of scientific interest. The island's northwest massif is described as consisting of four distinct geologic "formations," soda rhyolite, the oldest and most important comprising about seven-eighths, basaltic tuff about one-eighth of it; andesitic tuff and basalt dikes playing a minor role. Occurrence of the copper, its genesis, and chemical constituents of the associated rocks are discussed, and results of analysis given. The ore may be compared in petrographic character and genesis with the Lake Superior deposits of northern Michigan.

36338. MOROZOV, S. Blizkaia Arktika; iz dnevnika. (Novyi mir, Sept. 1954. god 30, no. 9, p. 143-62) Text in Russian. **Title tr.:** The near Arctic; from diaries.

Due to modern means of communication and transportation, to systematic exploration of polar regions, and to general interest, the remote Arctic is much nearer to everybody in the U.S.S.R. today, than it was before the Revolution. The author, who participated as a journalist in several arctic expeditions, illustrates this statement by sketches of his flight in 1954 from Moscow to Dikson Island, and thence to the drifting station "North Pole-3," headed by A. F. Trishnikov, and to the camp of Cherevichnyi's party in the vicinity of the North Pole. He notes the supplies and equipment for the expedition assembled on Dikson from all parts of the country; aircraft landings and take-offs on the pack-ice; the construction of the station and conditions of life in camp; the flyers, scientific and technical personnel, and the fitness of

their equipment for work in the Arctic Basin. The visit to Cherevichnyĭ's party by the head of the 1954 High Latitude Expedition, V. F. Burkanov, his second-in-charge V. V. Frolov, Academician D. I. Shcherbakov, M. M. Somov, and I. A. Gakkel', is sketched. Author's notes include further, fragmentary reminiscences of his participation and experiences in the Soviet High Latitude Expedition of April 1948, which, in several small parties, carried out exploration of the Arctic Basin between 80° and 87° N. around the Region of Relative Inaccessibility, made trips to the geographic North Pole, and established the sea depth at the Pole as 4,039 m.; it discovered the submarine range and the (second) arctic magnetic anomaly (p. 149-54). An interview with D. I. Shcherbakov on the significance of the arctic explorations is given (p. 160-62). Author remarks (p. 154-60) upon the Lomonosov Range and on drifting stations "North Pole-2," 1950-1951, and "North Pole-4," 1954.

36342. MOROZOV, S., and I. A. RÛM-KIN. K poslednim parallelâm, I. Khozâeva poliârnykh l'din. (Ogonëk, Aug. 1954, no. 31, p. 25-27, illus., map) Text in Russian. **Title tr.:** Toward the last parallels, I. Masters of the polar ice-floes.

First of a series of popular illustrated sketches on a program to set up several scientific stations on the ice in the Arctic Basin. The so-called Vysokoshirotnaâ arkticheskââ êkspeditsiâ (High Latitudes Arctic Expedition) sponsored by the Main Administration of the Northern Sea Route, under general direction of its chief, V. F. Burkanov, started in Mar. 1954. Its organization and initial stages are described: the establishment of a drifting camp in vicinity of North Pole (headed by I. I. Cherevichnyĭ and M. E. Ostrekin), drifting stations "North Pole-3" (under A. F. Trëshnikov an oceanographer), the authors accompanying the flight to set up this station in April (at approx. 85° N. 180°), and "North Pole-4" (under the meteorologist E. I. Tolstikov, also set up in April, at approx. 75° N. 175° W.). The authors' flight via Cape Chelyuskin and Severnaya Zemlya, search for a site for "North Pole-3," landing on ice at some distance from the spot selected, preparation of an air strip for further landings, etc., are recounted. Scientific personnel and air crew are named. Plan to cross the Arctic Basin in a year-round drift is mentioned. Text map shows drift of stations "3" and "4" in Apr.-July 15, 1954.

Copy seen: DLC.

36343. MOROZOV, S., and I. A. RÛM-KIN. K poslednim parallelâm, II. "Stolitsa vysokikh shirot." (Ogonëk, Aug. 1954, no. 32, p. 15-16, illus., 4 col. plates) Text in Russian. **Title tr.:** Toward the last parallels, II. "Capital of the high latitudes."

Sketch and 19 illustrations of the process of setting up the drifting station "North Pole-3" in Apr. 1954, on an ice island [sic] at approx. 85° N. 180°; A. F. Trëshnikov head, and V. A. Shamont'ev, second in charge of the station. Transport of equipment, etc., by small aircraft, tractor and helicopter from the landing strip 9 km. distant; arrival of the scientific personnel; bathymetric measurements (3,949.5 m.) are presented. Setting up the scientific apparatus, tents, etc. is shown and mention made of prefabricated tractor-drawn housing to come.

36344. MOROZOV, S., and I. A. RĭŮM-KIN. K poslednim paralelām, III. Nad khrebtoom Lomonosova. (Ogoněk, Aug. 1954, no. 33, p. 20-22, 4 illus.) Text in Russian. **Title tr.:** Toward the last parallels, III. Over the Lomonosov Range.

Journalists' notes on an airborne party under I. I. Cherevichnyi, operating within the framework of the High Latitudes Arctic Expedition, 1954; landings were made in small groups at several places over the submarine ridge, termed Lomonosov Range (lying across the Arctic Basin from the New Siberian Islands to the region of the Pole and beyond towards Greenland and Ellesmere); hydrological, bathymetric, zoological and glaciological observations were carried out by one of these groups on an ice island (?) 80 km. from the geographic North Pole. Several members of the party are characterized; the drifting camp of I. I. Cherevichnyi, a visit by the organizational heads of the High Latitudes Expedition, V. F. Burkhanov and academician D. I. Shcherbakov in celebration of May Day, etc., are noted. Soviet explorations at the geographic North Pole in 1948, the claimed discovery of a large ice island by V. M. Perov in 1950, and the drifting station "North Pole-2" under M. M. Somov in 1950-51 are mentioned; some bathymetric data are given: a depth of 4,039 m. at the North Pole, 1,150 m. over the crest of the Lomonosov Range, and more than 2,000 m. on its eastern and western slopes.

36345. MOROZOV, S. Na radiovakhte u polūsā. (Radio, Oct. 1954, no. 10, p. 12-14, illus.) Text in Russian. **Title tr.:** Radio service at the Pole.

Journalist's sketch of his flight from Dikson Island over Cape Chelyuskin

and Severnaya Zemlya to the drifting station "North Pole-3" (1954), and of his two-week stay at the station. The assembling of supplies and equipment for the expedition at Dikson, initial phases of setting up the station on floating ice in the Arctic Basin, and the station's preparation for a long drift are described. Prefabricated houses, gas and radio station, tractor, airplane, cross-country vehicle, helicopter, etc., even boxes of soil for growing vegetables, were delivered by aircraft. The everyday work of the station personnel (two radio operators, aerologist, photographer, mechanic, helicopter pilot, cook) is mentioned. The simultaneous organization of the drifting station "North Pole-4", supplied from Chukotka, is noted. Some particulars on drifting station "North Pole-2" headed by M. M. Somov, 1950-1951, are given in the form of dialogue between participants.

36351. MORRISON, J. P. E. Notes on the genus *Probythinella*; Hydrobiinae. (Nautilus, July 1947. v. 61, no. 1, p. 25-28)

Contains a review of the nomenclature and synonymy of the specific names of this molluscan genus; includes *P. lacustris canadensis*, type locality: Lake Kakiska near the mouth of the Beaver River, west of Great Slave Lake (ca. 61° N.), Mackenzie District.

Copy seen: DSI; MH-Z.

36352. MORRISON, PETER REED, 1919-, and others. Growth and the development of temperature regulation in the tundra redback vole. (Journal of mammalogy, Aug. 1954. v. 35, no. 3, p. 376-86, 3 fig., 4 tables) 15 refs. Other authors: F. A. Ryser and R. L. Strecker.

In *Clethrionomys rutilus dawsoni* during the first 20 days growth, curves were linear with a mean increase of 0.49 gm. per day. Up to the 28th day of life, body temperatures were lower than in adults

even in warm nests and when brooded by the female. When exposed to 0° C. for one to one and one-half hours, 11-12 day-old voles, showed a body temperature ranging from 2.5° to 16° C.; no adverse effects were subsequently noticed in these animals. One the 14th day of life, a great improvement in temperature regulation was noticeable and on the 18th day it was complete. The young do not leave the nest until temperature regulation is well developed.

Contains a discussion of the present status of this fern based partly on material from Yukon and Keewatin.

Copy seen: DLC; MH-G.

36355. MOSHINSKAĪA, V. I. Gorodishehe i kurgany Potchevash; k voprosu o potchevashskoi kul'ture. (In: Chernetsov, V. N., and others, Drevniĭĭ istoriĭa nizhnego Priob'ĭa, pub. in Materialy i issledovaniĭa po arkheologii SSSR, 1953. no. 35, p. 189-220, illus., 12 plates) 30 refs. Text in Russian. **Title tr.:** The ancient stronghold and tumuli of Potchevash; contribution to the question of the Potchevash culture.

Contains description and analysis of archeological objects excavated on the Potchevash Hill, 2 km. from Tobol'sk. Fifteen tumuli were excavated earlier by A. I. Dmitriev-Mamonov, and a site was thoroughly investigated by the writer in 1951. It is a bronze age site, the people knew horses, and the upper cultural layer can be dated 500-400 B.C. The Ust'-Poluy culture, discovered at Salekhard, is derived from the Potchevash.

Copy seen: DLC.

36356. MOSHINSKAĬA, V. I. Keramika Ust'-Polul'skoĭ kul'tury. (*In: Chernetsov, V. N., & others, Drevniĭa istoriĭa nizhnego Priob'ĭa, pub. in Materialy i issledovaniĭa po arkhologii SSSR, 1953, no. 35, p. 107-120, illus. plates*) Text in Russian. **Title tr.:** Ceramics of the Ust'-Poluy culture.

Contains an analysis of ornamented potsherds excavated by V. S. Adrianov at Ust'-Poluy, 3 km. north of Salekhard in 1935-1936. The sherds are classified into three groups (plates 1-3), and compared with ceramics excavated in several other places in the districts of Salekhard and Berezovo. Pottery of Ust'-Poluy type two is found in the region between the mouth of Ob' in the north, the confluence of the Irtysh and the Ob' in the south, and the Ural Mts. on the west; the eastern limit is not established. On pots of this type the ornamentation is placed around the neck of the vessel in horizontal bands, with rough comb and string patterns the most common. There is an obvious relationship between the ceramics of Ust'-Poluy and those of Anan'ino culture, discovered in Kama — Volga region, dated 800-400 B.C. and attributed to the Finno-Ugric peoples.

Copy seen: DLC.

36357. MOSHINSKAĬA, V. I. Material'naĭa kul'tura i khozĭastvo Ust'-Poluĭa. (*In: Chernetsov, V. N., & others, Drevniĭa istoriĭa nizhnego Priob'ĭa, pub. in Materialy i issledovaniĭa po arkhologii SSSR, 1953, no. 35, p. 72-106, 17 illus., sketch map*) Text in Russian. **Title tr.:** The material culture and economy of Ust'-Poluy.

Contains description and evaluation of bone and stone objects, excavated on the right bank of the Poluy River, 3 km. north of Salekhard and preserved at the Muzeĭ antropologii i ėtnografii, Leningrad. The place was discovered in 1932 in the course of construction work, and in 1935-1936, the museum sent a party of archeologists headed by V. S. Adrianov to investigate it. Five sites (dwelling and sacrificial places) were excavated. The tools and implements for hunting, fishing, household use and warfare, are described and classified; among them are bone and stone arrow heads, harpoons, bow ends, war arrows and armor (breast plates), harness for reindeer and dogs, bone scrapers, spoons and combs, tools of men and women, etc. Iron objects were not found. Attention

is given to ornamentation and property marks. The objects are attributed to the Ostyaks and Voguls. Archeological dating is from 400 B. C. to 200 A. D.

Copy seen: DLC.

36358. MOSHINSKAĬA, V. I. Zhi-lishehe Ust'-Polul'skoĭ kul'tury i stoĭanka ėpokhi bronzy v Salekharde. (*In: Chernetsov, V. N., & others, Drevniĭa istoriĭa nizhnego Priob'ĭa, pub. in Materialy i issledovaniĭa po arkhologii SSSR, 1953, no. 35, p. 179-88, 5 illus.*) 6 refs. Text in Russian. **Title tr.:** A dwelling of the Ust'-Poluy culture and a bronze period site at Salekhard.

Contains description of a semi-subterranean dwelling, discovered in 1946 by the members of the Mangazeya expedition with participation of the writer, on a hill near the landing place at Salekhard, on the high right bank of the Poluy River. The rectangular dwelling had an entrance through a tunnel and in many respects is similar to the Paleo-Siberian dwellings. The interior plan resembles that of the summer dwellings of the recent Voguls and Ostyaks. In the dwelling, several implements of bone, stone, and bronze were found; also animal sculptures of clay and ornamented potsherds. This Salekhard site and its ceramics, the technique and ornamentation are investigated, and dated for the late bronze age (about 1500 B. C.). Numerous objects were secured on the same hill by D. N. Redrikov in 1928-1929, and are now in Muzeĭ antropologii i ėtnografii, Leningrad.

Investigations were undertaken in 1948 by a four-man U. S. Geological Survey party (led by the writer) in the fork of the Yukon and Tanana Rivers, approx. 65° N. 150°-152° W. Areas studied included the Hot Springs Dome lead-silver deposit, Tofty tin belt, Rough-top Mountain - Boulder Creek area, Eureka and Rampart areas. Radioactivity surveys were largely ineffectual because thick tundra and muck cover conceal the bedrock. No commercial sources of radioactive minerals were found.

36378. MURATOV, MIKHAIL VASIL'EVICH, 1892- . Skvoz' tumany i l'dy; pokhod Semena Dezhneva. (Vokrug sveta, Mar.-Apr. 1946. no. 3-4, p. 62-63) Text in Russian. **Title tr.:** Through fog and ice; the expedition of Semen Dezhnev.

Brief popular account of Dezhnev's expedition in 1648-1650 by boat from Nizhne-Kolymsk around the cape which now bears his name, to the Anadyr'; his companions, Gerasim Akundinov, Fedot Alekseev, as well as Semen Motara, who met the party at the Anadyr', are briefly mentioned; the significance of the feat is stressed. **Copy seen:** DLC.

36379. MURDOCH, JOHN, 1852-1925. Note on eider ducks. (Zoologist, Mar. 1887. ser. 3, v. 11, no. 123, p. 108)

Contains the writer's observations on the king eider, *Somateria spectabilis*, at Point Barrow, northern Alaska, in 1881-83. "If a duck is shot down, the drake almost invariably follows her to the ice, apparently supposing that she had alighted."

Copy seen: DSI; MH-Z.

36380. MURDOCH, JOHN, 1852-1925. Sinew-backed bow of the Eskimo. (Anthropological Society of Washington. Transactions, 1885. v. 3, p. 168-71)

The technique of bow-making utilizing reindeer sinew is described. Bows of this form were still to be found (in the 1880's) on Baffin Island, along the treeless arctic coast from the Mackenzie River to Bering Strait, and on St. Lawrence Island. **Copy seen:** DLC.

MURDOCH, JOHN, 1852-1925, see also Allen, J. A. Murdoch on the birds of Point Barrow. 1886. No. 33219.

MURDOCH, JOHN 1852-1925, see also Merriam, C. H., and others. Preliminary report of the Committee on bird migration. 1885. No. 36187.

36381. MURDOCH, PETER E. The old shipwreck. (Beaver, Mar. 1954. Outfit 284, p. 42-43, 2 illus.)

Contains brief description of a wreck found in Maud Bight on the north shore of Bylot Island ($73^{\circ}20'$ N. $78^{\circ}30'$ W.) during a trip made by the author May 6-21, 1953, from Pond Inlet, Baffin Island. A reference in McClintock's *Narrative* of his 1858 voyage indicates that the wrecked vessel had been there at least as early as 1820 and was probably a whaler. **Copy seen:** CaMAI; DLC.

36382. MURDOCK, GEORGE PETER, 1897- . Ethnographic bibliography of North America. 2nd edition. New Haven, Human Relations Area Files, 1953. xvi, 239 p., map. Process print. (Behavior science bibliographies)

Photographic reproduction of the first edition, 1941 (*Arctic Bibliography*, No. 11898), to which is appended (p. 175-236) new and corrected references, prepared by Mrs. Allison Butler Matthews and Mr. John Musgrave. Approximately four hundred references in the new section (p. 175-84), most, but not all published since 1940, deal with natives of regions covered by *Arctic Bibliography*: Arctic Coast, Mackenzie-Yukon, Northwest Coast. **Copy seen:** DSI.

36383. MURIE, ADOLPH, 1899- . Wilderness north. Alaska's national parks and monuments . . . and our last unexplored wilderness. (Pacific discovery, May-June 1953. v. 6, no. 3, p. 2-7, 13 illus.) ref.

Contains brief popular descriptions of Mt. McKinley National Park, Katmai National Monument, Glacier Bay National Monument, and landscape and wildlife seen during journeys in Southeast Alaska. Problems of land planning and provision for future game preserves and parks are briefly discussed.

Copy seen: DLC.

36384. MURIE, JAMES. Researches upon the anatomy of the Pinnipedia, pt. I. On the walrus *Trichechus rosmarus* Linn. (Zoological Society of London. Transactions, 1871, pub. 1872. v. 7, pt. 6, p. 411-64, 34 fig. incl. 30 on plates 51-55 at end of vol.)

Detailed study of this species, with a survey of earlier studies, information and data on its morphology, mouth and dentition, viscera and reproductive organs, vascular and respiratory system, muscles; taxonomic and biologic notes.

Copy seen: DLC.

36385. MURIE, OLAUS JOHAN, 1889-
Additional records of *Cuculus* in North America. (Condor, Mar.-Apr. 1952. v. 54, no. 2, p. 114)

Contains two records of typical cuckoos: a specimen from St. Lawrence Island collected by H. Ataglook near Gambell in July 1935; a specimen collected by J. Steenis at Rat Island. The first, identified earlier as *C. canorus bakeri* is referred now to *C. saturatus horsfieldi*.

36386. MURIE, OLAUS JOHAN, 1889-
Larus ridibundus sibericus from the Aleutian Islands. (Auk, Apr. 1945. v. 62, no. 2, p. 313)

Contains descriptive notes on the Siberian black-headed gull, shot in Kiska Harbor, Aleutian Islands on June 4, 1937; the first record of this bird for North America.

Copy seen: DSI; MH-Z.

36387. MURIE, OLAUS JOHAN, 1889-
Nesting of the snowy owl. (Condor, Jan.-Feb. 1929. v. 31, no. 1, p. 3-12, illus.)

Contains observations on the life of the snowy owl (*Nyctea nyctea*) made in the course of an expedition in summer 1924 to the Hooper Bay region near the mouth of the Yukon River, Alaska. Notes on the nests, nesting habits, incubation, young, mortality and food of this arctic species are included.

Copy seen: DSI; MH-Z.

36388. MURIE, OLAUS JOHAN, 1889-
The nighthawk in Alaska. (Auk, 1925. v. 42, no. 2, p. 270-71)

Contains a record of a skin of night-hawk (*Chordeiles v. virginianus*) received in Jan. 1924; it was obtained by an Eskimo chief, Nulayuk, in 1923 on the Alatina River, about ten miles north of Allakaket; three other specimens were known from Yukon Territory.

Copy seen: DSI; MH-Z.

36389. MURIE, OLAUS JOHAN, 1889-
Notes on the Alaska chickadee. (Auk, Oct. 1928. v. 45, no. 4, p. 441-44)

Contains a review of previous Alaskan records, and the author's observations on the Alaskan chickadee, *Penthestes cinctus alascensis*, made in Feb. 1921, between Fairbanks and Circle, Alaska, also in Old Crow River district in Yukon Territory in summer 1926. "Observations on the Old Crow River indicate that, at least in summer, *alascensis* and *hudsonicus* are separated by habitat

choice even though their general ranges may greatly overlap."

Includes an account of record low temperatures endured by the white man, with such from North America, and Siberia. Author's statements were challenged by J. Hann (*Arctic Bibliography*, No. 29542).

Copy seen: DLC.

36400. NADEAU, EUGÈNE. À l'origine des missions de la baie James. (Revue, de la Université d'Ottawa. Jan.-Mar. 1954. v. 24, no. 1, p. 53-65) 11 refs. Text in French. *Title tr.:* Origin of the James Bay missions.

Contains impressions of the James Bay region and an historical sketch, with extensive quotation from writings of the Oblate fathers, of the missions established there from 1892.

Copy seen: DLC.

36401. NAFE, JOHN PAUL, 1888- , and K. S. WAGONER. The dependency of cold upon vascular action; studies with nerve block. (American journal of psychology, 1937. v. 49, p. 636-44, illus.) 7 refs.

Contains an account of experiments involving cooling of the hand with water (20° C.) and nerve blocking. The results appear to confirm the hypothesis that sensitivity to cold is a function of afferent impulses set off by the contraction of arterioles.

Copy seen: DSG.

36402. NAFE, JOHN PAUL, 1888- , and K. S. WAGONER. The effect of adaptation upon vascular reactions to thermal stimuli. (American journal of psychology, 1937. v. 49, p. 645-49, illus.) 4 refs.

An investigation of vascular changes accompanying feelings of warm and cold, induced as aftereffects of adaptation to cold and warmth, respectively. The results favor correlation of thermal experience with vascular change rather than with specific receptors.

Copy seen: DSG.

36403. NAFE, JOHN PAUL, 1888- . The relation of warmth and cold to vaso-constriction and dilation. (Psy-

chological bulletin, 1934. v. 31, p. 709-710)

Contains summary of a paper on contralateral effects of placing a hand in warm or cold water. In the latter case there is, within three seconds, a rise of the threshold for cold and a lowering of the threshold for warmth in the contralateral hand.

Copy seen: DSG.

36404. NAGATA, TAKESI, and T. OGUTI. Ionospheric storms in the auroral zone. (Japan. Science Council. Ionosphere Research Committee. Report of ionosphere in Japan, 1953. v. 7, no. 1, p. 21-28, illus.) 14 refs.

"Characteristics of the daily and monthly variations of abnormal changes of foF2 associated with magnetic storms at College, Alaska [64°51' N. 147°50' W.] are statistically examined. The results are as follows: (i) foF2 decreases due to magnetic storms so far as F₂-layer in the auroral zone is situated in the sunlit region, while it increases in dark hours. (ii) The said change of foF2 begins usually just after the commencement of magnetic storm, and reaches the state of saturated activity a few hours later. (iii) Theoretically, the foF2 depression in the sunlit times may be attributed to the expansion of F₂-layer due to heating caused by impinging corpuscles."—*Meteorological abstracts & bibliography*, Mar. 1954. v. 5, no. 3, p. 420-21.

NAGNIBEDA, V. ĪĀ., see also Sibirskiy kray. Statisticheskii otdel. Narymskii kraĭ. . . . 1927 No. 37416.

36406. NAGORNYĬ, S. G. Georgii Sedov. Moskva, Gos. izd-vo geograf. lit-ry, 1950. 207 p. front. (port.), illus., 2 fold. maps. 81 refs. Text in Russian. **Title tr.:** Georgii Sedov.

Popular biography of Georgii Īakovlevich Sedov, 1877-1914, based partly on unpublished materials in public and private archives, and on narratives of Sedov's relatives and friends. His family life, education and naval career are briefly noted; his expedition in 1909 to Nizhne-Kolymsk to chart the Kolyma River mouth and find a channel for navigation is recounted in some detail (p. 3-26), as well as his expedition in 1910 to Novaya Zemlya to map and describe Krestovaya Guba (p. 42-48). The plan, preparation and main events of his polar expedition on the *Sv. Foka*, 1912-1914, till his death on Rudolf Island, are presented, as well as the aftermath of the expedition (its financial troubles, investigation of the supposed murder of Sedov, etc.). The significance of this expedition is discussed in the light of previous and later arctic explorations. The text, fully illustrated with photographs and drawings, is extensively documented by notes and references (p. 171-206); fold. maps show: (1) routes of Sedov's expedition of 1912-1914; (2) routes of the main Soviet arctic flights, voyages and drifts in 1932-42.

Though popular in style, this work is much fuller and more informative than the author's earlier publication of the same title, listed as *Arctic Bibliography*, No. 11944. **Copy seen:** DLC.

36409. NAMIAS, JEROME, 1910- . The great Pacific anticyclone of winter 1949-50: a case study in the evolution of climatic anomalies. (Journal of meteorology, Aug. 1951. v. 8, no. 4, p. 251-61, 23 text maps, 3 graphs, table) 11 refs.

"The sea-level and 700-mb circulations over the North Pacific and United States from Dec. 1949 to Mar. 1950 are studied with the help of daily charts and means for five-, fifteen-, and thirty-day periods. As the period of averaging increases . . . a remarkably regular evolution emerges as a vast warm anticyclone moves in a great arc from the southeast Pacific into the Bering Sea and Canadian Yukon. The influence of this mean anticyclone on Pacific storm tracks and anomalies over the United States is described." The long life of the cell is not explained but relevant physical facts are presented, and an hypothesis suggested to account for motion of the anti-cyclone and to explain variations in atmospheric circulation giving rise to climatic anomalies of long duration.—From author's abstract. Maps show cyclone and anticyclone tracks in the Gulf of Alaska, Bering Sea, northern Alaska, and Yukon Territory.

When pupae of this parasite were kept at low temperature ($10 \pm 3^\circ \text{C}$.) for 10-75 days, the emerging adults were dark gray to jet black, as against distinctly brown individuals obtained from unchilled pupae. Similar cases among insects and the probable physiology of the phenomenon, are discussed.

Contains a discussion of the present status of *Aedes nigripes*, a mosquito described by Zetterstedt in 1840 as *Culex nigripes* from Greenland. The

writer examined two specimens (one male, one female) from Greenland in the Zoologiska Institutionen in Lund, Sweden, with labels in Zetterstedt's handwriting. "The specimens coincide with the description in *Insecta Lapponica*, 1840, p. 807, and they are evidently the type specimens" (p. 87). Descriptions and photograph of them are added. **Copy seen:** DA; MH-Z.

36415. NAUMOV, D. V. Nekotorye dannye o zhiznennykh tsiklakh metageneticheskikh meduz. (Akademiia nauk SSSR. Doklady, 1951. nov. seriia, t. 76, no. 5, p. 747-50, illus.) Text in Russian. **Title tr.:** Some data on the life cycle of some metagenetic medusae.

Contains results of a study carried out on the Murmansk Biological Station in the summer of 1950. The author succeeded in obtaining polypoid generation of four species of medusae, *Stauraphora mertensi*, *Tiaropsis multicirrata*, *Sarsia princeps* and *S. tubulosa*, which is described in this paper. The experiment proves that the life cycle of some hydrozoans consists of the alternation of polypoid and medusan generation.

36416. NAVAL AVIATION NEWS. How cold is cold? Arctic elements offer challenge; airmen's knowledge can meet it. (Naval aviation news, Mar. 1954. p. 1-5, 12 illus.)

Contains general discussion of operations and survival in arctic regions based on the experiences of Operations Nanook, Highjump, and Skijump. Precautions are offered for working and clothing in low temperature, and for food, shelter, etc. when aircraft forced down. The construction of an airfield in two months from virgin snow by a Navy engineer and ten men is cited. **Copy seen:** DLC.

36417. NAVAL AVIATION NEWS. Ice breakup studies made. (Naval aviation news, Oct. 1954. p. 23, illus.)

Brief account of assistance rendered by Navy helicopters and frogmen during passage of the Navy ice-breaker USS *Burton Island* and the Coast Guard ice-breaker USS *Northwind* through the Bering Sea. Frogmen assisted scientists in checking depth of ice fields, tested photographic equipment designed for cold weather use, blew up ice floes to determine ice breakup, and tested other special equipment. **Copy seen:** DLC.

36418. NAVAL AVIATION NEWS. Old man winter says "Time to get on the (snow) ball". (Naval aviation news, Oct. 1954, p. 18-19, illus.) 20 refs.

Contains checklist for pilots (20 responsibilities) and checklist for maintenance crews (14 responsibilities) of squadrons operating under cold weather conditions. Various publications and training films on the subject of flight and ground problems encountered in winter operations are listed. **Copy seen:** DLC.

36419. NAVARRE, P. Une épidémie de névralgie céphalique due au froid. (Annales d'hygiène publique, industrielle, et sociale, Nov.-Dec. 1947. v. 25, p. 274-77) Text in French. **Title tr.:** Epidemic of facial neuralgia due to cold.

An article on the recrudescence of facial or head neuralgias during the winter 1946-47, with information on the weather; symptoms and cause of the disease; treatment, etc.

Copy seen: DSG.

36420. NAVARRE, P. Froid et maladies infectieuses. (Annales d'hygiène publique, industrielle et sociale, Jan. 1940. v. 18, p. 17-19) Text in French. **Title tr.:** Cold and infectious diseases.

General article on cold as factor in disease, especially in respiratory and pulmonary disease; in diminution of resistance; in inflammations, etc.

Copy seen: DSG.

36421. NAVIGATION. Un nouveau système de détection des icebergs. (Navigation, Paris, July 1953. v. 1, no. 3, p. 99) Text in French. **Title tr.:** New system of iceberg detection.

Contains note on an instrument, invented at Woods Hole Oceanographic Institution, which may be able to detect icebergs when thick fog or clouds prevent visual observation. The device measures length of the radiation wave emitted by the sea and compares it with a sample of sea water of known temperature contained in the instrument.

Copy seen: DN-HO.

36422. NAVIGATION. Reactions of the compasses of the R. C. M. P. schooner "St. Roch" when navigating arctic waters. (Navigation, Dec. 1946. v. 1, no. 4, p. 87-90, text map)

Deals with excerpts from a report by H. A. Larsen on experience during voyages of the Royal Canadian Mounted Police schooner *St. Roch* 1944. Certain compass reactions noted are described

here. Observations of magnetic influences seem to indicate the existence of the magnetic pole on Boothia Peninsula instead of on the Sverdrup Islands as reported by the *Aries* flight of 1945.

Copy seen: DLC.

36423. NEARY, I. A northern adventure. (Canadian Army journal, Dec. 1948. v. 2, no. 9, p. 1-7, sketch map)

Contains account of a manhunt by the Royal Canadian Mounted Police, Jan. 1-Feb. 17, 1932, southwest of Aklavik, in the Yukon Territory - Mackenzie District border region, for Albert Johnson ("the mad trapper of Rat River") charged with trapping without a license and interfering with trapping activities of the Indians. In the course of the hunt several were wounded and two killed, including the fugitive. Author was at that time Warrant Officer in charge of Royal Canadian Signals Radio Station in Aklavik. **Copy seen:** DLC.

36424. NECHIPORENKO, G. P. Morzhovyy promysel na Chukotke. (Ékonomicheskaja zhizn' Dal'nego Vostoka, 1927. god 5, no. 6-7, p. 169-77, tables) Text in Russian. **Title tr.:** The walrus industry on the Chukotsk Peninsula.

Contains a review of walrus hunting to the end of the 19th century on the basis of accounts of Chukchis and Eskimos, together with statistical data for 1919-1922. Eight principal hunting grounds are mentioned; the walrus habits, their herds and travel, conditions for a successful hunt, native hunting technique and disposal of the killed animals, etc., are outlined. About 1,300 animals were killed by natives in 1922 (about 15 percent of the animals wounded, are lost in the water). The number of walrus has been considerably depleted by commercial hunters from the U. S. and Canada who take only tusks, discarding the rest of the body.

36425. NEDERLANDSCH AARDRIJKSKUNDIG GENOOTSCHAP, Amsterdam. Russisch onderzoek in het Arctische gebied. (Nederlandsch aardrijkskundig genootschap, Amsterdam, Tijdschrift, Oct. 1954. Tweede reeks, deel 71, no. 4, p. 357-58) Text in Dutch. **Title tr.:** Russian research in arctic regions.

Contains note on article from *Pravda*, Apr. 29, 1954, no. 119 (13052) on work of Arctic Institute, U. S. S. R., expeditions and scientific stations in the

Arctic Basin since 1948-49. Discovery of the Lomonosov Range on the floor of the Arctic Basin, meteorological and oceanographic work, magnetic anomalies found, research on deep sea fauna, and scientific work in connection with the operation of the Northern Sea Route are briefly described. **Copy seen:** DGS.

36426. NEES, LOUIS A. Pile foundations for large towers on permafrost. New York, Nov. 1951. 10 p. illus., diags., graphs, tables. (American Society of Civil Engineers. Proceedings. v. 77, separate, no. 103)

Concrete in the foundation should be reduced to a minimum in tower construction in the Arctic. Steel pilings were tested for adequate design and adhesion to the permafrost under uplift stresses. Test apparatus is described. Tests were made in soils of various moisture content and temperatures; they showed that adhesive force increased with decreasing moisture content and decreased with decreasing density until a critical value was reached. An adhesive force equivalent to 20 lb./sq. in. could be used as a safe equivalent for steel piles in all except highly organic and very dry soils. The design adopted is described. It requires a minimum embedment of 20 ft. and concrete pad under insulating blanket against heat conduction. From *Meteorological abstracts and bibliography*, Oct. 1954, v. 5, no. 10, and SIPRE.

Contains a synopsis of 35 species of herbaceous genus *Antennaria* inhabiting North America, with synonyms, diagnoses of seven new species and subspecies, descriptions, critical notes and type localities. At least six of the species are native to Alaska, Aleutian Islands and northern regions of Canada; one "in alpinis Lapponiae" and one from West Greenland are briefly described in the footnote on p. 699.

Copy seen: DSI; MH-Z.

36435. NELSON, M. G., and R. J. MARSHALL. The syndrome of high-titre cold haemagglutination. (British medical journal, Aug. 8, 1953. no. 4831, p. 314-17, illus., tables) 21 refs.

Contains a study of two cases, males 47 and 40 years old, which readily developed the Raynaud phenomenon and intravascular hemolysis when exposed to cold. In addition one showed bilateral,

symmetrical gangrene of finger tips and hemolytic anemia, the other hemoglobinuria. Both had sera with cold agglutinins of high titre. Treatment was unsatisfactory. **Copy seen:** DSG.

36436. NELSON, URBAN C. Northern record of nesting of red-necked grebe. (Condor, July-Aug. 1953. v. 55, no. 4, p. 220)

Contains notes on nesting of a pair of red-necked grebes (*Colymbus grisegena holboellii*) found by D. Walsh, July 18, 1949, on the Itkillik River near its junction with the Colville, northern Alaska. **Copy seen:** DSI; MH-Z.

36437. NELSON, URBAN C. Waterfowl breeding ground survey, 1953 in Alaska. (In: U. S. Fish and Wildlife Service. Waterfowl populations and breeding conditions, summer 1953, pub. 1954. Special scientific report: Wildlife no. 25, p. 1-6, 6 tables)

An aerial survey was carried out in summer 1953 (continuing local surveys begun in 1949, cf. *Arctic Bibliography*, No. 12188) to secure an Alaska-wide index to waterfowl (duck, goose, brant) populations. Changes from previous years' sampling methods are described. Other projects included nesting studies, banding, and collection of hatching and production data, in the Minto Lakes area near Fairbanks, Copper River delta, Fort Yukon Flats on upper Yukon, and Lower Yukon-Kuskokwim delta. Tables show size of clutch and brood, species composition, numbers and species banded.

36450. NEWS OF NORWAY. Washington, D. C., Jan. 17, 1941- *in progress.*

Weekly four-page publication of the Norwegian Information Service, issued from the Norwegian Embassy in Washington, D. C. Contains current news on political, social, cultural, economic, and scientific events in Norway, also short lists of books and articles. Northern Norway and Svalbard frequently appear in notices of arctic expeditions, fisheries, political activities in the North, Lapps and reindeer, construction in northern towns, transportation, etc. Some of the recent articles are listed below.

File seen: DLC.

36451. NEWS OF NORWAY. Arctic coal mines icebound as shipping season ends. (News of Norway, Nov. 25, 1954. v. 11, no. 42, p. 167)

Shipping season from Vestspitsbergen lasts from mid-May to early Nov. During this period in 1954, 345,000 metric tons of coal were shipped from the two Store Norske Spitsbergen Kulkompani A/S mines at Longyearbyen (Isfjorden), of which 130,000 tons were sold abroad, 150,000 shipped to northern, and the

rest to southern Norway. A brief history of coal mining on Vestspitsbergen is given. These two Norwegian mines and two Russian mines, at Grumantbyen (Isfjorden) and Barentsburg, are the only ones now in operation. Coal is of Tertiary age, occurs in two to three ft. seams about 900 ft. above sea level, and is mined by drift methods, each miner averaging about three tons a day. Recreational facilities of Longyearbyen are noted.

Copy seen: DLC.

36452. NEWS OF NORWAY. Fishermen back controversial purse-seining experiment. (News of Norway, Oct. 7, 1954. v. 11, no. 35, p. 139)

The Federation of Norwegian Fishermen (*Norsk Fiskerlag*) pledged support to extensive purse-seining experiments in the northern Lofoten cod fisheries. The recent poor cod catch in the Lofotens is stated (by Gunnar Rollefson, Director of the Norwegian Ocean Research Institute) to be due not to purse-seining, but possibly to some change in the cod's annual spawning migration route.

Copy seen: DLC.

36453. NEWS OF NORWAY. North Norway cathedral. (News of Norway, May 27, 1954. v. 11, no. 21, p. 82)

Contains note on construction of new cathedral of the Norwegian State Church at Bodø (67°17' N. 14°25' E.), to be finished in 1956. A new community hall, clerical offices and living quarters for assistants will adjoin cathedral.

Copy seen: DLC.

36454. NEWS OF NORWAY. Off to the Arctic. (News of Norway, May 27, 1954. v. 11, no. 21, p. 82)

Contains note on projected Norsk Polarinstitutt expedition to Spitsbergen, June-Sept. 1954. Scientific group will consist of two geological parties, glaciologists, zoologists, geographers, and hydrographers. They will be transported by the motor cutter *Linna* which will then chart and take depth soundings in Jan Mayen waters. In July the vessel *Polarbjørn* will visit East Greenland to supply trappers and meteorological stations.

Copy seen: DLC.

36455. NEWS OF NORWAY. Polar flight a success. (News of Norway, Jan. 28, 1954. v. 11, no. 4, p. 14)

Contains note on 6,000 mile transpolar flight test made by Scandinavian Airlines *Gorm Viking*, Jan. 22-25, 1954. The DC-6B aircraft flew from Los Angeles

to Stockholm by way of Edmonton, Alta. - Churchill, Man. - Frobisher Bay, Baffin Island - and Greenland. Non-stop flight from Greenland took nine hours. Two other transpolar flights had been made by SAS, in Nov. 1952 and May 1953.

Copy seen: DLC.

36456. NEWS OF NORWAY. Rebuilding arctic church. (News of Norway, Oct. 14, 1954. v. 11, no. 36, p. 142)

Contains note on new church in the fishing hamlet of Gamvik on Nordkyn peninsula, northernmost Norway, replacing that burned by the Germans. The church on Maaasy, an island 60 miles to the west, also destroyed in the war, was rebuilt and dedicated July 1953.

Copy seen: DLC

36457. NEWS OF NORWAY. Reconstruction of Finnmark Province nearing completion. (News of Norway, Oct. 28, 1954. v. 11, no. 38, p. 151)

Contains brief survey of work accomplished since liberation of Kirkenes in 1944. Work of the Finnmark Rehabilitation Office in construction of new homes, farm buildings, offices and factories, the rebuilding of the A/S Sydvaranger iron ore company installation, improvement of medical and hospital facilities, schools, tourist trade, electrification, etc., are noted.

Copy seen: DLC.

36458. NEWS OF NORWAY. Reindeer herders meet. (News of Norway, Apr. 22, 1954. v. 11, no. 16, p. 62)

Contains note on four-day meeting of Norwegian reindeer-herding Lapps at Kautokeino in Finnmark. Problems of marketing reindeer meat were discussed and the first reindeer-sledge race in Norway was held.

Copy seen: DLC.

36459. NEWS OF NORWAY. Relief for Lofoten fishermen. (News of Norway, Apr. 8, 1954. v. 11, no. 14, p. 54)

Contains note on failure of Lofoten cod fisheries in spring 1954. At height of season some 20,000 men were on the fishing banks. The Norwegian Government has made Kr. 3,750,000 available to relieve the fishermen. The 1954 yield is stated (in *Neues* . . . Apr. 29, 1954. v. 11, no. 17, p. 68) to be 42,068 tons, lowest since 1929, and 7,000 less than 1953 catch.

Copy seen: DLC.

36460. NEWS OF NORWAY. SAS to inaugurate fast transpolar service. (News of Norway, Nov. 11, 1954. v. 11, no. 40, p. 157)

Simultaneous flights from Los Angeles and Copenhagen will inaugurate Scandinavian Airlines System's transpolar service on Nov. 15, 1954. Guests on the flights, time saved over New York route, and ceremonies at Los Angeles and Copenhagen are noted. Two flights will now be made in both directions each week on Mon. and Thurs. **Copy seen:** DLC.

36461. NEWS OF NORWAY. Soviet spies sentenced. (News of Norway, May 20, 1954. v. 11, no. 20, p. 78)

Contains note on conviction of five Norwegians of spying on military and civilian establishments along the Norwegian-Soviet boundary in Finnmark. Fines and imprisonment were imposed at a court in Kirkenes (69°43' N. 30°03' E.)

Copy seen: DLC.

36462. NEWS OF NORWAY. To Tokyo via North Pole. (News of Norway, Dec. 16, 1954. v. 11, no. 45, p. 178)

Contains note on two chartered flights to be made in May 1955 by the Scandinavian Airlines System from Bodø, northern Norway, across the geographic North Pole to Tokyo. Scheduled flights over this route will probably start in summer 1956. In May 1954 the SAS DC-6B *Leif Viking* made the westward trip in 30 hours and 17 minutes.

Copy seen: DLC.

36463. NEWS OF NORWAY. U. N. medal to commemorate Fridtjof Nansen. (News of Norway, Oct. 14, 1954. v. 11, no. 36, p. 141)

Contains note on establishment of the Nansen Medal to be awarded each year by the United Nations for outstanding service in the field of refugee work.

Copy seen: DLC.

36464. NEWS OF NORWAY. U. S. authorizes transpolar flights. (News of Norway, Nov. 4, 1954. v. 11, no. 39, p. 154)

On Nov. 1, 1954, Scandinavian Airlines System's new route between Los Angeles and Copenhagen via Winnipeg and Greenland was authorized by the U. S. Civil Aeronautics Board. Flights will start Nov. 15. Eastbound flights will take seven hours less than present route via New York. **Copy seen:** DLC.

36465. NEWS OF NORWAY. U. S. invites negotiations on trans-polar air route. (News of Norway, June 3, 1954. v. 11, no. 22, p. 85)

U. S. is willing to grant Scandinavian Airlines System a three-year concession to operate an experimental route from Scandinavia via Greenland to Los Angeles. Services will probably start in about three months. Europe-bound flights will stop at Edmonton, Alta., and Bluie West 8 (Søndre Strømfjord), Greenland. In late May 1954, the DC-6B *Leif Viking* completed an SAS transpolar test flight from Oslo to Bodø (northern Norway), Fairbanks (Alaska), and Shemya (Aleutian Islands).

Copy seen: DLC.

36466. NEWS OF NORWAY. View on Lofoten failure. (News of Norway, Apr. 22, 1954. v. 11, no. 16, p. 61-62)

Contains account of interview with Gunnar Rollesen, Director of the Norwegian Ocean Research Institute. Lofoten fisheries have failed several times since accurate records were started in 1860. There may be small catches for 25 years, then a similar period of abundance. Unusually good fishing prevailed prior to 1951-1952. Heavy reduction in mature cod stock subsequently may be due to lagging plankton (food of young cod) production in past years. Dragging activities in eastern Barents Sea and off Finnmark take toll of cod stock, but are probably not responsible for the failure of 1954.

Copy seen: DLC.

36467. NEWSWEEK. The coldest cold war. (Newsweek, Nov. 15, 1954. v. 44, p. 54-56, illus., map)

Summary of Russian, American and Canadian scientific and defense activities in and around the Arctic Basin. Stations on ice islands, air bases, polar and weather stations, etc., are touched upon in text and represented graphically on map.

Copy seen: DLC.

36468. NEY, C. H. Position hunters on Hudson Bay. (Canadian surveyor, July 1953. v. 11, no. 5, p. 2-12, text map, tables)

Contains historical summary of work done by Canadian hydrographic, geodetic, and topographic surveys in the James and Hudson Bay regions. Charting and triangulation by the Hydrographic Service since 1910 on the west coast of Hudson Bay, establishment of the northern boundary of Manitoba by the Geodetic Survey in 1929 and 1930, mapping of the Belcher Islands in 1914-1915 and 1931, work of Geodetic Survey engineers operating from the *Nascopie* in 1935,

36469. NIAZI, SUAD A., and F. J. LEWIS. Tolerance of adult rats to profound hypothermia and simultaneous cardiac standstill. (Surgery, July 1954. v. 36, no. 1, p. 25-32, 4 fig., table) 33 refs.

Contains a report on profound hypothermia of -4.0° to 8.5° C. with simultaneous cardiac standstill, produced in 47 adult rats. Twelve animals which had cardiac arrest for 35-40 minutes lived from one day up to the time of writing (several weeks); 23 rats which had cardiac standstill for one to three hours lived from one hour up to the time of writing; of rats which had three to sixteen hours of cardiac arrest, none lived more than five hours.

NICHOLS, DONALD RAYMOND, 1927-, see Kachadoorian, R., and others. A preliminary report of geologic factors affecting highway construction . . . Susitna and MacLaren Rivers, Alaska. 1954. No. 35512.

36470. NICHOLS, EDWIN C. Lifeline to the North. (Army information digest, Nov. 1954. v. 9, no. 11, p. 32-45, illus.)

Contains history of the Alaska Communication System (ACS), which provides communications for the military, Territorial and Federal agencies and the civilian population to, from, and within the Territory of Alaska. ACS began in 1900 with military telegraph and cable lines under the direction of General A. W. Greely. From a small "commercial-type" organization at the outbreak of World War II, it expanded into a major tactical communication service. Its work then, personnel training, and post-war services are described, including landline, submarine cable, high and low frequency radio and VHF and microwave radio, ACS facilities total approximately 35,300 circuit miles, 25,300 of which are provided by radio, 6,800 by open wire lines and 3,200 by submarine cables. Installations exist at 44 widely

separated points in Alaska. Telegraph service is provided by teletypewriter at all but four of the remote smaller points, and long distance telephone service at 26 of the 31 public service stations. Radiotelephone stations, supplement the ACS network in remote and isolated regions of Alaska. ACS, part of U. S. Signal Corps, has headquarters at Seattle where its facilities interconnect with commercial telephone and telegraph companies.

36473. NICHOLS, PETER A. C. Boat-building Eskimos. Photos by G. Rennie and J. H. Thorpe. (Beaver, Summer 1954. Outfit 285, p. 52-55, 9 illus.)

Native boat-building in earlier times, later use of imported boats, rise in their cost after World War II, are reviewed as background of a government-sponsored project in 1953 at Lake Harbour, Baffin Island ($62^{\circ}51'$ N. $69^{\circ}53'$ W.). Five Eskimos were taught how to construct a whaleboat by J. H. Thorpe, a Nova Scotia shipwright in Hudson's Bay Co. service. Construction process and the finished boats (five) are briefly described. The importance to the native economy of revival of local boat-building industry is stressed.

36474. NICHOLSON, NORMAN L. The boundaries of Canada, its provinces and territories. Ottawa, Queen's Printer, 1954. 142 p. 9 illus. on 5 plates, 24 text maps. (Canada. Dept. of Mines

and Technical Surveys. Geographical Branch. Memoir 2) 197 refs.

Development of major political boundaries is traced from the mid-15th century to Canadian Confederation in 1867. A discussion of national and international boundaries from 1867 to the early 20th century includes the northern limits of Canada, the Alaskan boundary, Arctic boundaries, territorial waters, and the Labrador boundary. The limits of Ontario and Quebec, boundary problems in the Northwest and creation of the province of Manitoba and the districts of Keewatin, Mackenzie, Franklin, and Ungava are described. New provinces, boundary demarcation, administration, and adjustments, and boundary evaluation and classification in the 20th century are discussed. Appendix gives approx. lengths of major Canadian boundaries.

Contains abstract of paper presented at the 35th Annual Meeting of the Union, May 3-5, 1954, Washington, D. C. The Taku Glacier, Southeast Alaska (53°30' N. 134°04' W.), was studied during the 1953 field season of the Juneau Ice Field Research Project of the American Geographical Society. The theory of equilibrium glaciers is noted. The lower few miles of the Taku are in near equilibrium. Two explanations for the behavior of the central region of the glacier are presented.

36485. NIPPGEN, JOSEPH. Les divinités des eaux chez les peuples finno-ougriens, 1. Les Ostiaques et les Vogoules; les Lapons. (Revue d'ethnographie et des traditions populaires, 1925. année 6, no. 22, p. 207-216; no. 23-24, p. 408-421) Text in French. **Title tr.:** The water deities among the Finno-Ugric peoples, 1. The Ostyaks and Voguls; the Lapps.

The essential role of fish in the economy of Ostyaks and Voguls of the Ob' basin and the effects of this upon their religion are discussed. Their religious beliefs and practices, deities (Ostyak *ás-iga*, the old man of the Ob') are sketched and popular superstitions connected with fish are briefly described. It is emphasized that water *per se* has a less important role in the religion of these fishing people than in that of agricultural and pastoral folk. Its importance is as the dwelling place of their mythological beings.

Lappish beliefs, cult of ancestors, role of the sacred stones (*seita*) are reviewed (p. 408-421) on the basis of work of Uno Holmberg (Harva), Qvigstad, Leem, and others. Practices of mountain, sea and fisher Lapps are mentioned briefly. Variations among Finnish, Swedish, Norwegian and Russian Lapps are noted and comparative references made to beliefs and practices of other, mainly Finno-Ugric, peoples. Among the Lapps generally, the cult of ancestors is predominant, there is evidently no direct worship of water, and among spirits whose abode is the water the most primitive are evidently of anthropomorphic origin.

36488. NOBLES, LAURENCE HEWIT, 1927-. Characteristics of high-polar type glaciers in northwestern Greenland. (Geological Society of America. Bulletin, Dec. 1954. v. 65, no. 12, pt. 2, p. 1291)

Describes border of main icecap in northwestern Greenland as a relatively thin highland icecap of high-polar type ice resting on a very rugged sub-ice topography. Border is characterized by (1) large, slow-moving, heavily crevassed outlet glaciers, (2) smaller valley glaciers, possibly rapidly deteriorating, and (3) very slowly-moving uncrevassed ramp areas. Discusses temperature conditions in upper portion of the ice. All runoff is on surface. Debris content of the ice is relatively small. Regional firn line is at elevation of about 3,000 ft. Ablation of 20-25 inches of water during melt season is common in marginal regions.

36491. NORDENGREN, SVEN GUNNAR, 1890-. Resources of minerals containing phosphorus and potassium in Sweden and their utilization in the fertilizer industry. (*In*: United Nations Scientific Conference on the Conservation and Utilization of Resources, *Lake Success*, N. Y., 1949. Proceedings, v. 2. *Mineral resources*, pub. 1951. p. 278-80) 8 refs.

Includes discussion of production of phosphatic fertilizers from the apatite-containing iron ores of the Kiruna region, northern Sweden (67°51' N. 20°13' E.). The quantity of such ores with a phosphorus content of 0.95 to 6.0 percent P is calculated at about 924 million metric tons, holding 15 million tons of phosphorus. During World War II, a concentrate plant was built at Hvitåfors, Malmberget (67°10' N. 20°40' E.), about 50 miles southeast of Kiruna, and by 1944-45, production was 160,000 tons of 30 percent P₂O₅ concentrate annually. Since 1946 the plant has been held in reserve for future need.

Drawn from Nordqvist's paper: Zamëtki o chislennosti i nynëshnem položenii Chukchei zhivushchikh po beregu Ledovitogo okeana (Notes on the number and present condition of the Chukchis living on the Arctic Ocean coast) pub. in Russkoe geograficheskoe obshchestvo, Izvestiia, 1880. v. 16, p. 96-106 (copy not seen). **Title tr.:** Some notes on the Chukchis.

Semi-settled Chukchis along the arctic coast between Mys Shelagskiy and Mys Vostochnyy (now Dezhnev) were observed during the wintering of the Vega expedition in 1878-89. Some two thousand in number, they dwelt in 432 tents (families), mostly between the settlements of Uëdle and Nettey. They lived by fishing and sealing; they traded with Americans and Alaskan Eskimos but had little to do with their kinsmen on Bering Strait. In summer, the nomadic reindeer Chukchis went to Kolyuchinskaya Guba for fishing.

36494. NORDQVIST, OSCAR FRITHIOF, 1858-1924. Zamëtki o chislennosti i nynëshnem položenii chukchei, zhivushchikh po beregu Ledovitogo moria. (Vsesoiuznoe geograficheskoe obshchestvo. Izvestiia, 1880, pub. 1881. t. 16, p. 95-105, tables) Text in Russian. German abstract by F. v. Stein, "Die Tschuktschen am Ufer des Eismeeress, ihre Zahl und gegenwärtige Lage" in *Petermanns geographische Mitteilungen*, 1881, Bd. 27, p. 41-45. **Title tr.:** Notes on number and present-day situation of the Chukchis, living on the shores of the Arctic Ocean.

Contains demographic and economic notes on the settled Chukchis or Namol-

los, as observed during the wintering (1878-89) of the Vega expedition in the region between Mys Shelagskiy (70°06' N. 170°25' E.) and Mys Vostochnyy (East Cape) now Dezhneva. The Chukchis living on the Bering Sea coast between Mys Chukotskiy (64° 16' N. 173°06' W.) and Mys Vostochnyy have an obvious mixture of Eskimo blood, though they speak a Chukchi dialect. Relations between these and the Chukchis on the arctic coast are slight. The latter's settlements from Mys Vostochnyy westward to Mys Shelagskiy are listed, with some attempt to tabulate numbers and previous living places. In all there are about 420 families, some 2,000 individuals. Their living conditions, sealing and fishing economy, commercial relations with American traders and Alaskan Eskimos are outlined.

36498. NORTHWEST TERRITORIES. POWER COMMISSION. Annual report . . . for the fiscal year ended March 31, 1950-[1954]. Ottawa, 1950-1954. 5 v.: 24 p., 25 p., 29 p., 27 p., 23 p. illus., fold. map in each vol.

Reports of the Northwest Territories Power Commission created in 1948 "for the purpose of constructing and operating electric power plants to supply power to mines and other users in the Northwest Territories as the need arose." In Mar. 1950, the Yukon Territory was included. Each vol. contains reports on the Snare River and Fort Smith power plants (Mackenzie District), the Mayo River hydro-electric development (Yukon Territory), and, through 1952, the Hay River power project (Mackenzie District). Plans for establishing a power plant at Hay River were abandoned in 1952. Miscellaneous projects, future plans, and finances are also discussed. The reports for 1952-1953 and 1953-1954 contain a more detailed description of the Mayo River hydro-electric development including equipment, construction costs of plant, etc. A copy of the auditor's report with statements of income and expenses, assets and liabilities, etc., is appended to each report. *Maps* show location of projects.

36503. NOVIKOV, G. A. Promyslovokhotnich'i zveri i ptitsy lesnoi zony. (*In*: Akademiia nauk SSSR. Zoologicheskii

institut. Zhivotnyi mir SSSR, t. 4, Lesnaya zona, 1953, p. 651-61) 36 refs. Text in Russian. **Title tr.:** Commercial and game animals and birds of the forest zone.

Contains data on restriction of hunting, on sanctuaries and animal preserves, including those in Kola Peninsula (Lapland) and Arkhangelsk province. The introduction of new commercial animals, as the ondatra, now widely distributed in the U.S.S.R., the re-introduction and acclimatization of certain native animals (river beaver, reindeer, squirrel, etc.) are discussed. Many of the valuable commercial and fur animals, as sable, ermine, beaver, weasel, fox, hare, squirrel, etc., are present in the taiga subzone. Some northern regions, as Kola Peninsula, Yakutia and especially Kamchatka Peninsula, have ample resources of commercial and game animals and birds.

36504. NOVIKOV, G. A. Rol' pozvochnykh zhivotnykh v zhizni lesa. (In: Akademiya nauk SSSR. Zoologicheskii institut. Zhivotnyi mir SSSR, t. 4, Lesnaya zona, 1953, p. 599-630, illus.) 106 refs. Text in Russian. **Title tr.:** The vertebrates' rôle in forest life.

The influence of vertebrates upon forest vegetation is considered: their damage to various parts of trees, as buds, seeds, leaves, twigs, bark, etc., is an important factor in the growth of trees and shrubs. Many mammals and birds use berries, herbs, lichens and mushrooms as food. Certain animals and birds by their activity in the forest floor and in the upper layers of soil affect the hydro-microclimate. Finally, the birds and some mammals influence the life of the forest by destroying many injurious insects and some small rodents. The animals and plants in the forests are closely interrelated, they are, in fact, complementary parts of a single forest complex. The study includes the taiga subzone.

Copy seen: DLC; MH-Z.

36505. NOVIKOV, G. A. Usloviya sushchestvovaniya zhivotnykh v lesu. (In: Akademiya nauk SSSR. Zoologicheskii institut. Zhivotnyi mir SSSR, t. 4, Lesnaya zona, 1953, p. 62-83) 66 refs. Text in Russian. **Title tr.:** Life conditions of animals in the forest.

Contains a biogeographical sketch of the forest zone of the U.S.S.R., with data on its geobotanical subzones, geomorphology, soil, climate and animals.

The influence of the microclimate upon the animal population is stressed. The animals' dependence on forest vegetation as their chief food source is discussed: green parts, seeds, flowers, buds, bark and wood of the trees, grass, berries, mosses, lichens, and mushrooms—all serve as food for various animals, birds and insects. The influence of man in changing the fauna and microclimate of the forest by cutting trees, erecting dams and draining swamps, is discussed.

36510. NOYES, JOHN R. Transportation in Alaska. (Military engineer, 1953. v. 45, no. 304, p. 99-103, illus. incl. map)

Contains description of the development of transportation in Alaska including a brief history of early settlement, effects of geographic features governing the penetration of the interior by gold miners, and early transportation routes. A narrow-gauge steam railway 130 miles long from Skagway to Whitehorse was built with British capital in 1898 to meet the needs of Klondike miners. Establishment of the Alaska Road Commission by the U. S. Army in 1905 led to the construction of an overland trail from Valdez to Fairbanks by 1910. The U. S. Government purchased the Alaska Northern Railroad (standard gauge) in 1912, and completed it to Fairbanks in 1923. Known as the Alaska Railroad, it has been operated ever since by the Government as a public utility. Road development and air transportation are broadly reviewed.

"Ice needles occur in stable winter conditions, usually in the intense cold of the polar winter; . . . they are formed between 0° C. and -11° C. . . . The

occurrence . . . indicates supersaturation at relatively high temperatures, and thus high icing hazard." Detailed analysis is given of a typical case in which fog disappeared during the precipitation of needles at Helsinki on Jan. 8, 1954. Formation of the needles is attributed to a rapid pressure decrease coupled with cloud radiation. The height of the needle formation is believed to be that of the apparently non-precipitation cloud or fog layers.

36513. NUTT, DAVID C., and others. Blue Dolphin Labrador Expedition, 1949. Field report. Hanover, N. H., [Dartmouth College], 1950. 13, 2, 3, 2, 2 p. Mimeographed. *Other authors:* H. P. McKean, R. H. Backus, W. A. Black, and E. Harp.

The research vessel *Blue Dolphin* is described. Plan of work of the first expedition in this ship involved a coordinated study of certain aspects of hydrography, oceanography, and biology in the Strait of Belle Isle and the coastal waters of Labrador. The 20-man group led by the writer included a scientific staff of six and six student assistants. A chronological account of the expedition June 18-Sept. 9 (Strait of Belle Isle, St. Lewis Inlet, Kaipokok Inlet, Hebron Fjord, Hamilton Inlet and return) is given, followed by brief comments on weather, ice, plan of work and changes made, and operation of the *Blue Dolphin*. The hydrographic (D. C. Nutt), oceanographic (D. C. Nutt and H. P. McKean), biological (R. H. Backus), geographical (W. A. Black), and archeological (E. Harp) field reports are given in annexes to the main report.

36514. NUTT, DAVID C., and others. Blue Dolphin Labrador Expedition, 1950. Field report. [Hanover, N. H., Dartmouth College], Sept. 1950. 11, 1, 4, 2, 2, 1 p. 3 text maps, diagr. Mimeographed. *Other authors:* R. A. Backus, C. O. Handley, and J. Schwedland.

Minor additions of equipment in the vessel *Blue Dolphin* are listed. The 1950 plan of work, continuing the 1949 investigations, was divided into two parts: (1) more detailed oceanographic and hydrographic study of the Hamilton Inlet-Lake Melville region; (2) reconnaissance of the area between Hebron Fjord and Cape Chidley. Associated biological investigations were undertaken in addition to the basic program. The 18-man group included a scientific staff (and student assistants) of 13. A chronological account of the expedition, June 21-Sept. 7, is given and comments are made on weather and plan of work. Field reports on hydrography (D. C. Nutt), oceanography and marine biology (R. H. Backus), zoology (C. O. Handley), and forestry (J. Schwedland) follow the main report.

36515. NUTT, DAVID C., and others. Blue Dolphin Labrador Expedition, 1951. Field report. [Hanover, N. H., Dartmouth College], Nov. 1951. 9, 1, 4, 2, 1, 2 p. 3 text maps. Mimeographed. *Other authors:* R. H. Backus, L. K. Coachman, R. Park, D. P. Snyder and J. Schwedland.

Field work in summer 1951 consisted primarily of: a more detailed examination of the oceanographic conditions and processes in the Hamilton Inlet-Lake Melville region; and reconnaissance of the Nain area. Marine biological work (especially fish), study and collection of birds and small mammals, and examination of some aspects of forest botany was continued for 1950. The 19-man group included a scientific staff (and student assistants) of 14. A chronological account of the expedition, June 21-Sept. 6, is given and comments are made on weather and plan of work. Field reports on hydrography (D. C. Nutt), oceanography (R. H. Backus, L. K. Coachman, R. Park), hydrobiology (R. H. Backus), zoology (D. P. Snyder), and forestry (J. Schwedland) follow the main report.

36516. NUTT, DAVID C., and others. Blue Dolphin Labrador Expedition 1952. Field report. [Hanover, N. H., Dartmouth College], Oct. 1952. 9, 1, 4, 2, 2, 3 p. 2 text maps. Mimeographed. *Other authors:* L. K. Coachman, R. Park, E. R. Miller, J. T. Tangerman, and W. Z. Lidicker.

Oceanographic and hydrographic work of 1949-1951 was continued, the primary

area of study being the Hamilton Inlet-Lake Melville estuary. The Nain and Hebron Fjord stations were also re-occupied, and detailed reconnaissance survey was carried out between Port Manvers and Saglek. Marine and freshwater biological collections (with emphasis on fish) were made at all points. The 19-man group included a scientific staff (and student assistants) of 16. A chronological account of the expedition, June 22-Sept. 6, is given with comments on weather and plan of operations. Field reports on hydrography (D. C. Nutt), oceanography (L. K. Coachman, R. Park, E. R. Miller, J. T. Tangerman), biology (W. D. Lidicker) follow the main report.

36517. NUTT, DAVID C., and P. F. SCHOLANDER. Blue Dolphin Labrador Expedition, 1954. Field report. [Hanover, N. H., Dartmouth College], Oct. 1954. 8 p. Mimeographed.

Primary objective of summer 1954 field operations was to carry out hydrobiological investigations in the Hebron Fjord area of northern Labrador, with particular emphasis on study of the physiology of marine animals in relation to low temperature environment. The 23-man group included a scientific staff of 14. A brief chronological account of the expedition, June 21-Aug. 29, is given. Twenty-seven studies carried out by members of the expedition in the fields of physiology, microbiology, miscellaneous biology, physical sciences, and geography are listed, and are to be reported in forthcoming papers.

Copy seen: CaMAI.

36518. NUTT, DAVID C. Blue Dolphin Labrador Expedition, winter project 1952. Field report. [Hanover, N. H., Dartmouth College], Apr. 1952. 9 p. Mimeographed.

Contains a brief chronological account of the project planned as a continuation of oceanographic survey operations in summers 1950 and 1951 in the Hamilton Inlet-Lake Melville region. Physical observations for temperature, salinity (surface and subsurface), and ice thickness were made through the ice at various points in the estuary during Mar.-Apr. 1952 by a three-man party led by the writer. Methods are described and comments are made on equipment and on adequacy of clothing used during the project.

36520. NUTT, DAVID C., and L. K. COACHMAN. Blue Dolphin Labrador Expedition, winter project 1953. Field report. [Hanover, N. H., Dartmouth College], Apr. 1953. 4 p. Mimeographed.

Oceanographic survey operations in the Hamilton Inlet - Lake Melville region were continued in Mar.-Apr. 1953 by a seven-man party led by D. C. Nutt. A brief chronological account of the expedition is given. Twelve oceanographic stations were occupied, river flow measurements of the Kenamu, Hamilton, Goose, and North West Rivers were made, and preliminary examination of ice structure in the area around North West River and Goose Bay was undertaken. Comments are made on weather, ice conditions, technique and equipment.

Copy seen: CaMAI.

36521. NUTT, DAVID C. Certain aspects of oceanography in the coastal waters of Labrador. (Canada. Fisheries Research Board. Journal, June 1953. v. 10, no. 4, p. 177-86, 2 text maps, 2 graphs, 2 tables) 10 refs.

"Oceanographic study of six inlets along the Labrador Coast shows that their water comes primarily from the cold Labrador current. Below 50 meters, temperatures are characteristically below zero, and salinities usually between 32 and 33‰. The principal exception is Lake Melville, which, although below zero, is very slightly warmer and freshened to 26-29‰. In summer there is some freshening and warming of the upper layers of all inlets and in the coastal waters, this being detectable down to about 40 meters, or exceptionally to 100 meters. None of the inlets contained stagnant bottom water, although all but one were much deeper inside than at the 'threshold.' Comparison of 1926 and 1949 observations in similar

adjacent inlets gives no indication of warming of the bottom waters over that period."—*Author's abstract.* Data were collected from Seven Islands Bay, Hebron Fjord, Nain area, Kaipokok Inlet, Hamilton Inlet - Lake Melville estuary, Strait of Belle Isle - St. Lewis Inlet region during the Blue Dolphin expeditions of 1949-1951.

36523. NYBERG, ALF. Meridional heat transport on a part of the Northern Hemisphere in November 1947, July 1949, and February 1950. (Archiv für Meteorologie, Geophysik und Bioklimatologie, 1954. Ser. A, v. 7, p. 99-113, tables, graphs) 13 refs. Text in English. Summary in English, German and French.

The mean horizontal fluxes of enthalpy ("sensible heat") and latent heat were computed three months for 40°-70° N. lat. up to levels of 1000 mb. They are lowest in July and three to four times greater in winter. Mean heating of an air column was computed. It has a winter maximum of about 1° C./24 hrs. at latitude 60°-70° N. Values for the polar region are considerably lower.

36524. NYE, J. F. The mechanics of glacier flow. (Journal of glaciology, Nov. 1952. v. 2, no. 12, p. 82-93, diagrs., graphs) 13 refs.

"The flow of valley glaciers is examined in the light of recent laboratory experiments on the behaviour of ice under load. Simple expressions are given for the velocity distributions in some cases of laminar flow, and the modification of a pure laminar flow theory necessary to explain the formation of transverse crevasses and thrust planes is considered. The paper ends with some remarks about the formation of crevasse patterns on the surfaces of glaciers. The statical equilibrium of a circular ice cap is discussed in an appendix."—*Author's abstract.* In a discussion of this paper

pub. in the same journal, Apr. 1954, v. 2, no. 15, p. 339-41, it is stated that crevasses in Greenland and Antarctica have been seen to exceed 120 ft. in depth. In Alaska, crevasses on Taku and Seward Glaciers have never exceeded 100 ft. The relation of the depth of the tensile layer and temperature is briefly discussed.

36529. OBERHOLSER, HARRY CHURCH, 1870- . Descriptions of two new subspecies of the downy woodpecker, *Dryobates pubescens* (Linnaeus). (U. S. National Museum. Proceedings, 1895, pub. June, 1896, v. 18, p. 547-50)

Contains descriptions and measurements based on a critical study of 200 specimens (from Alaska to Florida). One of the two new subspecies is *Dryobates pubescens nelsoni* n. ssp. the northern downy woodpecker, native to Alaska (type from Nulato) and northern British America.

Copy seen: DLC; MH-Z.

36530. OBERHOLSER, HARRY CHURCH, 1870- . An earlier name for *Melospiza lincolnii striata*. (Biological Society of Washington. Proceedings, Feb. 26, 1906, v. 19, p. 42)

Deals with synonymy of *Melospiza lincolnii striata*, a name long antedated. A new name, *M. l. gracilis* (Kittlitz), based on two adults taken June 25 at Sitka, Alaska, is proposed.

Copy seen: DSI; MH-Z.

36531. OBERHOLSER, HARRY CHURCH, 1870- . Eighth annual list of proposed changes in the A. O. U. Check-list of North American birds. (Auk, Oct. 1923, v. 40, no. 4, p. 677-82)

Proposed additions in the names of North American birds pertinent up to Dec. 31, 1922, are given, among them are *Pelidna alpina arctica* (East Greenland), *Canachites canadensis atratus* (Hawkins Island, Prince William Sound, Alaska) and *Hierofalco rusticolus alascanus* (Norton Bay, Alaska). A few changes of the names of Alaskan birds are also recorded.

Copy seen: DSI; MH-Z.

36532. OBERHOLSER, HARRY CHURCH, 1870- . The migration of North American birds. Second series 1. Five swallows. (Bird-lore, Nov.-Dec. 1917, v. 19, no. 6, p. 320-30, front.)

Contains tabulation of data on spring and fall migration of five North American swallows, with data on: locality, number of years' record, average and earliest dates of spring and fall arrival. The eastern cliff swallow *Petrochelidon lunifrons lunifrons*, the tree swallow *Iridoprocne bicolor*, the northern violet-green swallow *Tachycineta thalassina lepida* and the bank-swallow *Riparia riparia riparia*, all breeding in Alaska and northern Canada, are included.

Copy seen: DLC; MH-Z.

36533. OBERHOLSER, HARRY CHURCH, 1870- . A monograph of the genus *Chordeiles* Swainson, type of a new family of goatsuckers. Washington, D. C., U. S. Govt. Print. Office, 1914. vi, 123 p. 6 plates (U. S. National Museum. Bulletin 86) 19 refs.

Contains in the introductory part (p. 1-23) full descriptions of the genus *Chordeiles*, Chordeilidae, n. fam. and genera *Antrostomus* and *Selachalcis* n. gen.; a key to the species and subspecies of *Chordeiles* based on adults (p. 23-26). Descriptions are given of three species (*C. virginianus*, *C. acutipennis* and *C. rupestris*) and 17 subspecies (seven described as new), with synonyms, measurements, remarks, type locality, geographic distribution, habitat, list of specimens, a table of measurements of specimens, plumages, geographic variation, phylogeny and migration. *C. virginianus* and *C. v. virginianus*, occurring in Mackenzie District, Yukon Territory, northern Ontario and northern Manitoba, are included.

Copy seen: DSI; MH-Z.

36534. OBERHOLSER, HARRY CHURCH, 1870- . The names of the song sparrows. (Auk. Apr. 1899. v. 16, no. 2, p. 182-83)

Contains a change of name from *Melospiza fasciata* to *M. melodia*, involving changing in the name of 16 subspecies of song sparrows, some native to Alaska. *Copy seen:* DSI; MH-Z.

36535. OBERHOLSER, HARRY CHURCH, 1870- . A new *Agelaius* from Canada. (Auk, 1907. v. 24, no. 3, p. 332-36)

Contains a description, critical notes and data on distribution of *Agelaius phoeniceus arctolegus* n. subsp. occurring in Keewatin and Mackenzie Districts; a list of localities and a table of measurements of the forms of *Agelaius phoeniceus* are added. *Copy seen:* DSI; MH-Z.

36536. OBERHOLSER, HARRY CHURCH, 1870- . Notes on North American birds, I-II. (Auk, Apr. 1917, v. 34, no. 2, p. 191-97; (II) July 1917, no. 3, p. 321-29)

Contains notes on the status, relationships and nomenclature of North American birds. *Cephus snowi* reported from Kenai River, Alaska, on Oct. 7, 1906 (*Arctic Bibliography*, No. 12255). *Anas rubripes rubripes* (Labrador, Hudson Bay region), *A. r. tristis* (Labrador),

and *Planesticus migratorius caurinus* (Alaska and southeastern Alaska) are included. In pt. II: *Geothlypis trichas brachidactyla* (breeding in northern Ontario) and *Molothrus ater artemisiae* (Keewatin and Mackenzie District) are included. *Copy seen:* DSI; MH-Z.

36537. OBERHOLSER, HARRY CHURCH, 1870- . Notes on the wrens of the genus *Nannus* Billberg. (U. S. National Museum. Proceedings, Apr. 28, 1919. v. 55, no. 2265, p. 223-36)

Contains a discussion of the genus. Thirty-six forms are listed; detailed treatment is given to nine American subspecies of *N. troglodytes*, with subspecific characters, descriptions, measurements, type localities and data on distribution. Eight subspecies are native to the Aleutian, Pribilof and Semidi Islands, coastal regions of Alaska and Kodiak Island. Three subspecies are described as new.

Copy seen: DLC; MH-Z.

36538. OBERHOLSER, HARRY CHURCH, 1870- . A review of the larks of the genus *Otocoris*. (U. S. National Museum. Proceedings, June 9, 1902. v. 24, no. 1271, p. 801-883, plates 43-45, 4 maps)

Contains a critical revision of the genus *Otocoris* from various regions, with a table for the determination of the species, based on adult males in breeding plumage. Descriptions are given of 36 species and subspecies (ten subspecies described as new), with synonyms, measurements, plumages, distribution and records of specimens. *Otocoris alpestris alpestris* (Labrador, Northwest Territories), *O. a. flava* (northern Scandinavia and northern Russia), *O. a. hoyti* (Northwest Territories) and *O. a. articola* n. ssp. (Alaska and Northwest Territories), are included.

Copy seen: DSI; MH-Z.

36539. OBERHOLSER, HARRY CHURCH, 1870- . A revision of the American great horned owls. (U. S. National Museum. Proceedings, Jan. 22, 1904. v. 27, no. 1352, p. 177-92)

Contains an analytical key to the American forms of *Asio* based on adult females, and descriptions of 16 subspecies (six described as new), with synonyms, measurements, critical notes, data on distribution and list of specimens. *Asio magellanicus lagophonus*, n. ssp., native to Alaska, *A. m. saturatus* from

Sitka, and *A. m. algistus*, n. ssp. (type: St. Michael, Alaska; L. M. Turner) occurring in northwest coast region of Alaska, are included.

Copy seen: DSI; MH-Z.

36540. OBERHOLSER, HARRY CHURCH, 1870- . The subspecies of *Larus hyperboreus* Gunnerus. (Auk, Oct. 1918. v. 35, no. 4, p. 467-74)

Contains synonyms, descriptions, critical remarks, data on geographic distribution and lists of localities of two gulls: *Larus hyperboreus* (Alaska, arctic Canada, Greenland, Labrador, northern Siberia), and *L. h. barrovianus* (in all Alaska regions, Aleutians, Yukon Territory and Mackenzie District).

Copy seen: DSI; MH-Z.

36541. OBERHOLSER, HARRY CHURCH, 1870- . A synopsis of the genus commonly called *Anorthura*. (Auk, Apr. 1902. v. 19, no. 2, p. 175-81)

Contains a discussion of *Obiorchilus* n. gen. and an annotated list of 17 species and subspecies, with synonyms and data on distribution. Four species native to Alaska, Southeast Alaska and the Aleutians, and *O. pallescens* from Commander Islands, are included.

Copy seen: DSI; MH-Z.

36542. OBERHOLSER, HARRY CHURCH, 1870- . A synopsis of the races of *Bombicilla garrula* (Linnaeus). (Auk, July 1917. v. 34, no. 3, p. 330-33)

Contains synonyms, descriptions, critical notes and distributional data on: *Bombicilla garrula garrula* (northern Norway and northern Russia), *B. g. centralasiae* (breeding in northern Siberia), and *B. g. pallidiceps* (northern and central North America, breeding in Alaska, northern Alaska, Mackenzie District and southward to northwestern Manitoba). **Copy seen:** DSI; MH-Z.

36543. OBERHOLSER, HARRY CHURCH, 1870- . Three new North American birds. (Washington Academy of Science. Journal, Nov. 20, 1946. v. 36, no. 11, p. 388-89)

Includes descriptions of *Anthus spinolletta geophilus* n. ssp. from Unimak Island, Alaska, and *Passerella iliaca zaboria* n. ssp. (Alaska fox sparrow) collected in Circle, Alaska, and breeding in northern Manitoba, Mackenzie District, Alaska and the Hudson Bay region.

Copy seen: DSI; MH-Z.

36544. OBRUCHEV, SERGEI VLADIMIROVICH, 1891- . Chukotskaia letnaia ekspeditsiia. (Leningrad. Arkhticheskii . . . institut. Bülleten', 1932. v. 2, no. 11-12, p. 248-53, 295-97, map) Text in Russian. Summary in English. **Title tr.:** The Chukotka air expedition.

Preliminary report by the head of the expedition on the flights in Kamchatskaya Oblast' July-Oct. 1932; personnel, and flight conditions are given as well as the routes: from Krasnoyarsk to Khabarovsk and thence along the Okhotsk Sea coast to Kamchatka, Anadyr' and across Chukotka to Uelen; a flight to Wrangel Island to relieve the polar station, and the return under very unfavorable conditions to Nogayeva Bay. Air observations of the geomorphology of visited regions are briefly outlined. Text map (p. 251) shows routes of flights. cf. *Arctic Bibliography*, No. 12658.

Copy seen: DLC.

36545. OBRUCHEV, SERGEI VLADIMIROVICH, 1891- . Ekspeditsiia Geologicheskogo komiteta na r. Indigirku. (Priroda, 1927, no. 4, col. 306-307) Text in Russian. **Title tr.:** The Expedition of the Geological Committee to the Indigirka River.

Contains brief account by the leader, of the expedition in 1926 to investigate the eastern Verkhoyansk Ridge, the upper course of the Indigirka River, and Kekhtas Ridge. The geological structure of the area is presented and a description given of a new ridge discovered on the right bank of the Indigirka, between Nera and Moma Rivers.

Copy seen: DLC; MH.

36546. OBRUCHEV, SERGEI VLADIMIROVICH, 1891- . Kolymskaia geologicheskaiia ekspeditsiia Akademii nauk. (Leningrad. Arkhticheskii . . . institut. Bülleten', 1931. v. 1, no. 7, p. 120-21) Text in Russian. **Title tr.:** The Kolyma Geological Expedition of the Academy of Sciences.

Preliminary note on results of the Kolyma Expedition, 1929-1930, headed by the author; its main achievements, among them the investigations of Cherskogo Range, are briefly listed.

Copy seen: DLC.

36547. OBRUCHEV, SERGEĬ VLADIMIROVICH, 1891- . Novyi polūs kholoda. (Leningrad. Arkhticheskiĭ . . . institut. Būlleten', 1931. v. 1, no. 8, p. 157-58) Text in Russian. **Title tr.:** The new Cold Pole.

In 1926, the author expressed the opinion that the Cold Pole was not, as hitherto believed, at Verkhoyansk, but at Oymyakon. In 1929, a meteorological station was established at Oymyakon; observations in Dec. 1929, Jan., Feb. and July-Oct. 1930, established that its mean, lowest and highest monthly winter air temperatures are lower by several degrees than those of Verkhoyansk. The severe frost at Oymyakon is explained by its situation in a valley encircled by mountains which prevent air circulation.

36555. O'CONNOR, J. M., and B. F. MCCARTHY. The origin of sensations of heat and cold. (Brain, 1952. v. 75, p. 325-42)

Contains a study of the relation between the skin temperature and the applied difference in temperature required to produce a standard sensation of warmth or cold; "the applied differences in temperature necessary to produce a standard sensation of cold fall to about 26°, rise to about 30° and fall sharply to about 34°, from which point it rises continuously with rising initial temperature."

Copy seen: DSG.

36556. O'CONNOR, J. M. The physiological basis of the sensation of cold, 1. The influence of the initial skin temperature on the excitability of the cold end organs. (Royal Irish Academy. Proceedings, B. 1935. p. 327-44, illus., table) 13 refs.

Contains a discussion of methods of measuring excitability and description of an arrangement "by which the influence of the initial skin temperature on its excitability to cold stimuli is examined between 22° C. and 41° C." in man. The excitability was found rising with increasing temperature to three maxima of about 29°, 35° and above 39° C., and falling sharply as soon as each maximum is reached. The significance of the phenomenon is discussed, and its relation to the Arrhenius equation calculated. Paradoxical cold sensation is also examined.

Copy seen: DSG.

36557. O'CONNOR, J. M., and others. The physiological basis of the sensation of cold, 2. The analogy between human cold sensations and shivering in the rabbit. (Royal Irish Academy. Proceedings, B. 1935. p. 345-50, illus.) 5 refs. *Other authors:* M. Moriarty and O. Fitzgerald.

Contains a comparative study of skin temperature and shivering in rabbit and in man. "The variations in the amount

of shivering correspond to alterations in excitability to a constant stimulus. The nature of that stimulus is considered, and an explanation of its absence at higher temperatures advanced."

Copy seen: DSG.

36558. O'CONNOR, J. M. The physiological basis of the sensation of cold, 3. The influence of the body temperature on the resting oxygen consumption—a metabolic analogy to cold sensations. (Royal Irish Academy. Proceedings, B. 1935. p. 351-57, illus.) 11 refs.

Contains a comparative study of oxygen consumption in the quiescent anesthetized rabbit at varying temperatures with the phases of excitability of rabbit and human skin. The physiological bases of these and similar phenomena are analyzed and discussed.

36560. ØDEGÅRD, ØRNULV, 1901- The distribution of mental diseases in Norway; a contribution to the ecology of mental disorder. (Acta psychiatrica et neurologica, 1945. v. 20, p. 247-84, illus. tables) 8 refs.

Contains a statistical study and analysis of underlying factors based on "all first admissions to Norwegian psychiatric hospitals during the period 1926-35, altogether about 14,000 cases." The low admission rate in the northern districts (Sørtrøndelag, Nordtrøndelag, Nordland, Troms, Finnmark), like that in the eastern districts, is attributable to selective migration; on the other hand, a mixture of racial elements (Finns and Lapps) in Finnmark "seems with certainty to have led" to relatively higher incidence of mental diseases.

36564. OESAU, WANDA. Schleswig-Holsteins Grönlandfahrt auf Walfischfang und Robbenschlag vom 17.-19. Jahrhundert. Glückstadt, J. J. Augustin, 1937. 316 p., illus., 41 plates, map, about 100 refs. Text in German. **Title tr.:**

The Greenland voyages of Schleswig-Holstein for whaling and sealing in the 17th to 19th centuries.

A study, based on archival and printed sources, of commercial voyages of the North German maritime cities through the centuries. Their arctic hunting grounds were between Spitsbergen and Jan Mayen, 70°-80° N. lat., and only in the 18th century actually near Greenland in Davis Strait, though the term "Grönlandfahrt" was used from the beginning for all arctic trade voyages. The animals hunted: whales, seals, walrus and polar bear are described, preliminary to analysis of the whaling and sealing enterprises. Statistical data and names of vessels, directors of companies, navigators, catch and profit, the origin of ships' crews, etc., are given. The influence of these voyages upon trade and industry, the development of navigation, spiritual values, etc., are investigated.

Contains a discussion of the ecological groups of this fauna in Sweden, their origin and a systematic list of 52 species; data are given on habitat, distribution in Sweden and other countries, ecological characteristics and origin. At least 12 of these species occur in Swedish Lapland.

Copy seen: MH-Z.

36566. OGAWA, TADATO. Kōbo no catalase ni oyobosu teion no eikyō. Dai 1-hō. Sei kōbo kintai catalase ni oyobosu teion no eikyō. (Teion kagaku [Low temperature science], Tokyo, 1953. v. 10, p. 175-85, 3 fig., 19 tables) 8 refs. Text in Japanese. Summary in English. **Title tr.:** Effects of low temperature on yeast catalase, 1; effects of low temperature on catalase in living yeast cells.

Catalase activity in yeast cell suspensions was raised by freezing and thawing. The kind of suspension media, conditions of culture and rates of cooling and freezing had also effects on this activity.

Copy seen: DLC.

36567. OGAWA, TADATO. Kōbo no catalase ni oyobosu teion no eikyō. Dai 2-hō. Kōbo no catalase no bunri seisel ni tsuite. (Teion kagaku [Low temperature science], Tokyo, 1953. v. 10, p.

187-89, fig., 2 tables) 11 refs. Text in Japanese. Summary in English. **Title tr.:** Effects of low temperature on yeast catalase, 2; purification of catalase.

Contains description of a method for separation and purification of catalase from yeast cells. **Copy seen:** DLC.

36568. OGAWA, TADATO. Kōbo no catalase ni oyobosu teion no eikyō. Dai 3-pō. Seisei kōbo catalase ni oyobosu teion no eikyō. (Teion kagaku [Low temperature science], Tokyo, 1953. v. 10, p. 191-95, fig., 3 tables) 3 refs. Text in Japanese. Summary in English. **Title tr.:** Effects of low temperature on yeast catalase, 3; effects of low temperature on purified yeast catalase.

Crystalline yeast-cell catalase in solution showed decreased activity after freezing and thawing. As shown in pt. 1 of this series, catalase activity in cell suspensions increases by similar treatment. **Copy seen:** DLC.

36569. OGAWA, TADATO. Kōbo no catalase ni oyobosu teion no eikyō. Dai 4-hō. Seikōbo narabi ni seisei catalase no tōketsu kansō. (Teion kagaku [Low temperature science], Tokyo, 1953. v. 10, p. 197-99, table) 8 refs. Text in Japanese. Summary in English. **Title tr.:** Effects of low temperature on yeast catalase, 4; freeze-drying of living yeast cells and purified catalase.

Intracellular and purified catalase are affected by freeze-drying in a similar way as by freezing and thawing: its activity in a yeast cell suspension is increased, while in purified solution it is reduced. **Copy seen:** DLC.

36570. OGAWA, TADATO. Tōketsu yūkai ni yoru ushi kanzō catalase yōeki no kasseido no henka ni tsuite. (Teion kagaku [Low temperature science], Tokyo 1953. v. 10, p. 201-204, fig., 3 tables) 3 refs. Text in Japanese. Summary in English. **Title tr.:** Effects of freezing on the activity of catalase solution prepared from cow liver.

The reported tests showed that crude catalase solution prepared from cow liver lost up to 60 percent of its activity depending on the conditions of freezing and thawing. **Copy seen:** DLC.

36571. OGIEVSKIĬ, V. V. Perspektivy razvitiia lesokul'turnogo dela na severozapadē taehnoi zony. (Lesnoe khoziatstvo, Feb. 1954. v. 7, no. 2, p. 13-16)

Text in Russian. **Title tr.:** Outlook for the development of silviculture in the northwestern taiga zone.

Due to nearly 25 years' concentrated cutting, the natural process of forest recovery in the taiga has failed: about 50 percent of the reforestation area is covered by trees of minor value, and 0.8 million hectares in Karelo-Finnish SSR, as well as 5.5 million ha. in Arkhangel'sk and Vologda Provinces and Komi A.S.S.R. stand bare. Only artificial afforestation can remedy this situation. Aerial seeding, methods of ground cultivation, implements and machinery are discussed and evaluated.

36572. OGLOBLIN, N. N. "Znamena" sibirskikh inorodtsev XVII veka. (Ural'skoe obshchestvo lūbiteleĭ estestvoznaniia v Ekaterinburgi. Zapiski, 1891-1892. t. 13, vyp. 1, p. 1-8, fold. plate) Text in Russian and French. **Title tr.:** "Signs" of the Siberian natives in the 17th century.

Contains analyses of 105 signs or marks representing signatures on documents dated 1646-1688, preserved in the archives of the Ministry of Justice in Moscow. They are mostly (71) from Ostyaks of the districts of Berezovo, Surgut, Kets and Yenisey, also the Yakuts of the Yakutsk District, the Tungus of the Okhotsk District, and the Tatars of the Districts of Turinsk and Krasnoyarsk. Upon petitions, tax documents, etc., they serve as signatures of illiterate individuals, and sometimes represent an entire clan, village or community. The pen-drawn signs depict domestic and wild animals, fish, reptiles, birds, men, fir trees, face (nose) of satan, swastika, weapons, utensils, etc. All (105) are illustrated, the meaning explained, the user and locality identified.

36579. OIL IN CANADA. Permafrost . . . a road hazard in subarctic exploration. (Oil in Canada, July 26, 1954. v. 6, no. 39, p. 57-58, 60, illus., diagrs.)

"Road construction methods in permafrost areas are discussed based on research at Norman Wells (N. W. T.) from 1943-1948. Destructive frost heaving is almost invariably associated with the formation of segregated ice. The total frost heaving is very closely equivalent to the sum of the thickness of all segregated ice layers in the frozen soil and is in direct proportion to the increased total water content of the frozen soil. Frost heaving will not occur without capillary saturation of the soil before or during the freezing process, a free water supply from within or outside the soil, the size of at least 3-10 percent of the

grains smaller than 0.02 mm., and a gradual temperature decrease of the air above the soil to below 32° F. Frost heaving is practically eliminated by the admixture of 4 percent or more by weight of lignosol. A frost line that rises well into the road grade provides a good foundation and better drainage for the road surface. Culverts through a road in permafrost may be opened quickly with portable steam generators."—SIP-RE. **Copy seen:** DGS; DLC.

tr.: Archeological data on the ancient history of the Lake Baykal region.

Contains description of neolithic burial places and settlements, discovered in the western Baykal region: at Kitoysk in 1870, and in the Angara valley from the Baykal to Bratsk (about 1,800 km.), investigated and mapped in 1932-1937. Sixty-nine new Neolithic burial places have been discovered since 1932. Different groups of burials and related material found in settlements have been conditionally designated as: Isaician, Serovian, Kitovian, Glasevian, and Tiverian. Each group or stage is described in turn: objects found, their material, form and purpose, and a dating is suggested. The neolithic materials of the Angara region have much in common with those of nearby Siberian regions. The Angara neolithic is very ancient and entirely original, different from the Amur neolithic and the "forest neolithic" of European Russia. The clothing, footgear, ornaments and art style of these people (about 1,000 B. C.) show surprisingly many affinities with clothing, etc. of recent Tungus. The popular theory on Tungus migration, therefore, needs to be revised.

Contains detailed description of archeological excavations made on the northeastern Taymyr coast by a party headed by the writer and sponsored by Arctic Institute U.S.S.R. A camping place on the island and remains of a wooden hut on the mainland were investigated; numerous artifacts of copper, bronze, iron and wood were found, mostly of Russian manufacture (e. g. coins) of the 16th-17th century. A party of Russian seafarers and hunters lived and perished there, evidently around 1620-1630; they originated probably from Mangazeya, were well equipped and wealthy as the hundreds of coins testify.

skomu gosudarstvu. Pod redaktsiĭ S. V. Bakhrushina. Ākutsk, Ākutgosizdat, 1949. 436, [4] p. 48 plates (incl. 1 fold. map), fold. map. (Akademiā nauk SSSR. Institut ūzyka, literatury, istorii i iskusstva Ākutskoi nauchno-issledovatel'skoi bazy i Institut istorii) Text in Russian. **Title tr.:** History of Yakutia, v. I. The past of Yakutia, until its incorporation into the Russian state. Edited by S. V. Bakhrushin.

An historical work for general readers, the first four chapters based on archeological investigations mostly in recent times by the author himself: (1) Beginning of human habitation in Yakutia (period of the paleolithic in the Lena basin); (2) Matriarchal clans in the territory of Yakutia in their period of highest development (neolithic of the Lena region); (3) Tribes on the Lena in the period of patriarchal clans (bronze period); and (4) Spreading of iron on the middle Lena. Paleolithic art of Siberia shows many affinities with the art of prehistoric Europe (viz. end of the Solutrian and the beginning of Magdalenian); it is concluded, therefore, that the first inhabitants of Siberia came from the West; they passed the Ural Mts. and reached the Baykal region, bringing their Mousterian culture and racial European type. Animal breeding in Yakutia existed three to four thousand years ago. Neolithic tribes of Yakutia had some relations with the peoples of North America 1300-300 B. C.

The next three chapters, based on ethnography, language and folklore, deal with the (5) origin, and (6) the early history of the Yakut people; (7) the Yakuts on the middle Lena before the coming of the Russians. An attempt is made to reconstruct the historical events and social organization from Yakut heroic poetry. The influence of Tungus and Paleo-Siberians (especially Yukaghirs) upon the formation of Yakut material culture, conception of the world, folklore and language are investigated. Subsequent volumes of this work are mentioned in a report 1954 by Z. V. Gogolev, q. v.

Critical review by V. N. Chernetsov in *Sovetskaiā ētnografiā*, 1950, no. 3, p. 214-19. **Copy seen:** DLC; NIC.

36585. OKLADNIKOV, ALEKSEĬ PAVLOVICH. K arheologicheskim issledovaniĭam v 1935 g. na Amure. (Sovetskaiā arheologiā, 1936. t. 1, p. 275-77) Text in Russian. **Title tr.:**

On the archeological explorations of the Amur region in 1935.

Contains a discussion of the Amur neolithic, with sharp criticism of the views of O. Menghin on the western Siberian cultures and the so-called "Matten-Keramik" (mat-ceramics), as presented in his *Weltgeschichte der Steinzeit*, 1931. The field work of the Soviet Amur expedition of 1935 is described; the entire region below Khabarovsk to Nikolaevsk was surveyed and an archeological map made; 135 neolithic sites and two settlements were found, and a large collection assembled: ceramics, stone tools, faunal remains, petroglyphs, etc. Three stages of the Amur neolithic are noted: the most ancient left large semi-subterranean hut-dwellings with large stone implements and a great quantity of ceramics (flat-bottom vessels with zig-zag ornaments); for the second stage, tools of schist are typical; the third stage left immense layers of shells and fish bones, many bone implements and a few stone tools. In the region near the Ussuri River, the neolithic culture later changed to the early iron. Mounds were found in the region of the Ul'chi and on the lower Amur, resembling those of the Kamchadals of the 17th-18th centuries. In the earth-huts on the lower Amur, spearheads of flinty schist of the Chukchi-Koryak type were found and seem to belong to the 17-18th centuries. **Copy seen:** DLC.

36586. OKLADNIKOV, ALEKSEĬ PAVLOVICH. K izucheniiu nachal'nykh ētapov formirovaniĭ narodov Sibiri; naselenie Pribalkal'ia v neolite i rannem bronzovom veke. (Sovetskaiā ētnografiā, 1950, no. 2, p. 36-52, 4 illus.) about 20 refs. Text in Russian. **Title tr.:** Contribution on the early stages of formation of the Siberian peoples; population of the Pri-Baykal in the neolithic and early bronze age.

Includes a discussion on the original home and migration of the Tungus, based on archeology, anthropology, and ethnography. It is concluded that a population with a culture similar to that of recent Tungus has lived in the Baykal region for about three to four thousand years, therefore the Tungus people are autochthonous in that region. The theory supported by S. M. Shirokogorov, W. Koppers, and others on the southern origin of the Tungus (in the northern China) is criticized and rejected. **Copy seen:** DLC.

36587. OKLADNIKOV, ALEKSEI PAVLOVICH. Osvoenie paleoliticheskimi chelovekom Sibiri. (Akademika nauk SSSR. Komissiya po izucheniiu chetvertichnogo perioda. Materialy po chetvertichnomu periodu SSSR, 1950. vyp. 2, p. 150-58) 6 refs. Text in Russian. **Title tr.:** The conquest of Siberia by paleolithic man.

Contains review of discoveries of paleolithic sites in Siberia since 1871, one third of all such in the U. S. S. R. to date, and most of them in the Northeast (Yakutia). Mal'ta on the Belaya River discovered in 1929, and Buret' on the Angara (1936) are the most notable. The artifacts made of bone, forms of dwellings, and art found in these sites are typical for the culture of the arctic hunters, and similar objects can be found among the Chukchis and Asiatic Eskimos.

Copy seen: DLC.

36588. OKLADNIKOV, ALEKSEI PAVLOVICH. Sledy paleolita v doline r. Leny. (Akademika nauk SSSR. Institut istorii material'noi kul'tury. Materialy i issledovaniia po arkheologii SSSR, 1953. no. 39, *Paleolit i neolit SSSR*, p. 227-65, 16 illus., 2 text maps) 30 refs. Text in Russian. **Title tr.:** Traces of the paleolithic in the Lena River valley.

Contains description of 29 paleolithic sites discovered and explored mostly by the writer in the period from 1924 to 1951 on the upper Lena. The southernmost of these sites lay west of Lake Baykal at Kachug and Verkholsensk, and the northernmost near Olekminsk (map p. 233). The process of excavation, and the stone hearths and artifacts found in the sites are described and illustrated. Earlier work is reviewed in the introduction (p. 227-32). The conclusion is offered that all Yakutia up to the New Siberian Islands was already inhabited by man in paleolithic time. Map (p. 265) shows Yakutia's paleolithic sites, its maximum glaciation and known sites of Quaternary faunal remains.

36591. OKUN', S. B. Kolonial'naiia politika tsarizma na Kamchatke i Chukotke v XVIII veke; sbornik arkhivnykh materialov pod redaktsiei I. A. P. Al'kora i A. K. Drezena, vstupitel'naiia stat'ia S. V. Okun'a. Leningrad, Institut narodov severa, 1935. 211 p. (*Its*: Trudy po istorii, t. 2) Text in Russian. **Title tr.:** The colonial policy of tsarism in Kamchatka and the Chukotsk Peninsula in the XVIIIth century; a collection of archival materials; compiled with an introduction by S. V. Okun', under the editorship of I. A. P. Al'kor and A. K. Drezen.

Contains an historical essay (p. 3-22) and selected texts of 75 supporting documents on the Russians in Kamchatka (p. 23-151) and Chukotka (p. 153-92) at the end of the 17th and beginning of the 18th century. The seizure of Kamchatka by Atlasov in 1697 and the numerous revolts of natives against Russian oppression are described, and available documents (mostly reports of officials and officers) presented. They deal with the revolts of Kamchadals in 1707-1711, 1731-1732, and 1741; revolts of Koryaks in 1745-1749 and 1751-1754; suppression of the revolts and punishment of their leaders. Missionaries' activity and the intensive Russification of Kamchatka are also described. Numbers of Kamchatka's

native population, based on tax lists and baptismal records, are given (p. 149-51).

Russian policy and war against the Chukchis in the 18th century is presented: Russian raids against Chukchis from 1701 to 1752, the Senate resolution of 1742 on the final extermination of the "unruly Chukchis," and the results of their "pacification." Information on the Chukchis and inhabitants on the islands of the Bering Strait in documents of 1756 and 1763 are given (p. 180-88). The documents, which include, among others, many from the Bering expeditions and some of Billings, were taken from the Leningrad branch of the Central Historical Archives. **Copy seen:** DLC.

Contains abstract of paper presented at the 35th Annual Meeting of the Union, May 3-5, 1954, Washington, D. C. "Gravity and magnetic readings have been made at about five-mile intervals along the Canadian section of the Alaska Highway [summer 1953]. The gravity observations were extended with a station spacing of about 20 miles to Fairbanks, Alaska. Profiles of the Bouguer gravity anomalies, and the vertical magnetic intensity have been plotted, and their major features interpreted. A negative Bouguer anomaly of 70 mgal. is observed over the northern end of the Rocky Mountains. An undulation at the base of the crust, with a maximum amplitude of 16,000 ft. is sufficient to explain this anomaly . . . The interpretation is to be included as part of a Ph.D. thesis at Toronto."

36597. OLIVER, JACK, and others. Elastic waves in arctic pack ice. (American Geophysical Union. Transactions, Apr. 1954. v. 35, no. 2, p. 282-92, graphs, 3 tables) 11 refs. *Also pub.* as: Columbia University. Lamont Geological Observatory. Contribution, no. 105. *Other authors:* A. P. Cray and R. D. Cotell.

Elastic wave propagation was studied in spring 1950 and 1951 on the arctic pack ice and shore-fast ice of the Beaufort Sea near Barter Island (between approx. $71^{\circ}30'-75^{\circ}53'$ N. $138^{\circ}40'-150^{\circ}55'$ W.), and in summer 1952 near ice island T-3 in the Arctic Ocean (approx. 88° N. 110° W. at that time). Landings were made by helicopter and U. S. Air Force ski-equipped C-47 transport plane. "Ice thicknesses varied from 0.9 to 2.1 meters and water depths from one and one-half to 3,800 meters. Values of the elastic constants were derived from the measured velocities of the longitudinal and shear waves and the density. Dispersive flexural waves and air-coupled flexural waves were examined in detail and were used to deduce ice thicknesses. A high-frequency arrival with a velocity of 1,700 meters/second was detected, the theoretical justification of which is not yet determined."—*Author's abstract.*

36598. OL'KHON, ANATOLIĬ. Pesni Dal'nego Severa; sbornik perevodov, s predisloviiem G. F. Kungurova. Irkutsk, Ogiz, 1946. 76 p. Text in Russian. **Title tr.:** Songs of the far North; a collection of translations, with an introduction by G. F. Kungurov.

A booklet of Tungus, Samoyed, Lamut, Yakut and Buryat songs in Russian

translation, presented in three groups: (1) new songs of the peoples of taiga and tundra, (2) Yakut lyrics and songs referring to the life of this people, and (3) the Great Patriotic War in the songs of the East Siberian peoples. Most of the songs are politically slanted verses of recent origin, praising soviet rulers and expressing sentiments of "soviet patriotism;" only a few specimens may be considered traditional or genuine folk songs, but none was taken down directly from the people. The influence of Russian folklore upon the popular literature of the northern peoples is extolled in the introduction.

36601. ONCHUKOV, NIKOLAĬ EVGEN'EVICH. Siĕvernnyĭ skazki; sbornik. St.-Peterburg, 1909. xii, 646 p. (Vsesoĭuznoe geograficheskoe obshchestvo, Zapiski po otdĕleniiu ĕtnografii, t. 33) Text in Russian. **Title tr.:** Northern fairy tales; a collection.

Contains texts of 303 Russian folk tales, nearly half of them (146) noted down by Onchukov in 1903-1904 and 1907, under auspices of Russian Geographical Society, the rest taken from

archives of the Society and those of the Russian Academy of Sciences. Many of the texts were recorded in northern parts of Arkhangel'sk Government on the lower Pechora, especially at Ust'-Tsil'ma, in Pomor'ye (District of Kem), on Letniy Bereg along the White Sea, some on the Kola Peninsula, and the others in Olonetsk and Perm Governments. In the introduction, the writer offers a general characterization of northern tales, stressing the influence of nature and living conditions upon the folk poetry. The world as presented in the tales is analyzed: landscape, family life, spirits and supernatural powers. The dissemination of these tales and their relationship to epics, *byliny*, are discussed. A glossary of local dialect terms is appended (p. 594-608) as well as an extensive index to the tales.

36603. O'NEILL, PATRICK H., 1915-. Arctic gold dredging. (Mining engineering, Nov. 1954. v. 6, no. 11, p. 1068-71, 12 illus.)

Operations in interior Alaska are described: hydraulic removal of the fine-graded overburden (muck), usually mid-May to early Nov.; bank stabilization by freezing pillars in waters, and the removal of pond ice and steam thawing of surface frost in spring. Unit dredging costs are double to triple those of year-round dredging in warmer regions.

36604. OPAT'SKII, L. Osvoenie bogatstv Arktiki; Nordvikiiskii sol'anoi

rudnik. (Sovetskoe kraevedenie, Sept. 1936, no. 9, p. 20-28, illus., tables) Text in Russian. **Title tr.:** Utilization of resources of the Arctic; the Nordvik salt mine.

The main sources of salt in the U.S.S.R. are located in its southern European part (the Ukraine and Stalingrad Province); supply of the northern and eastern areas involves costly transportation. In view of the ever-growing demand by industry and the fisheries, an expedition headed by Deviatkin was sent in 1935-36 to explore the deposits discovered in 1905 by I. P. Tolmachev on Yuryung-Tumus (Khara-Tumus) Peninsula near Nordvik. Following its favorable report, the annual production of 150,000 tons of salt is planned, beginning with 1936. Geomorphic features of salt deposits in Solyanaya Sopka (Gora Tustakh, 74° N. 111°25' E.) are described, and data from analysis of samples given. Organizational problems such as housing and food supply for approx. a thousand workers are discussed; as are difficulties of transporting salt to points in Yakut A.S.S.R., Chukotka and Kamchatka (100,000 tons annually), and to Murmansk and the northern areas of Krasnoyarsk Province (50,000 tons). Prospects of utilizing of other local resources (coal, oil, fish of the Khatanga River) are mentioned.

36607. ORLOV, F. B. Introduktsiia drevesnoi rastitel'nosti na Severe. (Lesnoe khozjalstvo, 1953, no. 12 (64), p. 39-42) Text in Russian. *Title tr.*: Introduction of woody vegetation in the North.

Contains an annotated list of 20 trees and shrubs cultivated for some years in the arboretum of the Arkhangel'sk Forest Technical Institute. Data are given on their hardiness, phenology, etc. with comment on their cultivation under conditions prevailing in Arkhangel'sk province.

Copy seen: MH.

36608. ORLOV, F. B. Shire primeniat' aerosev na Severe. (Lesnoe khozjalstvo, Mar. 1954. v. 7, no. 3, p. 30-34, tables) Text in Russian. *Title tr.*: Extend the practice of aerial seeding in the North.

Summing up the results of aerial (and, in part, conventional) seeding in various sections of northern U. S. S. R. in 1939-53, the author analyzes the influence of the character of the former forest, the ecological conditions of ground flora, and the season of sowing. Best results, he concludes, may be expected from aerial sowing of pine and larch (not spruce) on areas recently burned or cut, but before weeds take over, early in spring (April-May) when the soil is still covered with remnants of snow; the seeds must be slightly germinated before sowing.

36609. ORLOVA, ELENA NIKOLAEVNA. Naselenie po r. r. Ket'i i Tymi, ego sostav, khozjalstvo i byt. Krasnoyarsk, 1928. iii, 55 p. 9 illus. on plates, fold. map. (Nauchno-promyslovaya ekspeditsiya po izucheniiu reki Obi i ee basseina, 1927. Raboty, t. 1, vyp. 4). Text in Russian. *Title tr.*: The population on the rivers Ket' and Tym, its composition, economy and mode of life.

The native and Russian population on three right tributaries of the Ob' was studied during the Ob' Basin Scientific-Economic Expedition of 1927. Five villages of Ostyak Samoyeds were found on the upper Ket' (approx. 58°39' N. 86°45' E.); their racial type, dwellings, household utensils, use of birch bark, clothing and ornaments, occupation and economy are described (p. 11-27). The population on the middle Ket' consists mostly of cross-breeds between Russians and Ostyak Samoyeds, the Russian influence having increased considerably since 1911. On the lower Ket' live Russians. On the Tym River (approx. 59°41' N. 80°30' E.), Ostyaks live in 25 villages (about 60 families) and there are only 15 Russian families. The economy is based on hunting (chiefly squirrels) and fishing. On the Narym River (approx. 58°56' N. 81°33' E.), among the Ostyak Samoyeds and Russians, live some Tungus who came from the Sym River region; they are good hunters and keep a few reindeer. *Map* shows Tungus' nomadizing areas in the Narym region; their economy and culture is briefly sketched (p. 48-55).

Presents results of the field study in 1916 by the author of the lode deposits of an area near the Nenana coalfield in the northern foothills of the Alaska Range, just east of the Nenana River, principally around the headwaters of Totatlanika Creek, about 70 miles southwest of Fairbanks and 50 miles south of Nenana.

Gives brief statement of the mineral discoveries of this district. Describes local topography, geology, mineralogy, type of orebody, genesis of the mineral deposits, and the prospects. Principal minerals are gold, arsenopyrite, native bismuth, bismuthinite, and stibnite, with very minor amounts of pyrite and chalcopyrite. Gold has been the principal mineral sought. Brief summaries are also given of the occurrence of the metaliferous deposits in the geologically similar adjacent Fairbanks and Bon-nifield regions, based on earlier U. S. Geological Survey reports.

36635. OVSIANNIKOV, VLADIMIR FEDOROVICH, 1876- . Poezdka v dolinu reki Anadyr' letom 1929 goda. (Vsesoyuznoe geograficheskoe obshchestvo Vladivostokskii otdel. Zapiski, 1930. t. 5 (22), vyp. 1, p. 41-119, 21 illus., tables, sketch-map) Text in Russian. *Title tr.*: A journey to the Anadyr' River valley in summer 1929.

In July-Sept. the author went from Vladivostok to explore the forests of the Anadyr' basin for the Kamchatka Joint-Stock Company. In a report delivered to the Company in March 1930, he gives account of his trip by steamship along the Kamchatka coast and by motor-boat up the Anadyr' and Mayn Rivers, with visits to Petropavlovsk, Ust'-Kamchatsk, Karaginskiy Island, Novo-Mariinsk (now Anadyr'), Markovo, and other populated places. The account is followed by a brief summary (p. 62-67) of expeditions to the Anadyr' from the time of Dezhnev to the geological expedition of P. I. Polevoi in 1912-1913, and by an outline of the geomorphology and hydrography, the climate (p. 72-86), and the vegetation of the area, with extensive references to works of P. I. Polevoi (*Arctic Bibliography*, No. 25181) and others, and with results of timber surveys. The conclusion is reached that only the forests in the valley of the Mayn River are of (limited) commercial value. Tabular data on wind, atmospheric pressure, temperature, humidity, precipitation,

snow cover, are presented for Markova and Novo-Mariinsk (p. 74-86, 106-119). The tree line (Daurian larch) and advance of the forest into the tundra in the Mayn valley are considered (p. 86-88, 99-103). *Copy seen:* DLC.

36636. OWNBEY, GERALD BRUCE, 1916- . Monograph of the North American species of *Corydalis*. (Missouri Botanical Garden. Annals, Sept. 1947. v. 34, no. 3, p. 187-260, plates 28-31, 13 text maps)

Contains a monographic treatment of North American species of herbaceous genus *Corydalis*, with data on morphology, generic relationships, chromosomal complements, alkaloid properties, and economic importance. Keys to the sections, species and subspecies are given, followed by descriptions of ten species and several subspecies, with synonyms, critical notes, lists of specimens and data on distribution (text maps). *Corydalis pauciflora*, *C. sempervirens* and *C. aurea* ssp. *aurea* n. ssp. native to Alaska and Yukon Territory, are included. *Copy seen:* MH-A.

36637. OXFORD UNIVERSITY EXPLORATION CLUB. Oxford University West Spitsbergen Expedition, 1953. (Oxford University Exploration Club. Bulletin, 1954. no. 6, p. 19-22)

The six-man party, led by I. F. Davidson, carried out field work during July 11-Aug. 15, 1953. Objectives of the expedition were to cross Vestspitsbergen from Templefjord on the west coast to Negribreen on the east, to survey the area and carry on geological work. In this brief outline, comments are made on weather and snow conditions, tents, sledges, clothing and other equipment, and rations.

36638. PACKARD, ALPHEUS SPRING, 1839-1905. The Esquimaux of Labrador. (Appleton's journal, New York. Dec. 1871. v. 6, no. 141, p. 657-59) Reprinted in Beach's *Indian miscellany*. Albany, 1877.

Contains notes on a visit in summer of 1864 to the Labrador coast, accompanying the artist Wm. Bradford in the schooner *Benjamin S. Wright*. The Hopedale Eskimos are described: their appearance, dwelling and its interior, intelligence and skills, their trade and barter with the Whites, health conditions (heavy toll of TB), hostility of Indians, etc. Chief occupation of these Eskimos is fishing and hunting; gardening introduced was not successful. All are baptized and taught to read and write by the Moravian missionaries. Flora and fauna, climate, landscape and conditions of navigation are sketched.

36639. PACKARD, ALPHEUS SPRING, 1839-1905. The Labrador coast. A journal of two summer cruises to that region with notes on its early discovery, on the Eskimo, on its physical geography, geology and natural history. New York, N. D. C. Hodges, 1891. 513 p. illus., plates, maps incl. 1 fold. 195 refs.

Contains material mainly based upon observations and collections made by the author during the Williams College expedition of 1860 to southern Labrador and during a cruise up the coast to Hopedale in 1864, organized by Wm. Bradford, the American marine artist. Each trip is described with notes on flora, fauna, geology, and Eskimos. Results from three Canadian expeditions in the latter 19th century are also brought into the text of the other chapters, which deal with physical geography, history, fisheries, Eskimos, geology of the coastal region, zoology, and botany. Lists of invertebrates, insects, fishes, birds, and mammals are given, with brief notes on distribution, and a catalog of plants compiled by J. Macoun (Canadian Dept. of the Interior). Some of the chapters were published previously in journals, cf. *Arctic Bibliography*, No. 13022, et. seq., No. 31145. *Copy seen:* DLC.

36640. PADY, STUART MCGREGOR, 1905-, and **L. KAPICA.** Air-borne fungi in the Arctic and other parts of Canada. (Canadian journal of botany, May 1953. v. 31, no. 3, p. 309-323, tables) 16 refs.

The study is based on materials noted in No. 36642, also on some collected over the Arctic Ocean and the North Pole on two flights from Fairbanks with U. S. Air Force in Mar. 1949, and samples taken between Montreal and Edmonton. In the winter, arctic air was found to be sterile. In the summer, air-borne floras at Fort Churchill, Man. and Resolute Bay, Cornwallis Island were similar in composition but much lower in quantity over the latter area. *Cladosporium* was the commonest fungus (average 0.5 per cu. ft.) followed by yeasts (0.16), and several other species. Most forms are soil types originating in agricultural areas and carried north by winds. Most are not viable when they reach the Arctic.

Copy seen: DLC.

36641. PADY, STUART MCGREGOR, 1905-, and **C. D. KELLY.** Numbers of fungi and bacteria in transatlantic air. (Science, May 29, 1953. v. 117, no. 3048, p. 607-609, tables) 8 refs.

Contains report of an investigation made in June and August 1951 during two flights from Montreal to England and return, via Goose Bay, Newfoundland. Samples taken over land masses had higher numbers of fungi and bacteria than those over the ocean. Polar air masses had very low numbers, tropical air very high ones. **Copy seen:** DLC.

36642. PADY, STUART MCGREGOR, 1905-, and **C. D. KELLY.** Studies on microorganisms in arctic air during 1949 and 1950. (Canadian journal of botany, Jan. 1953. v. 31, no. 1, p. 107-122, 2 text maps, 4 graphs, 6 tables) 9 refs.

Contains brief summary of previous aerobiological studies and a description of sampling at ground level at Churchill, Man., daily during July-Aug. 1950, and in flight from Winnipeg, Man., to Baker Lake (Keewatin District) in July 1949, also (two) from Churchill to Resolute Bay (Cornwallis Island) in Aug. 1950. Methods of sampling are described in some detail and conclusions are discussed. Daily averages of bacteria at ground level ranged from 0.9 to 30.1 per cu. ft., and in flight to Resolute Bay from 0.3 to 0.9. Comparable readings for fungi were 0.5 to 4.4 and 0.01 to 0.7 per cu. ft. Most of

the organisms were soil-inhabiting forms but some fungus parasites were found. "Evidence indicates that winds originating in the south carry large numbers of organisms northward, many of which are nonviable when they reach the Arctic, while north winds of polar origin contain very low numbers even in the summer." Summarized in *Polar record*, Jan. 1954. v. 7, no. 47, p. 38-39.

36643. PAGAST, FELIX. Systematik und Verbreitung der um die Gattung *Diamesa* gruppierten Chironomiden. (Archiv für Hydrobiologie, 1947. Bd. 41, Heft 4, p. 435-596, 84 illus.) 84 refs. Text in German. **Title tr.:** Systematics and distribution of Chironomidae of the genus *Diamesa* and allied genera.

Contains tables for the determination of the genera of the *Diamesa* group (p. 444-46) and species (imagines) of *Diamesa* (p. 464-66), and some other genera; descriptions of the genera (five are new) and species (seven are new); a treatment of the pupae of these chironomids (p. 504-42) with keys to the genera and species, and descriptions of individual genera and species. The systematics of the *Diamesa* group are discussed on the basis of the morphology of imagines and pupae, (p. 542-60); data are given on occurrence, geographic distribution and ecology of the group, arranged by the genus (p. 560-88). Doubtful species and those not seen are listed. At least fifteen species native to Lapland, Novaya Zemlya, Jan Mayen, Greenland, Spitsbergen and Kamechatka, are included.

36644. PAGE, WILLIAM B. Design of water distribution systems for service in arctic regions; experimental study of a new dual main house service connection. (Water & sewage works, Aug. 1954. v. 101, no. 8, p. 333-37, 10 graphs & diags, 3 tables) 5 refs.

"Scale-model experiments to determine the feasibility of a dual-pipe continuous-flow system for domestic water supply in the Arctic are described; the equipment is diagrammed; and test-result data are tabulated. Fifteen types of orifices for connecting the domestic system to a 4-in. main were tested with domestic pipe 25 and 113 ft. long and flow rates in the main from 0.99–4.10 ft./sec. Results indicate that a house flow of 0.17 ft./sec. can be maintained with the proper orifice and a main flow of 2 ft./sec., a velocity economically feasible for small communities in the Arctic."—SIPRE. Systems presently used in Alaska and northern Canada are briefly described by the writer, Arctic Health Research Center, Anchorage. **Copy seen:** DLC.

36647. PALMÉN, ERNST. The Diplopoda of eastern Fennoscandia. Helsinki, 1949. 54 p. 16 text maps, table. (Suomalainen eläin- ja kasvitieteellinen seura Vanamo. Eläintieteellisiä julkaisuja. Osa 13, no. 6) 43 refs. Text in English. Summary in Finnish.

Following tabulation of the diplopods (millepedes) and their distribution in this region (table, p. 3), the 24 species, representing six families and 17 genera, are reviewed (p. 4–45) with data on autecology and geographic distribution (text maps). An ecological survey is made of the diplopod populations of some habitat types of the region (p. 45–50). Of the 24 species only 14 are indigenous, the others occurring in greenhouses or in the immediate neighborhood of human settlements; *Proterolius fuscus* extends beyond the Arctic Circle.

Contains a study of winter grounds of the Kennicott or Alaska willow warbler, *Phylloscopus borealis kennicotti*, based on comparison of Alaskan specimens with such from other regions. The conclusion is that this species "winters commonly in the Philippine Islands and sparingly in the Indo-Chinese countries, Malaysia and the East Indies east to the Moluccas; known to migrate through eastern China (Shantung; Yunnan)."

36668. PARMUZIN, IŮ. P. Voprosy karstovedeniâ Sibiri. (Vsesoiŭznoe geografičeskoe obščestvo. Izvestiâ. Jan.-Feb. 1954. t. 86, no. 1, p. 34-49) 48 refs. Text in Russian. **Title tr.:** Problems of karst study in Siberia.

A general discussion of karst formations in Siberia, based, as the author admits, on very scarce and incomplete material. Their probability in arctic and subarctic regions (Noril'sk region, Vilyuy, Olenek and Kotuy River basins) and of their absence in Kamchatka is mentioned. Karst formations "in permafrost regions must be classified as a peculiar geographical type, produced by subpermafrost waters. Cave-forming processes favor permafrost degradation."—SIPRE.

36669. PAROVSHCHIKOV, V. IĀ. Migratsiâ belki i rasselenie ondatri v Severnom krae. (Sovetskoe kraevedenie, Apr. 1936. no. 4, p. 18-25, illus.) Text in Russian. **Title tr.:** Squirrel migration and muskrat distribution in the Northern Province.

Due to changes in its seasonal migration, the annual catch of squirrel in the Northern Province fluctuated between one-half and four million during 1924-1936. Systematic study of this fluctuation revealed a five-year periodicity related to abundance or scarcity of food (spruce and pine cones, etc.) and this relationship enables the yield from squirrel-hunting to be forecast. The acclimatization of the North American muskrat in the northern European part of the U.S.S.R. began in 1929; the localities of the spread are indicated; and the muskrat population in 1936 was estimated at 80 thousand.

36670. PARRAN, THOMAS, 1892- , and others. Alaska's health: a survey report to the United States Department of the Interior by the Alaska Health Survey Team. Pittsburgh, The University of Pittsburgh Graduate School of Public Health, 1954. 7 chap. pagged separately. 19 text fig., 23 tables, 3 charts. Over 200 refs. **Other authors:** A. Cioeco, J. A. Crabtree, W. J. McNerney, J. R. McGibony, S. M. Wishik, and M. Q. Elder.

Results of a study of the health problems of the Territory and suggestions how its resources "can be mobilized to secure the degree of health and fitness necessary for Alaskans to become more socially useful citizens." Following an introduction (9 p.) on the origin, sponsors, methods of the survey; its authors, interim recommendations, etc., is chap. 1, *Alaska: unfinished business* (12 p.), presenting the major findings of the survey, essential conclusions and recommendations. Chap. 2, *The Land and the people* (53 p.), deals with history, geography and climate; resources and economy; government; acculturation and health; demographic traits. Chap. 3, *Alaska's health conditions* (19 p.) covers mortality, communicable diseases, natives' sickness, specific problems. Chap. 4, *Health agencies* (76 p.) describes and appraises the Alaska Native Service, Arctic Health Research Center, the Territorial Dept. of Health and other agencies, also federal and voluntary agencies. Chap. 5, is *Health facilities and personnel* (21 p.). Chap. 6, *Health problems and services* (113 p.), reports on tuberculosis and other communicable diseases and their control; mental health; maternal and children's health; nursing services, laboratories,

collections, statistics, etc. Chap. 7. *Food for health* (6 p.), describes social and nutritional conditions as the basis of Alaska's health problems.

36674. PATKANOV, SERAFIM KEROPOVICH. Spisok narodnostei Sibiri. Petrograd, 1923. 16 p. 14 refs. (Akademii nauk SSSR. Komissii po izucheniiu plemennogo sostava naseleniia

SSSR i sopredel'nykh stran. Trudy, vyp. 7) Text in Russian. **Title tr.:** A list of the nationalities in Siberia.

Contains statistical data (p. 1-10) on the Siberian population, based on the census of 1897. Living places, migration, and dialects are noted briefly. Among others are: Ostyaks (17,221), Zyryans (9,186), Yuraks (5,371), Tawgis (1,326), Ostyak Samoyeds (5,805), Yakuts and Dolgans (226,739), Tungus (76,504), Yeniseians (988), Yukaghirs (754), Chuvantsy (453), Kamchadals (2,805), Koryaks (7,335), Chukchis (11,771), Gilyaks (4,649), Aleuts (574), and Asiatic Eskimos (1,307). Number of males and females are indicated. Appended are: "Prilozhenie k spisku sibirskikh turok" (Supplement to the list of Siberian Turks) by A. N. Samoilovich (p. 11-13); and "Prilozhenie k spisku narodnostei Severo-vostochnoi Sibiri" (Supplement to the list of nationalities of the northeastern Siberia) by V. I. Jochelson (p. 14-15). The last corrects some data on Paleo-Siberians, on the basis of later counts made by V. G. Bogoraz in 1900-1901 and Jochelson himself in 1909-1911, as follows: Koryaks: 7,530 in 1900 (3,782 settlers and 3,748 nomads); Chukchis: about 12,000 (about 9,000 nomads); Asiatic Eskimos: 1,200 in 1900, and 108 on Big Diomed Island; Yukaghirs: 1,003; Kamchadals: 2,182 in 1911; Aleuts on the Commander Islands: 501 in 1910. Native self-naming is discussed, and it is stated that Chukchis, Koryaks and Kamchadals belong to the same ethnic group. Patkanov's work is praised in an introduction by L. Shternberg, and his publications (14 items) are listed on p. 16.

36675. PATON, HUBERT A., and K. B. JEFFERS. Arctic shore party: Icy Cape unit. Washington, D. C., 1948. 24 p. illus. (U. S. Coast and Geodetic Survey. Season's report, no. 164 (1948). Project CS-320)

"Alaskan triangulation and hydrographic operations conducted from late March and early April [1948] until Sept. are reported. Supplies were hauled by caterpillar train from Barrow Base, Peard Bay and Wainwright to the vicinity of Icy Cape [70°22' N. 161°45' W.]. Caterpillar tractors operate satisfactorily under all weather conditions and should be equipped with a winch for towing. Long hauls over ice should be made be-

tween Feb. 1 and April 15, at night whenever possible. Summer travel in the area is difficult, but reconnaissance would be much easier and safer after the snow has melted. Three large rivers emptying into Kasegaluk Lagoon S. of Icy Cape begin to flow early in June, and the discharge melts the lagoon ice forming large open areas by late June. Ice remains on the lagoon several weeks longer E. of Icy Cape because of a smaller influx from land streams, while the sea in the Point Lay vicinity was entirely free of ice on July 27."—SIPRE.

Copy seen: DCGS (typed ms.).

36676. PATON, HUBERT A. Report on movement of station marks, arctic shore, Alaska. Washington, D. C., Jan. 13, 1949. 29 p. tables. (U. S. Coast and Geodetic Survey. Special report, no. 159 (1948). Project CS-320)

"Twenty-one triangulation stations established in 1947 were visited in 1948 and the distance to reference marks re-measured. Less than 4 percent differed by more than 0.03 m. and the remainder showed an average difference of only 0.0071 m. between the 1947 and 1948 measurements. No heaving of monuments through frost action was noted, and the discrepancies between winter and summer measurements for 8 stations in the vicinity of Barter Island [70°08' N. 143°40' W.] were small. Pipes about 2 ft. long which did not reach the permafrost were loose enough to be moved about 1 cm. but their use has been superseded by 5-ft. pipes."—SIPRE.

Copy seen: DCGS (ms.).

36677. PATON, HUBERT A., and K. B. JEFFERS. Second order triangulation: Arctic coast of Alaska, Icy Cape to Cape Beaufort. Washington, D. C., Oct. 7, 1949. 5 p. (U. S. Coast and Geodetic Survey. Season's report, no. 115 (1949). Project CS-320)

"Triangulation was established during 1949 to provide permanently marked horizontal control stations along the arctic coast of Alaska [69°04' N. 163°38' W.—70°22' N. 161°45' W.]. The area has relatively little snow precipitation, but the prevailing winds produce snowdrifts trending NE-SW and almost ice-hard. Travel is difficult because of the uneven snow surface, poor visibility and the lack of a definite horizon. Station marks on 2.5-in. pipe are set in holes melted in the ground with a 6-ft. steam point fed from a prospector's boiler.

Small holes in the lowest 2 ft. of the pipe admit mud and water to facilitate ad-freezing and prevent frost heaving."—SIPRE.

Copy seen: DCGS (typed ms.).

36678. PATON, HUBERT A., and C. A. J. PAUW. Weather report, Arctic field party, 1948. Washington, D. C., Mar. 3, 1949. 5 p. tables. (U. S. Coast and Geodetic Survey. Special report, no. 5 (1949). Project CS-320)

"The weather and ice conditions from March-Sept. along the coast from Barter Island-Icy Cape (Alaska) [70°08' N. 143°40' W.—70°22' N. 161°45' W.] are described. Temperatures and wind velocities are tabulated for Point Barrow, Barter Island, and Icy Cape, and visibility for Barter Island. Breakup begins in the larger rivers and lagoons; narrow strips along shore clear first in the Barter Island region. The large rivers discharging into Kasegaluk Lagoon south of Icy Cape begin to flow in early June; but the mouth of the Kuk River was choked with ice until Aug. 3 and the sea ice did not open until mid-July. Freeze-up occurs first in the lagoons, and 10-15 days of continuous cold weather after the sea surface has been covered with young ice will produce a trafficable ice cover."—SIPRE.

Geomorphic, geological, botanical and ethnographic sketch of the Vilyuy River basin, based on observations during author's participation in the Vilyuysk Expedition 1853-1855, his travels as administrative head of the district, and his trip to the upper reaches of the river in 1865. He distinguishes three geomorphic sections of the basin: (1) the upper part from source to the tributary Vilyuchan (approx. 62°32' N. 115°43' E.), a mountainous uncultivated region, sparsely populated by Tungus hunters; (2) the middle section from the Vilyuchan to the town of Vilyuysk, a hilly region, with abundant meadows, suitable for animal husbandry and agriculture, with 43,800 (mainly Yakuts) of the district's total population of 56,200 in 1864; (3) the lower part, from Vilyuysk to the Lena River, a low-lying, humid region, a reservoir of stagnant water in the many lakes and marshes, considered the source of leprosy and other diseases; fisheries is the main industry. From the Vilyuy mouth to the town of Suntar (62°08' N. 118°39' E.), diluvial sands bedded on Jurassic limestone are the main geologic features, and large dunes occur on the banks; fossil animal bones, among them rhinoceros, were found in the sands (e. g., near Kentik, 120 versts above Vilyuysk). Iron ores in the upper basin supply iron for local needs and export to Olekminsk; salt springs are abundant in the Kempendyay River basin Kempendyayskiy and Baginskiy saline springs, (p. 85-88). Brown coal is found in the basin of the Chona (61°42' N. 111°50' E.). Remarks on the Yakuts, their cattle breeding, barley cultivation, hunting and fishing, etc., are scattered through the text; 30 edible or medicinal plants

are listed (p. 34-37) with their Yakut, Russian and Latin names, preparation and use; pine and larch, commonest trees of the region and often mentioned in Yakut folklore, are noted as used (the bark) as a grain substitute.

36686. PAYNE, F. F. Eskimo of Hudson Strait. (Royal Canadian Institute, Toronto. Proceedings, 1887-88, pub. 1889. ser. 3, v. 6, p. 213-30)

Contains a description of the more interesting aspects of life of Eskimos of the area particularly those around Cape Prince of Wales on the northern coast of Ungava Peninsula. Many of them had never seen white men before the Canadian Hudson's Bay Expeditions of 1884-86 maintained a meteorological station in the vicinity, where the writer lived for a thirteen-month period. The houses and tents, reindeer hunting, sealing and walrus hunting are described, with details on implements and technique. A list of edible plants and animals is given. Eskimo carvings and drawing of figures on the snow surface are mentioned, also, and in more detail, the amusements (throwing the harpoon, tilting, a football game and children's play), trade, morals and family life, beliefs, traveling abilities, etc.

Unpublished report (thesis?) on the effects of white men on behavior, ethics, and mental processes of the Eskimo. The primitive Eskimo and his folklore are described, the penetration of Whites in exploration, trade, evangelization; introduction of white man's laws; law of supply and demand among the Eskimos; abandonment of old mode of life; mutual attitudes of Eskimos and Whites. Psychology of the Eskimo is dealt with: language, thought and mental processes, behavior (instincts, memory, learned behavior, imagination, etc.). White men among the Eskimos, settlers, traders, civil servants, fishermen, missionaries, and their motives are analysed. The "fusion and clash of cultures" is discussed, and some inferences and deductions. Appended is an historical note on the Moravian brethren; a glossary of Eskimo words, and a list of mammals and birds, berries and plants used for food.

Peck's Eskimo grammar (*Arctic Bibliography*, No. 13243) is here revised and enlarged by Maurice S. Flint. In addition to the main detailed section on parts of speech and their use (in English and in Eskimo syllabic and roman characters), there is a brief discussion of early attempts to reduce the Eskimo language to writing, and on the origin and use of the syllabic characters by Peck. A vocabulary of 300 Eskimo words is presented in a topical arrangement: animals, parts of the body, colors, dress, kinsmen, etc.

36691. PEDERSEN, EINAR. Over the Pole by commercial air. (Canadian aviation, Sept. 1953. v. 26, no. 8, p. 46, 104-108, illus. map)

Description of the first commercial transpolar flight by the Scandinavian Airlines System DC-6B *Arild Viking* on Nov. 19, 1952 from Los Angeles to Copenhagen via Edmonton and Thule. The Eclipse-Pioneer "Polar Path" directional gyro control system controlled the automatic pilot from near Edmonton to the east coast of Greenland. Gridheading was checked every 20 minutes using Jupiter and the heading of the "Polar Path" gyro. The gyro had an average drift of 10°/hr. to the right. The total time of flight was 24 hrs. 7 min. Author is chief navigator, SAS; paper was delivered to Society of Automotive Engineers, New York. **Copy seen:** DLC.

Contains brief survey of developments in transpolar flight, indicating the reductions in flight time which can be achieved. The possibility of flying scheduled services between America and Scandinavia via the Arctic with reference to the Scandinavian Airline System's project is mentioned. **Copy seen:** DLC.

36693. PEDERSEN, P. O., 1910- , and E. HINSCH. Meddelelser om odontologiske undersøgelser i Grønland, IV. Om variationer i tandantallet hos Grønlandere. (Tandlaegebladet, 1940. 44

Aarg. no. 2, p. 51-85, illus., tables, map) 95 refs. Text in Danish. Summary in German. Cf. this report in English, *Arctic Bibliography* No. 25018; reports 1-3 are *ibid.* 13263-13265. **Title tr.:** Reports on odontological investigations in Greenland, 4; on variations in teeth number among Greenlanders.

Study on variations in the number of teeth in pre-colonial and present-day Greenlanders. The investigation is based on 525 Eskimo skulls dating before or to the beginning of white colonization; 860 present-day Eskimos of pure blood from East Greenland; 1634 largely mixed stock from southwest Greenland. X-ray examinations were performed on most cases of first two groups. Conditions are compared with those in white and other mongoloid races. **Copy seen:** DSG.

36694. PEDERSEN, P. O., 1910- . Meddelelser om odontologiske undersøgelser i Grønland, V. Rapport over Expedition til Vestgrønland 1939. (Tandlaegebladet, May 1940. Aarg. 44, nr. 5, p. 287-98, table) Text in Danish. Summary in German. **Title tr.:** Reports on odontological investigations in Greenland, 5; report on the expedition to West Greenland of 1939.

Contains an account of the third Danish Odontological Expedition to Greenland, headed by the author. The studies were conducted in the Julianehaab District and included: thorough clinical investigation (702 persons); X-ray (115 persons); models of jaws and teeth (245 persons); saliva examinations; blood and serum tests, etc. **Copy seen:** DSG.

36695. PEDERSEN, P. O., 1910- . Meddelelser om odontologiske undersøgelser i Grønland, VII. Om medfødte kaebe og ansigtsmisdannelse hos grønlandske Eskimoer og den vestgrønlandske blandingsrace. (Tandlaegebladet, Sept. 1942. Aarg. 46, nr. 9, p. 375-85, illus.) 30 refs. Text in Danish. Summary in English.

Previously published in German as Über angeborene Missbildungen im Bereiche der Mundhöhle bei grønlandischen Eskimos und westgrønlandischen Mischlingen, in: Zeitschrift für Rassenkunde und die gesamte Forschung am Menschen 1941, Bd. 12, Heft 1, p. 20-27. **Title tr.:** Reports on odontological investigations in Greenland. VII. Congenital jaw and face malformations in Greenland Eskimos of the West Greenland mixed race.

A description is given of partial cleft palate with congenital absence of teeth in a female skull from the Umanak district, found among 675 Greenland Eskimo skulls examined at the Normal Anatomical Museum, University of Copenhagen. Cases of cleft palate found by author among 860 East Greenlanders in 1937, as well as similar observations made by other investigators, are also presented. The author's three dental expeditions to Greenland (1935, 1937, 1939) were supported by the Danish Government and the P. Carl Petersen Fund.

36696. PEDERSEN, P. O., 1910- . Meddelelser om odontologiske undersøgelser i Grønland, VIII. Retention af taender hos grønlandske Eskimoer. (Tandlaegebladet, Jan. 1943. 47 Aarg. nr. 1, p. 1-61, illus., tables, map) 220 refs. Text in Danish. Summary in English. **Title tr.:** Reports on odontological investigations in Greenland. VIII. Impaction of teeth in Greenland Eskimos.

Contains a study of 526 crania or their parts, some going back to the beginning of Danish colonization (1721), and of 737 pure-blood Eskimos from East Greenland, with X-ray examinations made in both cases; 8.1 percent of the Eskimos examined showed impaction of one or more permanent teeth. As 55 percent of the teeth in the skulls were lost *post mortem* no comparison with earlier conditions is made. Special attention is given to impaction of third molars, and various hypotheses explaining it are discussed. Some pathological conditions are also presented.

36698. PEKARSKIĬ, PETR PETROVICH, 1828-1872. Istoriia Imperatorskoi Akademii nauk v Peterburgë. Sankt-peterburg, Tip. Akademii nauk, 1870-1873. 2 v.: lxxviii, 775 p.; lviii, 1042 p., front. (facsim.) Text in Russian. **Title tr.:** History of the Imperial Academy of Sciences in Petersburg.

Contains biographies of presidents and members of the Academy, preceded by a short survey of its history and administration during 1725-1742 (v. 1.) and 1742-1766 (v. 2), based chiefly on unpublished materials. Among the biographies are the following of members of the Academy, who took part in the Great Northern Expedition, 1725-1743, or otherwise participated in arctic explorations:

Delil' de-la-Krofer, Lûndovik, êkstraordinarnyi akademik, astronom Akademii nauk (Louis Delisle de La Croyère, member extraordinary of the Academy, astronomer) v. 1, p. 149-55. French scientist, who served in Russia as astronomer; in 1727 he was sent to make observations in Arkhangel'sk and Kola Peninsula; in 1733 he joined the Great Northern Expedition; worked in Yakutsk in 1737; and in 1741 participated in the voyage of Chirikov on the *Sv. Pavel* to the North American coasts but died on the very day of the vessel's return to Kamchatka (Oct. 10, 1741); his publications are listed, p. 154-55.

Müller, Gerard-Fridrikh, russkie ego zvali Fedor Ivanovich, akademik, istoriograf i nepremennyy sekretar' Akademii (Gerhard Friedrich Müller, called by the Russians Fedor Ivanovich, member of the Academy, historiographer, and permanent secretary of the Academy) v. 1, p. 308-403. Extensive account of this German scientist, 1705-1783, who worked in Russia from 1725 till his death and was an outstanding member of the Academy of Sciences. During 1733-1743 he was in Siberia with the Great Northern Expedition as its historian, working mostly with J. G. Gmelin; he wintered 1734-36 in Yakutsk, visited Mangazeya (Turukhansk) in 1739, and collected a great amount of materials, chiefly referring to the history of Siberia; on return to St. Petersburg, he took part in the preparation and editing Krashenninnikov's *Opisanie zemli Kamchatki* (*Arctic Bibliography*, No. 9265), and after the author's death supervised its publication. His activities in Siberia are described (p. 321-32), his publications listed (p. 418-24).

Gmelin, Iogann-Georg, akademik po kafedre khimii i natural'noi istorii (Johann Georg Gmelin, member of the Academy, chair of chemistry and natural history) v. 1, p. 431-57. This German naturalist 1709-1755, was appointed professor of the Russian Academy of Sciences in 1731, and during 1733-43 participated in the Great Northern Expedition, working chiefly in association with the historian G. F. Müller; he wintered 1735-36 in Yakutsk; made a trip to Turukhansk; and in 1739 his travels resulted in the four-volume *Flora Sibirica*, 1747-1769 (*Arctic Bibliography*, No. 5827), and in his four-volume *Reise durch Sibirien*, 1751 (No. 34919); his criticism of Russia in the latter work raised indignation of some circles in Russia. His works, published by Academy of Sciences, are listed (p. 455-56).

Steller, Georg-Vil'gel'm, ad'munkt po kafedre natural'noi istorii (Georg Wilhelm Steller, scientific assistant, chair of natural history) v. 1, p. 587-616. Biography of the German-Russian scientist, 1709-1746, who came to Russia in 1734 and in 1737 was sent by the Academy of Sciences to take part in the work of the Great Northern Expedition; after two years' stay in Siberia, he went on to Kamchatka in 1740, and in 1741-42 participated in the Bering's voyage on *St. Petr* to Alaska; in 1742-44 made

explorations on Kamchatka and died in Tyumen' on the way back to St. Petersburg. The controversial reports on circumstances of his death are critically analyzed (p. 606-611). Mss. left by Steller are listed (p. 613-16).

Fisher, Iogan-Ëbergard, akademik po kafedre istorii i drevnostei (Johann Eberhard Fischer, member of the Academy, chair of history and antiquities) v. 1, p. 617-36. This German-Russian philologist and historian, 1697-1771, sent by the Academy of Sciences in 1739 to take part in the work of the Great Northern Expedition, was in Siberia during 1740-1746; he reached as far as Yakutsk and the basin of the Yudoma River (in 1742); his character and behavior roused much criticism; his stay in Siberia resulted in his *Sibirische Geschichte* 1768, q. v. His publications are listed (p. 632-36).

Lomonosov, Mikhail Vasil'evich, akademik po kafedre khimii i sovetnik akademicheskoi kantselearii (Mikhail Vasil'evich Lomonosov, member of the Academy, chair of chemistry, and the counsellor of the secretariat of the Academy) v. 2, p. 259-963. Monograph on the life and activities of the famous Russian scientist, philosopher, statesman and poet, 1711-1765; his works and activities referring to exploration of the arctic seas are stressed (p. 801-810).

36699. PELLERAT, J., and Mlle. M. MURAT. L'histamine cutanée; ses variations sans l'influence du froid, au cours de l'allergie tuberculinique et dans certaines dermatoses. (*Annales de dermatologie et de syphiligraphie*, Feb. 1946. ser. 8, v. 6, p. 76-84, tables) 20 refs. Text in French. **Title tr.:** Cutaneous histamine; its variation under the influence of cold, in tuberculin allergy and in certain dermatoses.

The investigation includes determination of histamine content of normal human skin (ca. 20 mg/kg); it also suggests liberation of histamine under the influence of local low temperature.

Copy seen: DSG.

36700. PELTIER, LOUIS COOK, 1916- The geographic cycle in periglacial regions as it is related to climatic geomorphology. (*Association of American Geographers, Annals* Sept. 1950. v. 40, no. 3, p. 214-36, diagrs., graphs, table) 70 refs.

Periglacial regions are defined as those with estimated range of average annual temperature 5°-30°; with estimated range of average annual rainfall 5-55 in.; and characterized by strong mass movement, moderate to strong wind action, and weak effect of running water. The periglacial cycle and definition of terms used in its description are discussed. Three coexisting types of erosion surface may be produced: (1) surface of down-wastage or denudation produced by congeliturbation; (2) surface of lateral planation, produced by congelifraction wherever the water table and the zone of frequent freezing and thawing coincided, and aided by congeliturbation; and (3) stream-graded surfaces, frequently aggraded. Includes comments by R. J. Lougee on movement of solifluction terraces north of Nome, Alaska.

36701. PELZER, ERNEST E. The Rankin Inlet nickel-copper deposit; a microscopic study. (Canadian mining journal, Sept. 1950. v. 71, no. 9, p. 79-83, illus.)

"A mineragraphic study of the Rankin Inlet [west side of Hudson Bay, 62°45' N. 92° W.] sulfides reveals the presence of magnetite, pyrrhotite, pentlandite, chalcopyrite, pyrite, marcasite, violarite, and possibly gersdorffite. The textural relationships indicate a magmatic origin for the principal minerals. Some pyrite may have been introduced hydrothermally, and marcasite and violarite have formed as supergene alteration products of pyrrhotite and pentlandite respectively."—Author's abstract.

Copy seen: DGS.

36702. PENDLETON, C. R. The cold receptor. (American journal of psychology, July 1928. v. 40, no. 3, p. 353-71, fig., 4 tables) 19 refs.

Author found no Golgi-Mázzoni end-bulbs in autopsies of hairy skin nor in biopsies of hairless skin containing cold-spots. The cold-receptors were calculated to lie in the stratum malpighi. The latter contains free nerve endings and also hederiform nerve endings of Ranvier, believed to be cold-receptors.

A study of landscapes of European Russia with special reference to geological and mineralogical factors influencing them. Earlier Russian work in this field and Polynov's contributions are reviewed. Landscapes of the region—including the tundra and taiga—and their geochemical characteristics are outlined generally, and a detailed analysis given (on the basis of three principal types of rock formation) of some arctic landscapes and their characteristics. The role of man in changing the landscape is noted, and the importance of geochemical migration of the elements of the earth crust and their influence on the development of natural landscapes is stressed. A detailed color map (scale 100 km. : 1 cm.) of the geochemical landscapes of the area, and representative illustrations, illuminate the study.

36704. PEREVALOV, V. A. Semen Dezhnev i ego geograficheskie otkrytiia. (Nauka i zhizn', Apr. 1949. t. 16, no. 4, p. 20-22, port., map) 6 refs. Text in Russian. **Title tr.:** Semen Dezhnev and his geographical discoveries.

Brief sketch of the life and achievements of S. Dezhnev, ca. 1605-1673, occasioned by the third centenary of his discovery in 1648, of the strait dividing Asia from America; the map shows the supposed routes of Dezhnev's expeditions and voyages, 1638-1670.

Copy seen: DLC.

36705. PEREVALOV, V. A. Semen Ivanov Dezhnev. (In: Lupach, V. S. Russkie moreplavately, 1953, p. 21-32, illus.) Text in Russian.

Contains biographical data on Dezhnev (ca1605-1673), followed by notes on his travels in northern Siberia (Yana, Indigirka and Kolyma Rivers) and on his famous voyage in 1648 with F. A. Popov, as the head of a 90-man expedition on six

koehs. He sailed from the mouth of the Kolyma eastward, entered and passed through Bering Strait, and finally landed with 25 men (the rest were lost) to the south of the Anadyr River mouth. He was the first known explorer to sail through Bering Strait, 80 years before its "discovery" by Bering.

port.) 33 refs. Text in Russian. **Title tr.:** In memoriam, N. P. Annenkova, 1887-1950. *Other authors:* P. V. Ushakov and A. A. Shtakel'berg.

Contains a brief biography and an appreciation of the scientific activity of N. P. Annenkova, a pioneer in the study of Polychaeta of the northern seas of the U.S.S.R. A bibliography of her works is added.

Copy seen: DLC; MH-Z.

36709. PERGANDE, M. C. *The secret of White Island. (Nature science, May 1954. v. 68, no. 5, p. 200-205, 8 illus., map)*

Story of how the crew of the whaler *Bratvaag* in Aug. 1930, came upon the bodies and camp remains of Andrée's 1897 balloon expedition, on Kvitøya (White Island), easternmost of the islands of Svalbard. The course of the expedition is recounted from the diaries found, and speculation is offered on the cause of disaster to this well-equipped party; Dr. Stefansson's circumstantial deduction of carbon-monoxide poisoning is discussed. The photographic illus. of Andrée's expedition include three from negatives found with the remains on Kvitøya.

Copy seen: DLC.

36710. PERKINS, JOHN F., Jr. *The role of proprioceptors in shivering. (American journal of physiology 1946. v. 145. p. 264-71)*

Studies of normal animals, animals with one hind limb deafferented, hemidecerebellate animals and animals with one dorsal column of the spinal cord sectioned. It is concluded "that the rhythmic movements of shivering are determined by a peripheral mechanism involving the proprioceptors rather than by a pacemaker action of a shivering center in the central nervous system."—*Psychological abstracts*, 1947. v. 21, p. 256-57.

Copy seen: DLC.

36711. PERLMUTTER, HELEN. *Arctic rescue. (American helicopter, Dec. 1945. v. 1, no. 1, p. 38-39, illus.)*

Contains brief account of the rescue of eleven Royal Canadian Air Force flyers marooned about 200 miles from Goose Bay, Labrador, by U. S. Air Force Sikorsky helicopter in Apr.-May 1945. The helicopter was flown to Goose Bay on a Skymaster from Floyd Bennett Field, N. Y. and assembled by its crew twelve hours after arrival.

36715. PERSSON, BENGT O. E. Beståndighet och bärighet hos ett istäcke. (Svenska vägföreningen, Stockholm. Tidskrift, Dec. 1948. Årg. 35, p. 406-417, incl. graphs, map, diagrs.) Text in Swedish, English translation, No. 36716. **Title tr.:** Durability and bearing capacity of an ice cover.

"Various conditions under which cracks in sea and lake ice occur are discussed. Turbulent eddies are a frequent cause of ice-cover destruction. The partial break-up of the winter road over the northern Swedish lake Lansjärv [66°40' N. 22° E.] . . . is cited as an example. The bearing capacity of ice was measured and the values obtained were in good agreement with those derived from Westergaard's formula. The values ranged from 386 kg. for a 4.7-cm. ice cover to 2920 kg. for a 13.0-cm. cover. Calculated values given for the bearing capacity of an ice cover must be used cautiously in practical applications."—SIPRE.

Copy seen: DPR.

36716. PERSSON, BENGT, O. E. Durability and bearing capacity of an ice layer . . . Tr. by William C. Dias, U. S. Army. Corps of Engineers. Arctic Construction and Frost Effects Laboratory, New England Division. (Investigation of construction and maintenance of airdromes on ice 1953-1954). Boston, Apr. 1954. 19 p. 13 fig. (diagr., graphs), map. English translation of the item above. **Copy seen:** DLC.

36717. PERSSON, HERMAN, 1893- Mosses of Alaska-Yukon. (Bryologist, Sept. 1954. v. 57, no. 3, p. 189-217) 36 refs.

Contains an account of mosses of wider distribution in this region, not treated in the author's previous papers (cf. *Arctic Bibliography*, No. 13328-13329, 25045-25046). Morphology, taxonomy and ecology are the main aspects discussed. **Copy seen:** DSI-M.

36721. PERVAKOV, I. L. Petr Fedorovich Anzhu. (In: Lupach, V. S. Russkie moreplavately, 1953, p. 226-34, port.) Text in Russian.

Contains a biographical sketch of this naval officer and arctic explorer, who surveyed the northern coast of Siberia between the Olenek and Indigirka Rivers and the New Siberian Islands, as the head of so-called Ust'-Yana Expedition in 1820-23. He was the first explorer to map and describe the northern coast of Koteln'nyy Island and to compile the first good map of the New Siberian Islands. He also collected important data on meteorology, hydrography and ethnography, vegetation and fauna of the region.

Copy seen: DLC; MH.

36722. PERVAKOV, I. L. Vladimir Aleksandrovich Rusanov. (In: Lupach, V. S. Russkie moreplavately, 1953, p. 327-34, port.) Text in Russian.

Contains a biographical sketch of Rusanov, 1875-1913, geologist and ex-

plorer; and an account of his six trips to Novaya Zemlya. In 1907, 1908 and 1909 he studied the geology and made two traverses of the South Island. In 1910 and 1911 as the head of government-sponsored expeditions, he circled the North and South Islands, described the coast and carried out topographic and hydrographic studies. In 1912 he sailed on the motor vessel *Gerkules* to Vestspitsbergen and studied coal deposits, then sailed through Matochkin Shar into the Kara Sea and proceeded eastward in an attempt to reach the Pacific Ocean. The *Gerkules* was apparently wrecked near the Taymyr Peninsula in 1913 with the loss of all (11 persons) on board.

36725. PESTELLINI, G., and C. VAN-NOCCI. Influenza del raffreddamento corporeo sulle asimmetrie posturali determinate da lesioni cerebrali, cerebellari e labirintiche. (Società italiana di biologia sperimentale. Bollettino, Mar.

1942. v. 17, p. 200-202) Text in Italian. **Title tr.:** Influence of body cooling on postural asymmetry caused by cerebral, cerebellar and labyrinthine lesions.

Guinea pigs with unilateral lesions of the cortex, with lesions of the cerebellum, or with one labyrinth destroyed, were cooled in water of 17°-19° C. Postural lesions caused by the previously mentioned injuries were studied under these conditions as well as in non-cooled controls. **Copy seen:** DSG.

36726. PETERS, JAMES LEE, 1889-, and **L. GRISCOM.** Geographical variation in the savannah sparrow. (Harvard University. Museum of Comparative Zoology. Bulletin, Jan. 1938. v. 80, no. 13, p. 443-78, 2 plates)

Contains a critical revision of 12 geographic races (subspecies) of *Passerculus sandwichensis*, with synonyms, diagnoses of two new subspecies, descriptions, measurements, ranges, data on breeding grounds, migration, winter localities, records of material examined, and discussions of each race. At least six subspecies are recorded in Alaska, Southeast Alaska, Aleutian Islands and in the northern regions of Canada. Remarks on "large-billed" sparrows (*rostratus* group) and a table of statistical data on the examined material are added. Emendations were made by G. Willett in *Remarks . . . sparrow*, 1939, q. v. **Copy seen:** DLC; MH-Z.

36727. PETERSEN, BJÖRN. Die geographische Variation einiger fennoskandischer Lepidopteren. (Zoologiska bidrag från Uppsala, 1947. Bd. 26, p. 329-531, illus., 43 text maps) 190 refs. Text in German. Summary in English (p. 455-59) **Title tr.:** Geographical variation of some Fennoscandian Lepidoptera.

Sixteen Fennoscandian butterflies are studied from the viewpoint of systematics and evolution. Their distribution (text maps 2-17) is treated in the special part of the paper (p. 337-407); their geographic variation shown (maps 18-43); and descriptions of races, their names, racial characteristics, data on ecology and Fennoscandian and total distribution are given. In the general part (p. 408-454) genetics, ecological adaptation to temperature, evolution and the types of geographic variation are discussed. Tables of measurements and ecological data are included (p. 474-531) for each of the investigated species

and its variations. Almost all of the species occur in northern regions of Scandinavia and in Kola Peninsula.

Contains notes on the subjective causes of cold injuries: anemia, TB, malnutrition, vitamin deficiencies, etc. Methods of treatment of first and second degree frostbite are described.

Copy seen: DSG.

36732. PETRI, B. È. Ètnograficheskie issledovaniia sredi malykh narodov v Vostochnykh Saianakh; predvaritel'nye dannye. (Irkutsk. Universitet. Sbornik trudov, 1927. vyp. 12, p. 217-35, tables) Text in Russian. Summary in German. **Title tr.:** Ethnographic investigations among the small peoples of the Eastern Sayan Mts; preliminary data.

Contains description of the field work of two economic-statistical and medico-ethnographic expeditions, headed by the writer in 1925 and 1926, the former to the Karagas, the latter to the Soyots. Each party consisted of three men, one a physician. Extensive economic, ethnographic and medical surveys were made, and statistical data collected. The Karagas and Soyots are two small Samoyedic peoples (416 and 501 individuals respectively), living on the heights of the Eastern Sayan Mts. where the landscape, tundra and taiga with their flora and fauna, has a typical arctic or subarctic character despite the lower latitude (52°-53° N.). Both peoples originally were reindeer breeders; today the Karagas live chiefly from hunting; and the Soyots, besides reindeer breeding, keep cattle and even do a little farming. The transition of hunters and reindeer keepers to cattle breeders goes smoothly; but an attempt to transform the nomads into agriculturists leads to certain extinction for the entire tribe, concludes the author. He outlines a plan of how to save these peoples from such extinction. It is to be noted that domestication of reindeer is considered by some scientists to have originated in the Sayan Mts. **Copy seen:** DLC.

36733. PETRI, B. È. Neuere über die Jakuten. (Petermanns geographische

Mitteilungen, 1887. Bd. 33, p. 102-108) 15 refs. Text in German. **Title tr.:** New data about the Yakuts.

Contains a discussion on conditions among the Yakut people, based on literature of that time (1887), concluding that the Yakuts are not a dying-out people; their number, on the contrary, is increasing and they exercise a considerable cultural influence upon their neighbors, including Russian settlers. Yakut food is described in detail. One of their epics "Ürüng-Uolan" (cf. No. 34962) is translated as a specimen of Yakut creative abilities. Religious beliefs are reviewed and shamanism is stated to be decreasing. **Copy seen:** DLC.

36734. PETRI, B. È. Okhotnich'i ugod'ia i rasselenie karagas. (Irkutsk. Universitet. Sbornik trudov, 1927. t. 13, p. 335-64, 5 text tables, fold. map) Text in Russian. Summary in German, p. 363-64) **Title tr.:** Hunting grounds and settlements of the Karagas.

Contains a sketch of the demography and economy of this small group of Samoyedic people, about 400 individuals in 1927, living on the northern slopes of the Sayan Mts. (about 53°-56° N. 65°-71° E.). Vital statistics are given from 1838; the three groups (eastern, western and a sub-group on the Gutara River) and five clans are located. Social organization is sketched: each of the five clans is divided into several sibs (*aimak*), and a sib consists of individual families. The economic unit is a patri-archal and exogamous family. The territory or hunting grounds is property of a clan or sib and not of an individual family. The property and inheritance rules of this system of communal land ownership are outlined. The economy is based chiefly on hunting; Buryats and Russians are gradually depriving the Karagas of their territory and pushing them into the Sayan Mts.

Copy seen: DLC.

36735. PETRI, B. È. Olenevodstvo u karagas. (Irkutsk. Universitet. Biologo-geograficheskii institut. Izvestiia, 1927. t. 3, vyp. 2, p. 23-44, illus., tables) Text in Russian. **Title tr.:** Reindeer breeding among the Karagas.

Monograph based on material collected during the Karagas expedition of 1925. Reindeer breeding is a typical feature of the life of the Samoyedic Karagas, living in the taiga of the eastern Sayan Mts. An extensive survey was made of

the physical characteristics and biology of the race of Karagas reindeer; saddling and taming, training as draft animals, pastures, products (hides, hair, meat and milk); age of the reindeer and its slaughter, diseases, development and depletion of the herd. Statistical data are given (the number decreased 47.4 percent since 1914). The importance of the reindeer in the Karagas economy is discussed. Notes on it (and the horse) in cult, and a legend on the origin of its domestication are included. The Karagas also keep a few horses and use them as draft animals, but the reindeer is never harnessed. Illustrated by drawings of Karagas school children.

Copy seen: DLC.

36736. PETRI, B. È. Proekt kul'tbazy dliã malykh narodov Sibiri. (Sibirskii kraevoi nauchno-issledovatel'skii s'ezd. 1st, *Novosibirsk*, 1926. Trudy, 1928. t. 5, p. 118-27) Text in Russian. **Title tr.:** A project of cultural bases for the small nationalities of Siberia.

Contains discussion of the problem of how to bring the small backward peoples into the process of modern civilization. A net of cultural bases is suggested; they should be organized by the Committee of the North, and well located; they should serve as administrative and educational centers, with such institutions as schools, medical, veterinary and trading posts. Cultural bases should gradually accustom the nomads to the settled mode of life.

Copy seen: DLC.

36737. PETRI, B. È. Promysly karagas. (Vsesoiuznoe geograficheskoe obshchestvo. Vostochno-Sibirskii otdel. Izvestiia, 1928. t. 53, p. 35-69, 8 tables) Text in Russian. **Title tr.:** The Karagas hunting industry.

Contains a survey of hunting as the principal occupation of this Samoyedic tribe, "sons of the forests," living on the slopes of the Sayan Mts.; it is based on material collected by the author in 1925 during the Karagas expedition, organized by the Russian Red Cross and Local Committee of the North in Irkutsk. The gods and spirits who aid man in hunting (and reindeer breeding), the most important fur bearers, the breeding of hunting dogs, firearms and ammunition, and profits are described. Hunting today (1928) takes first place in the Karagas economy, formerly dominated by reindeer breeding. In 1925 there were 96 hunting families. Boys and even girls start hunting at about 12 years of age.

A good hunter goes alone in the taiga, less experienced ones form an artel. Secondary occupations are: fishing, fowling, digging edible roots (*sarany*), gathering nuts, etc. Statistics of production in 1924-1925 are given.

Copy seen: DGS.

36738. PETRI, B. È. Sibirskii neolit. (Irkutsk. Universitet. Biologo-geograficheskii institut. Izvestiia, 1926. t. 3, vyp. 1, p. 39-75, table) 32 refs. Text in Russian. **Title tr.:** The Siberian neolithic.

Contains a characterization of archaeological objects of the neolithic period found in Siberia: artifacts of stone and bone, ceramics, sites and remnants of dwellings, pictorial art, cult objects, etc., are considered. A reconstruction of the mode of life, the transition to the bronze age, and a scheme of periodization within the neolithic are attempted. Archeology of the Baykal and Angara regions is extensively discussed; notes are included on the neolithic of the far North, discovered at Dudinka (69° N.), Ob' River delta (66° N.), on the Sos'va River (63° N.), in the District of Berezovo, and at the village of Samarovo (60° N.).

Trudy, 1928. t. 5, p. 113-17) Text in Russian. **Title tr.:** Objectives in the further study of Siberian natives and a method of investigation of entire nationalities.

From author's point of view, studies in ethnography of a certain people should start with their material culture and economy, determined by the physical-geographic conditions of the country; social organization is merely a function of the economic life, cult is a product of the material culture and social organization, and folklore is the final expression of all the previously mentioned factors. More effort, therefore, must be given to learning the native economy, and collecting statistical data: this work must be done quickly, because radical changes are about to take place as result of industrialization and new planning. An expedition of this type to investigate the tribe as a whole, and not merely a few selected settlements, is outlined.

National Museum, Washington, D. C., 1954. p. 203-356, fig. 26-39, table. (U. S. National Museum. Proceedings, no. 3324) 200 refs.

Contains a study of material collected during 1948-50 by G. E. MacGinitie of the Arctic Research Laboratory. Eighty-eight species and 26 families are described, with notes on synonymy, keys to families, genera and species, geographic distribution, frequency, etc. Some limited material from earlier collections was also utilized in this monograph. **Copy seen:** DSI-M.

36746. PÉWÉ, TROY LEWIS, 1918- . Brief review of Quaternary events in Alaska. (Geological Society of America. Bulletin, Dec. 1954. v. 65, no. 12, pt. 2, p. 1293-94)

Discusses pre-Wisconsin and Wisconsin glaciations of Alaska and the loess blankets and associated vertebrate-bearing muck deposits of Wisconsin time, with warm period interval, in relatively ice-free central Alaska.

Copy seen: DLC.

36747. PÉWÉ, TROY LEWIS, 1918- . Effect of permafrost on cultivated fields, Fairbanks area, Alaska. Washington, D. C., U. S. Govt. Print. Off., 1954. p. 315-51. 11 illus., text map., diagraphs, 2 tables. (U. S. Geological Survey. Bulletin 989-F) 42 refs.

Destructive effects of permafrost on cultivated fields result chiefly from thawing of large masses of clear ice in the frozen ground. Three physiographic units in the region are recognized: (a) Chena and Tanana River flood plains (50 percent of the area); (b) alluvial fans, colluvial slopes, and silt lowland (27 percent); (c) loess-covered hills and south-facing slopes primarily in the northern part (23 percent). In a, soil drainage and temperature are affected by permafrost for a few years after clearing, but no mounds or pits are formed due to lack of ground ice. Large ground ice masses which are thawed by removal of vegetation, characterize b; formation of thermo-karst mounds and pits is described in some detail. In c, permafrost is absent. Most suitable land in a and c has been claimed; cultivation in

b requires repeated, costly, and time-consuming grading. **Copy seen:** DGS.

36748. PÉWÉ, TROY LEWIS, 1918- . Evidence for possible marine Tertiary (?) sediments in central Alaska. (American Association of Petroleum Geologists. Bulletin, Oct. 1954. v. 38, no. 10, p. 2222-25) 8 refs.

Five transported marine Tertiary (?) pelecypods were found in 1946 and 1952 in early Quaternary auriferous stream gravel ten miles west of Fairbanks. They may indicate a marine embayment which extended into central Alaska during Tertiary (?) time. Fossils are described and the known Tertiary continental deposits in central Alaska are located and briefly discussed. Marine sediments may be preserved beneath Quaternary sediments in the Tanana River lowland. **Copy seen:** DGS.

36748A. PFUND, AUGUST HERMAN, 1879-1949. Twilight-sextant and sky polarization. Johns Hopkins University, Physics Dept. Baltimore, Md., 1948. 19 p. 11 fig. (plates). Mimeographed.

"Report (complete) covering work done under Contract NOa (s) 9279 between the Bureau of Aeronautics and the University."

Description of the development, theory and prototype of the Pfund twilight-sextant or sky compass for navigational use in polar regions. The azimuth and altitude of the sun may be determined to an accuracy of about 1° from sky-polarization observations. The degree of polarization is high within the 10° zone from which the polar navigator receives sky light. A separate device was constructed to handle the feebleness of sky light after sunset. No results were obtained with this device. The desirability of comparing after-sunset determinations of the sun's position with the true solar position as calculated by an astronomer is indicated.

36752. PHILLIPS, THOMAS RAPHAEL In air defense, geography is on our side. (Army combat forces journal, Jan. 1955. v. 5, no. 6, p. 11-15, illus. 2 text maps)

Contains discussion of the defensive and offensive superiority of the U.S. over

the U.S.S.R. against air attack, due to geographical configuration. No Soviet target is more than 3,000 miles distant from some one of the U.S. peripheral bases, and U.S. aircraft can enter the Soviet Union at any point on its 14,000-mile perimeter. All Soviet bases are more than 3,000 miles from U.S. targets, with the exception of Uelen (66°10' N. 169°50' W.) across the Bering Strait on the Chukotsk Peninsula; this is probably not suitable as a base however, due to its proximity to U.S. radar and air bases. North Pole approaches are not favorable for Soviet attack due to their great distance and geographical situation being flanked by friendly land areas at strategic points. The feasibility of building interceptor bases in northern Canada is negated.

Copy seen: DLC.

36753. PHYSICS TODAY. Air Force geophysical research. (Physics today, Feb. 1953. v. 6, no. 2, p. 10-13, 6 illus.)

Includes brief description of the Arctic research program of the Terrestrial Sciences Laboratory (Geophysics Research Directorate, Air Force Cambridge Research Center). Ice Island T-3 is being occupied for data on its physical properties, formation, composition and motion; the dynamics of the ice pack and glaciers of the Arctic Ocean are being studied. Seismic profiling from TNT explosions determines thickness and other physical properties of ice. Determination of extent and causes of ice drift, and age determination by carbon-14 analyses of ice or of bottom samples are part of the program.

Contains a report on establishment and extinction of conditioned withdrawal responses in a snail. "At 8° C., extinction was accomplished in 12.0 trials; at 16° C., 8.6 trials were required; and at 26° C., 4.5 trials were necessary. In a second extinction series 10 minutes later, extinction was reestablished with 83 percent, 57 percent and 20 percent savings for the 8° C., 16° C., and the 26° C. groups respectively. The results are similar for two parallel groups."—*Psychological abstracts*, 1946. v. 20, p. 328.

36761. PIHLAINEN, JOHN A. The National Research Council's Permafrost Research Station at Norman Wells. (Arctic circular, Nov. 1953. v. 6, no. 5, p. 55-56)

The station was established during summer 1952, and will ultimately investigate all northern building problems. In 1953 the staff of three occupied one prefabricated building; the other contained a soil mechanics laboratory, work shop, and office. The field season is June-Sept.; winter work is done in Ottawa. Winter projects at Norman

Wells are planned for the future. Present study is concerned mainly with development of site selection methods, and compilation of design data on building foundations in permafrost areas.

36762. PIHLAINEN, JOHN A., and G. H. JOHNSTON. Permafrost investigations at Aklavik: 1953 drilling and sampling. Ottawa, Jan. 1954. 26, 10, 2, 9 p. illus., diagrs., graphs, 3 tables. Mimeographed. (National Research Council of Canada. Division of Building Research. Technical paper, no. 16. NRC no. 3393) 8 refs.

Contains record of investigations carried out as part of a program sponsored by the Division of Building Research and the Dept. of Northern Affairs and National Resources. Construction of two large buildings offered opportunity to try out soil sampling techniques and initiate observations on effects of buildings on permafrost. Full details of drilling in permafrost and its difficulties are presented (with diagrams of drill rig): drilling operations, frozen core investigations and sampling, and thermocouple investigations. Results of soil testing and description of Aklavik soils are given. Appended are: photographs and descriptions of typical frozen cores; note on the statistical analysis of Aklavik moisture contents with depth; also methods of describing and classifying frozen soils, as proposed by the Frost Effects Laboratory, Corps of Engineers, U. S. Army, New England Division, Boston, Mass., June 1951.

Contains brief discussion of problems of construction in permafrost and the initiation of a permanent program of research in 1950. Expeditions to the Northwest Territories were sponsored by the Division of Building Research (National Research Council of Canada) and other government agencies in summer 1950 and 1951, and a Permafrost Research Station was established at Norman Wells (Mackenzie District, 65°17' N. 126°51' W.) in 1952. Conclusions from the two expeditions, projects of the

Research Station, and specific problems for future research are noted.

Bülleten', 1946. no. 13, p. 6-9) Text in Russian. **Title tr.:** Activity of the Kamchatka Volcanological Station of the Academy of Sciences of the U. S. S. R. in 1944.

All observation work and all trips were carried out by the author as the station's sole scientific worker in 1944. All volcanoes were quiescent; eruptions of Klyuchevskiy and Shiveluch which began in December and continued in 1945 will be described in the 1945 report. Two trips were made: (1) to the Karaga River basin, where the absence of volcanoes was confirmed, and the Dranka River hot springs visited; and (2) to the Klyuchevskaya group of volcanoes in July-Aug. The general geological features of Ploskiy Tolbachik, Bol'shaya i Malaya Udina, Bol'shaya i Malaya Zimina Sopka and Bezmyannaya volcanoes were studied; and the hanging glaciers of Klyuchevskiy Volcano were observed.

36766. PIIP, B. I. Deätel'nost' vulkanov Klüchevskoi gruppy s dekabriä 1940 po mai 1941 g. (Akademiia nauk SSSR. Kamchatskaia vulkanologicheskaiia stantsiia. Bülleten', 1946. no. 12, p. 74-78, illus.) 2 refs. Text in Russian. **Title tr.:** Activity of volcanoes of the Klyuchevskaya Group, Dec. 1940-May 1941.

Notes on the activity of Klyuchevskiy Volcano with its lateral craters Bilyukay, Tiranus, Tretiy and Kozey, and of Ploskiy Tolbachik, based on the author's observations from the Volcanological

Station in the village of Klyuchi, and during his trip to Bilyukay in Feb. 1941, also on I. G. Chernov's observations from the village of Kozyrevsk in vicinity of Tolbachik. The activity of all the volcanoes was weak, and limited to ejection of vapors. The formation (probable) of a lateral crater in Tolbachik on May 7, and a weak earthquake on Feb. 8, 1941 are reported.

36767. PIĬP, B. I. Novyi pobochnyi krater vulkana Tolbachik. (Akademiia nauk SSSR. Kamchatskaia vulkanologicheskaiia stanitsiia. Būlleten', 1946. no. 13, p. 10-21, illus., plan) 4 refs. Text in Russian. **Title tr.:** A new lateral crater of Tolbachik Volcano.

After a long period of quiescence, (Ploskiy) Tolbachik began to erupt quietly in Sept. 1939 and continued so for a year and a half. The explosive eruption of May 7-14, 1941 began with the opening of a new, lateral crater on the southern slope, which the author investigated two months later. That eruption and crater are described; its cone, the products of the explosion (fragments of lava, volcanic bombs, lava sheets), two lava streams 5 km. long, fumaroles and their vapors. The ejected matter is estimated as 10-12 million cu. m. of fragments, and 14.4 million cu. m. of lava. Plan in scale 1:30,000 (p. 12) shows new crater, lava streams and location of fumaroles.

Copy seen: DLC.

36768. PIĬP, B. I. O raskalennykh agglomeratovykh potokakh Avachi i o tipe izverzhenii etogo vulkana. (Akademiia nauk SSSR. Kamchatskaia vulkanologicheskaiia stanitsiia. Būlleten', 1946. no. 12, p. 18-28, illus., diagr.) 17 refs. Text in Russian. **Title tr.:** On streams of burning-hot agglomerates of Avacha and on type of eruptions of this volcano.

The eruption of Avacha Volcano in 1938 (and probably those of 1895, 1901, 1905 and 1926), was characterized by the ejection of a great quantity of loose agglomerates of stone, sand and ash. This type of eruption has been observed in other volcanoes; Soufrière (1902), Mont Pelée (Martinique, 1902), Merapi (Java, 1920 and 1930); and a comparison indicates that this type eruption from Avacha takes place between the normal one with discharge of molten lava, and that in which agglomerates of burning-

hot but solid rock fragments and hardened lava are erupted. **Copy seen:** DLC.

36769. PIĬP, B. I. Sostoianie aktivnykh vulkanov Kamchatki s iūnna 1941 g. po aprel' 1943 g. (Akademiia nauk SSSR. Kamchatskaia vulkanologicheskaiia stanitsiia, Būlleten', 1946. no. 13, p. 3-5, illus.) 3 refs. Text in Russian. **Title tr.:** State of the active volcanoes in Kamchatka from June 1941 to April 1943.

Volcanoes Shiveluch and Klyuchevskiy were kept under systematic observation from the village of Klyuchi, (Ploskiy) Tolbachik and Kizimen from Tolbachik village, and Avachinskiy and Mutnovskiy from Petropavlovsk; trips were made to the summit of Klyuchevskiy (unsuccessfully) and to the new lateral crater of Tolbachik. The number of days visible, and the signs of activity are reported for each volcano. Only Tolbachik was in eruption; all others were inactive, or merely ejected vapors from crater or fumaroles, and ashes (Shiveluch) Five feeble earthquakes of II-IV degree of intensity, and stronger one in northern Kamchatka on Mar. 7, 1943, are noted.

"Examination of 237 whales caught off the northwest coast of Vancouver Island, British Columbia, during the summer of 1950 revealed characteristic oval-shaped scars similar to those found on whales from other parts of the world. Some of these scars plainly show tooth marks which demonstrate that they were made by parasitic lampreys. Scars made by *Entosphenus tridentatus* were found on finback, humpback, sei, and sperm whales. Open pits in the blubber are interpreted as healing stages which succeed the lamprey attacks." Author's abstract.

Summary of a report to the Main Geophysical Observatory. In the winters 1928-29 and 1929-30, the Bolshoy Lyakhovskiy Island polar station carried out observations on the amount of hoar frost, rime, and ice-coating on the ground and found it to be a significant part of the total snow cover in that area. In the period Oct. 14-Dec. 14, these deposits were 2,263 cu. cm. per sq. m. of surface, while the atmospheric precipitation (snow, etc.) was only 2,100 cu. cm. The apparatus used for observation is described and need of further studies stressed.

36791. PLAFKER, GEORGE, 1929- . Geologic investigations of proposed power sites at Cooper, Grant, Ptarmigan, and Crescent Lakes, Alaska. Washington, D. C., 1954. 38 p. 5 maps (4 fold.), table. (U. S. Geological Survey. Reports, open file series, no. 294) 4 refs.

Four sites in the Kenai Mts. (approx. 61°20'-30' N. 150°-150°30' W.), north and northwest of Seward, were studied Aug. 14-Sept. 8, 1952, as part of the U. S. Geological Survey program of investigating potential hydro-electric power sites in Alaska. The geography, water-power development, and geology of the region are outlined. Information given for each of the four sites includes: topographic description of the reservoir site, bedrock and surficial geology of the dam and tunnel sites, conclusions and recommendations for construction.

36792. PLANCK, CHARLES E. Ageless veteran. (Aero digest, Apr. 1954. v. 68, no. 4, p. 56, illus.)

Contains brief account of a 25-year old Boeing transport plane (80) owned by Reeve Aleutian Airways, which still flies heavy equipment (up to 11,000 pounds) in Alaska. The aircraft is unaltered except for a steel girder under the frame to enable carrying of heavy loads, and a modified door. Three Hornets, 525 hp. each, power the aircraft.

36794. PLISCHKE, HANS. Eine Vorschlagung von Eskimo nach Holland aus dem Jahre 1577. (Petermanns geographische Mitteilungen, Juni 1921. Bd. 67, p. 125) Text in German. **Title tr.:** Eskimos swept away to Holland in 1577.

Contains account of a Greenlandic family of three in two kayaks driven by a storm across the sea to the Netherlands coast in 1577. Two oil paintings were made of them, the man Calitgoch, his wife Egnoeth, and their child, Nutioeth. The pictures have disappeared, but one of the kayaks with frame of "fish bone" is preserved at the Ethnographic Museum of Munich. The adventure is traced from two documents, dated 1689 and

1776, in possession of the War Archives in Munich.

36795. PLOTNIKOV, A. F. Narymskiĭ kraĭ; istoriko-statisticheskiĭ ocherk. Peterburg, 1901. 11, 366, 17 p., tables, fold. map, 22 refs. (Vsesoiŭznoe geograficheskoe obshchestvo. Otdelenie statistiki. Zapiski, t. 10, vyp. 1) Text in Russian. **Title tr.:** The district of Narym; an historical-statistical sketch.

A monograph on the natural conditions, history, population and economy of this large and rather inaccessible region of the former Govn. of Tomsk, some 200,000 sq. versts in area, between 58°-61° N. 120°-133° E. The population of 17,800 in 1899, included about 3,000 natives, mostly Ostyaks and Ostyak-Samoyeds of whom the writer, who was the sole representative of the Russian administration in Narym for four years, gives an extensive description: their history since contact with Russians, conquest, revolts, native princes, former and present social organization, their clothing, adjustment to the harsh climate, food and health conditions, family life, religious beliefs, funeral customs, introduction of Christianity, present-day superstitions and customs; language, names of relationship; occupation, especially fishing; the life cycle, particularly wedding ceremonial. Acculturation, exploitation and dying-out of the natives, famines, taxes (*iasak*) and other administrative measures, also education and schools, are noted, and statistical data included over the period 1805-1899. The status of the Russian settlers, and their relations with the natives are also treated in detail; history of the Russian colonization since the foundation in 1598 of the stronghold of Narym, its trade and fairs, exports; the Russians' animal breeding, their fishing and hunting trade, poultry farming, bee keeping, gathering activities: berries, mushrooms, nuts, etc. An historical-statistical survey is included of 24 native and 13 Russian communities (*volost*), with tabular data on population, occupations and property (number of houses, domestic animals, etc.) Supplement (17 p.) gives statistics on the population and economy for 1899.

36797. POAGE, W. C. The dropsonde record from Alaska to the North Pole, April 1950-April 1952. Los Angeles, June 1954. 52 p. graphs, cross-sections, 2 tables. Mimeographed. (California. University. Dept. of Meteorology. [Arctic Meteorological Research]. Scientific report, no. 2. Contract AF 19(122)-228) 8 refs.

Second in a series of seven reports from the U. C. L. A. Arctic Project, initiated Oct. 1950 and directed by J. Bjerknes. A summary and evaluation are presented of the first two years of dropsonde data collected during U. S. Air Force "Ptarmigan" flights over the Arctic Basin. Data give temperature and pressure only. Flights were made at the 500-mb. level and ranged between 140° W. and 170° E. Data are compared with records from Point Barrow (northern Alaska) and Alert (northern Ellesmere), also with soundings made by Sverdrup on the Norwegian Polar Expedition in the *Maud*. Inversions over the arctic ice are discussed in detail and related to Sverdrup's findings. Mean cross-sections from the Pole to Anchorage, Alaska, are presented.

36800. PODGORBUNSKIĬ, V. I. Voprosy arkhеologicheskikh izyskanii v predelakh Pribalkal'ia i prilеganiishchikh k nemu raionov. (Sibirskii kraevoi nauchno-issledovatel'skii s"ezd. 1st, Novosibirsk, 1926. Trudy, 1928. t. 5, p. 226-36) Text in Russian. **Title tr.:** Problems of archeological research in Pribaykal'ye and adjacent districts.

Contains brief review of archeological research in more recent times. Several apparent paleolithic sites were discovered near Irkutsk, on the Ushakova and Angara Rivers and at the Verkholenskaya Gora, with stone and bone artifacts; their dating, however, is uncertain (transition period between the paleolithic and neolithic?). Neolithic sites were discovered in the Baykal region, and in the basins of the Selenga, Angara, Ilim, Lena, Aldan and Vilyuy. They are of three cultural types; the skulls found, according to G. F. Debets, belong to two racial types: one, mesocephalic, similar to Paleo-Siberians, the other, dolichocephalic, is rather close to the skulls of some Tungus groups and of Ostyak-Voguls. Several neolithic artifacts show affinities with the recent stone industry of Paleo-Siberians. Characteristics of the bronze and iron ages in Siberia are given, with references to Chinese and Mongol chronicles. The Pribaykal'ye region was inhabited by Tungus and Turcic tribes at the time of the Russian conquest. The Yakuts, whose culture is of southern origin, came to this region in the early iron age; they were familiar with artifacts of bronze and tin, and their ornaments have similarities with Finno-Ugric or Chud patterns found in northern European Russia. The iron age of Pribaykal'ye shows affinities with Chinese.

36806. POKROVSKAĬA, TAIŠIĬA VASIL'EVNA, 1900- Osadki kholodnykh zim. (Leningrad. Glavnaia geofizicheskaiia observatoriia. Trudy, 1938, vyp. 16, p. 3-15, diagrs., tables, maps) Text in Russian. Summary in German. *Title tr.:* Precipitation of cold winters.

In the 50-year period 1881-1930, in 12 winters during which 14 periods have uninterruptedly negative mean daily temperatures for at least 60 days, two basic and one transitional type of winter precipitation distribution are established for the European part of U. S. S. R. In the northern and arctic sections of this area, precipitation amounts are considerably below normal in the winters when the southeast section has the maximum of very cold days (mean temperature of -15°C . or lower). When the maximum number of such days occur in the northern or northeastern sections, precipitation amounts are near or above normal.

36812. POLAR RECORD. Canadian Department of Mines and Technical Surveys Geographical Branch. (Polar record, July 1954. v. 7, no. 48, p. 195-96) 2 refs.

The Geographical Branch was founded June 5, 1947 as the Geographical Bureau of the Dept. of Mines and Resources, assuming its present title in Jan. 1950. Its purpose, duties, and some of its publications are noted. Geographical studies of arctic and sub-arctic Canada are stressed. Important projects include the Canadian Ice Distribution Survey and a study of the physical geography of Canada north of 60° N.

Copy seen: CaMAI; DLC.

36813. POLAR RECORD. Canadian Eastern Arctic Patrol 1951. (Polar record Jan. 1954. v. 7 no. 47 p. 42-44)

Contains chronological account of the patrol carried out by the Canadian Government ship *C. D. Howe* June 27-Sept. 28 1951, during which 5200 short tons of government stores were transported to 35 settlements. Officials on board are listed. The vessel visited localities in Labrador, Ungava Bay, Hudson Strait, Hudson Bay, Southampton, Baffin, Devon, and southern Ellesmere Islands. The RCMP post at Craig Harbour, Ellesmere Island, closed since 1940, was officially reopened. Additional cargo was carried by the ice-

breaker *N. B. McLean* which visited posts in Labrador, Hudson Strait, and Hudson Bay. Activities in the Canadian Western Arctic are briefly noted.

36819. POLAR RECORD. Charlie McGonagle [1870-1953]. (Polar record, July 1954. v. 7, no. 48, p. 234)

Contains obituary of the Alaskan miner who with three companions climbed the northern peak of Mt. McKinley in Apr. 1910.

Copy seen: CaMAI; DLC.

36820. POLAR RECORD. Coal-mining in Svalbard, 1945-51. (Polar record, Jan. 1954. v. 7, no. 47, p. 64-66, table) ref.

Prior to evacuation of Svalbard Aug. 1941, coal was being mined at one Norwegian and two Soviet properties in Vestspitsbergen. Companies are listed. No coal was produced and much damage done to mines by fire and enemy action during 1942-1944. In 1944-1945 the Norwegians started reconstruction work, Russian miners returned in 1946, and in 1947 all Norwegian mines were in production. Progress to 1949 is noted. Table of production for 1937-41 and 1945-51 shows; total for each year; amount exported by Russians and Norwegians; and number of miners in summer and winter.

36821. POLAR RECORD. Edmund Gilbert Dymond [1901-1953]. (Polar record, July 1954. v. 7, no. 48, p. 233)

Contains obituary of this British physicist who took part in the Wordie Expedition to North West Greenland and the Canadian Arctic in 1937, during which he studied cosmic ray intensity and concentration. He later studied physics of the upper atmosphere and developed and perfected the British radiosonde.

Copy seen: CaMAI; DLC.

36822. POLAR RECORD. Eskimo affairs in Canada, 1952. (Polar record, Jan. 1954. v. 7, no. 47, p. 68-70)

At a conference on Eskimos in Ottawa, May 19-20, 1952, the federal government,

Anglican and Roman Catholic missions, and the Hudson's Bay Co. were represented. This conference and one held Oct. 16, 1952, dealt with the increasing dependence of the Eskimos on government aid, their deterioration in health, and facilities for elementary and higher education in government and church schools. Objects of the Eskimo Research Unit (Dept. of Mines and Resources, Northern Administration and Lands Branch), created Nov. 24, 1952, are cited, and a boat-building project of the Hudson's Bay Co. at Lake Harbour, Baffin Island, is noted.

Copy seen: CaMAI; DLC.

36823. POLAR RECORD. Eskimo scout battalions of the U. S. National Guard. (Polar record, July 1954. v. 7, no. 48, p. 210)

Contains note on First and Second Scout Battalions, formed in 1950 for duty in west and northwest coastal Alaska, with headquarters at Nome and Bethel, respectively. Eskimos up to 35 years old may volunteer. Camps and parades are held in autumn and winter when hunting and fishing make less demand on men's time.

36824. POLAR RECORD. Expeditions of Norsk Polarinstitut to Svalbard, Jan Mayen and East Greenland, 1951 and 1952. (Polar record, Jan. 1954. v. 7, no. 47, p. 44-46) 2 refs.

Hydrographic surveys were made off Jan Mayen, June 30-Aug. 10, 1951, and July 8-Aug. 11, 1952, by a five-man party led by K. Z. Lundquist. In Svalbard annual inspection of lights and beacons was made in both years by Lundquist. Geological observations in Vestspitsbergen were carried out by a four-man party led by H. Major in 1951, and geologic, topographic, glaciological, and astronomical work was done in 1952. Relief expeditions to hunting and weather stations in East Greenland were made in the *Polarbjørn*, July 26-Sept. 9, 1951, and July 25-Sept. 3, 1952. Notes on ice conditions are given.

Copy seen: CaMAI; DLC.

36825. POLAR RECORD. Fibreglas runners for aircraft skis. (Polar record, Jan. 1954. v. 7, no. 47, p. 53)

Skis fitted with laminated runners of woven Fibreglas reinforced with polyester resin are being tested by the De Havilland Aircraft Co. of Canada Ltd.

Ice and slush do not freeze readily on the material, ice can be easily flaked off, the material does not become brittle at low temperatures and glides well on snow and slush. Disadvantages include tendency of laminations to part at edges, and difficulty in attaching material to supporting structure.

Copy seen: CaMAI; DLC.

36826. POLAR RECORD. Fisheries investigations in Ungava Bay and Frobisher Bay, 1950 and 1951. (Polar record, Jan. 1954. v. 7, no. 47, p. 39-40)

Contains note on the voyages of the Canadian research vessel *Calanus*, June-Sept. 1950 and June-Aug. 1951, under the direction of M. J. Dunbar. During 1950 hydrographic and biological surveys were made in Ungava Bay, across Hudson Strait to Lake Harbour on Baffin Island, Port Burwell (Labrador), and the Button Islands (northern Quebec). In 1951, hydrographic stations and soundings were made in Frobisher Bay, Baffin Island, during which Ogak Lake at the head of Ney Harbour was visited. Notes on fish and seals seen are included.

36827. POLAR RECORD. Foreword [Col. Bernt Balchen, U. S. A. F.]. (Polar record, Jan. 1954. v. 7, no. 47, p. 3, port.)

Contains note on Col. Bernt Balchen, U. S. A. F., his transatlantic and South Pole flights with Byrd, 1927 and 1929, his U. S. citizenship by Act of Congress 1929, his command of U. S. Air Force base at Bluie West 8 in West Greenland in World War II, and his post-war association with Scandinavian Airlines System, 10th Air Search and Rescue Squadron in Alaska, and U. S.-Danish Thule air force base in northern Greenland.

Copy seen: CaMAI; DLC.

36828. POLAR RECORD. Frederick Swan Lawrence. (Polar record, Jan. 1954. v. 7, no. 47, p. 85)

Contains obituary of F. S. Lawrence, 1875-1952. His training as a mechanical engineer, his exploratory work and organization of an agricultural experiment station in northern Alberta are noted. He was an advocate of the development of natural resources in northern Canada and strongly supported the establishment of a domesticated reindeer industry. He was unsuccessful in an attempt to carry out this project in Labrador. **Copy seen:** CaMAI; DLC.

36829. POLAR RECORD. French expedition to Greenland, 1951. (Polar record, July 1954. v. 7, no. 48, p. 140-143, text map) 4 refs.

Summary of the final summer's campaign of the expedition initiated by P. -É. Victor in 1948. Personnel of the 23-man party headed by G. Rouillon is listed. It worked in four teams: two seismic, one gravimetric, and that under Rouillon which relieved the wintering party at the central station. Activity and itinerary of each are reported, death of A. Joset and J. Jarl, evacuation of the central station, and return of all expedition members and stores to France.

Copy seen: CaMAI; DLC.

36830. POLAR RECORD. Fritz Klute [1885-1952]. (Polar record, July 1954. v. 7, no. 48, p. 233-34)

Contains obituary of this German geographer who was a member of the Hessische Grönland-expedition, 1927, during which he studied the Nugssuaq peninsula near Disko, West Greenland. He published a study of surface forms in the Arctic (*Arctic Bibliography*, No. 8857) and an important series of geographical text-books.

Copy seen: CaMAI; DLC.

36831. POLAR RECORD. Hans Rudolf Johannes Emil Nielsen. (Polar record, Jan. 1954. v. 7, no. 47, p. 86)

Contains obituary of H. R. J. E. Nielsen, 1898-1951, a native of West Greenland, who became manager of the trading post at Thule at the age of 23. He was transferred to Egedesminde in 1941 and to Godhavn in 1942. His influence over the Eskimos and accomplishments at Thule are noted.

Copy seen: CaMAI; DLC.

36832. POLAR RECORD. Harrie H. Newcomb. (Polar record, Jan. 1954. v. 7, no. 47, p. 86)

Contains obituary of H. H. Newcomb, 1872-1952, veterinarian to the Ziegler Polar Expedition of 1903-1905, which was stranded in 1903 on Zemlya Franz-Iosifa. His experience in the Boer War and World War I is noted.

Copy seen: CaMAI; DLC.

36833. POLAR RECORD. Helicopter flight to Thule, 1953. (Polar record, July 1954. v. 7, no. 48, p. 154)

Contains note on 4,000-mi. flight made by two experimental YH-21 twin-rotored Piasecki helicopters from Florida

to Thule, North Greenland, Aug. 17-Sept. 16. Machines averaged 94 m. p. h. and made 15 landings en route. They will be used by the U. S. Air Force for routine services in northern Greenland. A previous long-range flight by helicopters, Presque Isle to Prestwick July 16-Aug. 1, is also noted.

Copy seen: CaMAI; DLC.

36834. POLAR RECORD. Ice avalanche at Longyearbyen, 1953. (Polar record, July 1954. v. 7 no. 48, p. 188)

Contains note on avalanche from a mountain glacier which killed three persons, injured nine others, and wrecked the hospital and two other buildings at Longyearbyen, Vestspitsbergen, June 11, 1953.

Copy seen: CaMAI; DLC.

36835. POLAR RECORD. International whaling regulations. (Polar record, Jan. 1954. v. 7, no. 47, p. 55-60)

Contains text of regulations in force in 1954. These were drawn up in Washington, D. C., Dec. 1946, and reviewed and amended during the 1st-4th meetings of the International Whaling Commission, 1949-1952. The 18 regulations concern factory ships and land stations, types of whales protected, locations at which whaling may be carried on numbers and size of whales permitted, processing of whales, crew members, and reports by whalers to the Commission. Whaling terminology (names of whales) is given.

Copy seen: CaMAI; DLC.

36836. POLAR RECORD. The Japanese whaling industry. (Polar record, Jan. 1954. v. 7, no. 47, p. 60-62)

Contains brief history of organized Japanese whaling in Japanese coastal waters, Antarctic, and Arctic. In 1936 North Sea Whaling Ltd. (Hokuyo Hogeï Kabushiki Kaisha) was formed to operate in the Bering Sea and Arctic Ocean. In 1937 whale populations and migration routes were studied and in 1940 and 1941 whaling was carried on off Kamchatka and northeast coast of Siberia; 1260 whales were taken. Whaling resumed off Kamchatka in 1952.

Copy seen: CaMAI; DLC.

36837. POLAR RECORD. John Gregers Rosenstand Elbo [1922-1954]. (Polar record, July 1954. v. 7, no. 48. p. 233, port.)

Contains obituary of the former Assistant in Scandinavian Studies at the

Scott Polar Research Institute, Cambridge, England, a specialist in problems of northern Scandinavia, Svalbard, and Greenland. At the time of his death he was studying for research degree in Eskimo philology at Cambridge University. *Copy seen:* CaMAI; DLC.

36838. POLAR RECORD. Joint U. S.-Canadian operation "Noramix II," 1952. (Polar record, July 1954. v. 7, no. 48, p. 148-49)

Contains note on exercise carried out on the Labrador coast at the end of 1952, by a U. S. Navy amphibious task force and a squadron of Royal Canadian Air Force Lancaster aircraft.

Copy seen: CaMAI; DLC.

36839. POLAR RECORD. The joint U. S.-Danish air base at Thule in northwest Greenland. (Polar record, July 1954. v. 7, no. 48, p. 205-206)

Contains summary of construction of the base, Mar. 1951 through 1952; statistics on workmen, stores, equipment, and fuel brought in; facilities available to personnel at the base; distances from Thule to a dozen points in Europe and Asia.

Copy seen: CaMAI; DLC.

36840. POLAR RECORD. Lapp affairs in Finland. (Polar record, Jan. 1954. v. 7, no. 47, p. 74-76) ref.

Contains a summary of a report presented to the Finnish Government, May 11, 1952, by the Commission on Lapp Affairs (Saamelaisasiain komitea). A brief history of the Lapps and effect of Finnish settlement upon them, statistical analysis of the present population, review of living conditions and occupations, note of societies to aid Lapps, are followed by the Commission's recommendations to Government: creation of a Lapp reserve, laws on reindeer, hunting and fishing rights, encouragement of handicrafts, and use of Lappish language, etc.

Copy seen: CaMAI; DLC.

36841. POLAR RECORD. Lennart Bergl f. (Polar record Jan. 1954 v. 7, no. 47, p. 84)

Contains obituary of L. Bergl f 1878-1953, Swedish civil servant and authority on Lapp affairs. He took part in investigation of problems created by Lapp reindeer movements across the Norwegian-Swedish and Swedish-Finnish frontiers 1907-1925 and later helped formulate policy for administration of Swedish Lapps.

Copy seen: CaMAI; DLC.

36842. POLAR RECORD. Leonard Edmondson Drummond. (Polar record, Jan. 1954. v. 7, no. 47, p. 84-85)

Contains obituary of L. E. Drummond, 1880-1953, Canadian mining engineer, and promotor of northern development, who organized the Alberta and Northwest Chamber of Mines. was responsible for organizing supply in Mackenzie District, and for keeping the Canadian Dept. of Resources in touch with northern mining. **Copy seen:** CaMAI; DLC.

36843. POLAR RECORD. Loss of the Danish schooner *Siorak*, 1953. (Polar record, Jan. 1954. v. 7, no. 47, p. 66)

Contains note on loss Feb. 27, 1953, of the *Siorak*, a 100-ton schooner of Grönlands Departmentet. The ship struck a rock near Avigait, West Greenland (approx. 62°10' N. 50° W.). Loss of a cargo vessel of the same ownership, the *G. C. Andrup*, on July 17, 1951, off Norway, is also noted.

Copy seen: CaMAI; DLC.

36844. POLAR RECORD. New industries in northern Norway. (Polar record, Jan. 1954. v. 7, no. 47, p. 77-78)

Contains review of efforts by the Norwegian Government to create new industries and repair damage from World War II in northern Norway. Minerals being produced in 1952 include iron near Kirkenes in eastern Finnmark, sulfur, and copper. Other industries include a fishing equipment factory at Finnsnes in Troms, pelleting plant near Kirkenes, textile mill near Narvik, and nitrate plant on Glomfjorden. The government is planning to improve the fishing industry, agriculture, communications, and technical education, establish more power stations, exploit timber resources, and encourage industrial and shipowning interests to transfer to northern provinces.

Copy seen: CaMAI; DLC.

36845. POLAR RECORD. The Norwegian whaler *Enern*. (Polar record, Jan. 1954. v. 7, no. 47, p. 63)

Contains notes on first diesel-driven whaler launched in Norway. Built by Aktieselskabet Moss Vaerft og Dokk, the ship was launched in Oct. 1952. Details of tonnage, length, breadth engine, etc., are listed. Special features include automatically regulated engine speed in heavy seas and exceptionally large fuel capacity.

Copy seen: CaMAI; DLC.

36846. POLAR RECORD. Petr Petrovich Shirshov [1905-1953]. (Polar record, July 1954. v. 7, no. 48, p. 234)

Contains obituary of this Russian marine biologist who first went to the Soviet Arctic in 1930, was with the *Sibiriatkov* in 1932, the *Cheläuskin* in 1933-34, and Papanin's drifting station "North Pole" in 1937-38. He became director of the Arctic Institute, U. S. S. R., and senior Deputy Head of the Chief Administration of the Northern Sea Route. He founded and directed until his death the Institute of Oceanology of the Academy of Sciences, U. S. S. R.

Copy seen: CaMAI; DLC.

36847. POLAR RECORD. Plans for trans-arctic air routes. (Polar record, July 1954. v. 7, no. 48, p. 207-209, text map)

Contains note on experimental flights made by Scandinavian Airlines System DC-6B aircraft from Los Angeles to Copenhagen, Oslo, Stockholm; two in Nov.-Dec. 1952 via Edmonton and Thule, another Jan. 22, 1954 via Calgary, Edmonton, Churchill, Frobisher, Bluie West 8 (Søndre Strømfjord); also one from Oslo to Tokyo, May 23-25, 1953 via Thule, Anchorage, and Shemya Island (Aleutians). Flights were made prior to regular commercial service. Plans of other companies are noted.

Copy seen: CaMAI; DLC.

36848. POLAR RECORD. Polar research at Dartmouth College, New Hampshire. (Polar record, Jan. 1954. v. 7, no. 47, p. 64)

Contains note on the acquisition by Dartmouth College of V. Stefansson's polar library on Apr. 2, 1953. The library of 25,000 books, 20,000 pamphlets and many manuscripts will be used in the program of northern studies directed by R. A. McKennan.

Copy seen: CaMAI; DLC.

36849. POLAR RECORD. Professor Wilhelm Meinardus. (Polar record, Jan. 1954. v. 7, no. 47, p. 85-86)

Contains obituary of W. Meinardus, 1867-1952, German geographer and climatologist. His detailed meteorological reports for the Deutsche Südpolar Expedition 1901-1903, comprehensive Antarctic climatology *Klimakunde der Antarktis* (1938), and publication on arctic soils, *Arktische Böden* (Arctic Bibliography, No. 11189) are noted.

Copy seen: CaMAI; DLC.

36850. POLAR RECORD. Properties of metals at low temperatures. (Polar record, July 1954. v. 7, no. 48, p. 189-93) 3 refs.

Based on *Arctic Bibliography*, No. 26644. Low temperature effects on the following are briefly described: aluminum, ferrous, and magnesium alloys, copper and copper alloys, nickel and nickel-rich alloys, zinc, tin, and lead. The study shows that no basis exists as yet for establishment of a satisfactory theory concerning the physical mechanism caused by temperature variations.

Copy seen: CaMAI; DLC.

36851. POLAR RECORD. Ralph James Summers [1892-1950]. (Polar record, July 1954. v. 7, no. 48, p. 234-35)

Contains obituary of this Hudson's Bay Company ship's captain. In Canadian waters from 1921, he commanded the *Fort James* 1934-1935, the *Fort Ross* 1935-1949, and the *Fort Hearne* 1949-1950.

Copy seen: CaMAI; DLC.

36852. POLAR RECORD. Richard S. E. Bøgvad. (Polar record, Jan. 1954. v. 7, no. 47, p. 84)

Contains obituary of R. Bøgvad, 1897-1952, Danish geologist and mineralogist in Greenland, a member of the 7th Thule Expedition in 1932-1933, and later mineralogist to Øresunds Chemiske Fabrikker. He worked mainly in the Ivigtut area, studying the cryolite deposits and general geology.

Copy seen: CaMAI; DLC.

36853. POLAR RECORD. The Right Reverend Archibald Lang Fleming. (Polar record, Jan. 1954. v. 7, no. 47, p. 85)

Contains obituary of A. L. Fleming, 1883-1953, since 1933 first Anglican Bishop of the Arctic. He visited Baffin Island in 1909, became Archdeacon of the Arctic 1926; traveling widely by ship and aircraft until 1949, he established missions, residential schools, and hospitals.

Copy seen: CaMAI; DLC.

36854. POLAR RECORD. The Soviet whaling industry. (Polar record, July 1954. v. 7, no. 48, p. 198-99) ref.

Contains note on history of arctic whaling from 18th century to 1951, and data on recent production: 2583 whales, taken off Kamchatka and the Kuril Islands in 1951, yielded 72,712 barrels of oil; operations in the Antarctic started in 1946, and the 1951-52 catch was

2,468 whales, yielding 147,647 barrels of oil. In 1951-52 total Soviet catch reached 8.3 percent of world production.

Copy seen: CaMAI; DLC.

36855. POLAR RECORD. Treatment of frostbite. (Polar record, Jan. 1954. v. 7, no. 47, p. 51-52) 4 refs.

Contains notes on recent research in frostbite therapy by H. B. Shumacker, q. v., at Indiana University, and by the Royal Victoria Hospital, Montreal, indicating the advantages of quick re-warming methods. The problems of anticoagulants, anti-histaminic drugs, etc., are also touched.

Copy seen: DLC.

36856. POLAR RECORD. Visit to Axel Heiberg Island, Northwest Territories, 1953. (Polar record, July 1954. v. 7, no. 48, p. 153-54)

Contains note on flight made by a five-man party from three Canadian Government agencies and the Tower Engineering Co., July 27-Aug. 11, to investigate possible occurrence of pitchblende. Large deposits of lignite and gypsum were found, but no pitchblende.

Copy seen: CaMAI; DLC.

36857. POLAR RECORD. Vladimir Ivanovich Voronin. (Polar record, Jan. 1954. v. 7, no. 47, p. 86-87)

Contains obituary of V. I. Voronin, Soviet ice-breaker captain, who commanded the *Sedov* in the search for Noble 1928, and expeditions to Zemlya Frantsa-Iosifa and Severnaya Zemlya; in 1932 the *Sibiriakov*, first vessel to traverse the Northern Sea Route in one season, and later the *Cheluskin*, *Ermak*, *Stalin*, and *Slava*.

Copy seen: CaMAI; DLC.

36858. POLAR RECORD. Walter Ravenhill Brown Battle. (Polar record, Jan. 1954. v. 7, no. 47, p. 84)

Contains obituary of W. R. B. Battle, glaciologist and geomorphologist, 1919-1953. Notes his expedition to East Greenland, 1948, research at Cambridge University on cirque formation, and further studies at McGill University, 1952. His death occurred on Cumberland Peninsula, Baffin Island, during the 1953 expedition of the Arctic Institute of North America.

Copy seen: CaMAI; DLC.

36859. POLAR RECORD. Weights of whales. (Polar record, Jan. 1954. v. 7, no. 47, p. 54-55) 3 refs.

Contains notes on whales taken by Japanese whalers in the North Pacific and Southern Oceans, 1947-1949, and by Soviet whalers in the Bering Sea, 1933 and 1936. Lengths (feet and meters) and weights (metric tons) are given for sperm, sei, blue, fin, humpback, and gray whales taken.

Copy seen: CaMAI; DLC.

36860. POLAR RECORD. William Noble Croft. (Polar record, Jan. 1954. v. 7, no. 47, p. 84)

Contains obituary of W. N. Croft, 1915-1953, paleontologist on the staff of the British Museum (Natural History). He visited Svalbard in 1939 with the Swedish - Norwegian - British paleontological expedition and served as geologist in the Antarctic, 1946-1947.

Copy seen: CaMAI; DLC.

36861. POLATYŃSKA-WĘCŁAWOWICZ, J. Wpływ obniżonej temperatury na poziom Kwasu mlekowego we krwi. (Przegląd lekarski, 1954. rok 10, no. 2, p. 76-77, tables) 7 refs. Text in Polish. **Title tr.:** The effect of lowered temperature on the lactic acid level in the blood.

Contains determinations of lactic acid in rabbits kept for 18 hrs. in the open (temperature 5° C. to -5° C.) compared with controls kept at about 15° C.

36862. POLIAŃSKIĬ, IURII IVANOVICH. Dal'nelshie nabljudeniia nad kholodoustoiichivost'iu nekotorykh massovykh vidov litoral'nykh bespozvonochnykh. (Akademiia nauk SSSR. Zoologicheskii institut. Trudy, 1953. t. 13, p. 190-206, tables) 25 refs. Text in Russian. **Title tr.:** Further observations on the cold resistance of some mass species of littoral invertebrates.

Contains the results of observations made in 1950-51 at the Murmansk Biological Station. The cold-hardiness of *Balanus balanoides*, *Mytilus edulis*, *Cyamium minutum*, *Actinia equina* and some other invertebrates is shown (tables 1-7). Almost all mass littoral species have a high, but different, degree of cold resistance, which apparently depends on

their life conditions during the winter. The capacity to withstand low temperature is an important biological adaptation of littoral invertebrates of northern seas. The specialization of organisms has no influence on the cold resistance.

36864. POLLAK, LEO WENZEL, 1888- , and P. G. TEDDE. On the frequency of cyclones over the North Atlantic related to the sunspot cycle. (Archiv für Meteorologie, Geophysik und Bioklimatologie, 1951. Bd. 4, p. 98-111, 5 text maps, 2 graphs, 5 tables) 8 refs.

The North Atlantic Ocean and adjacent coasts between 0°-70° N. and 0°-90° W. are included. Methods for plotting cyclone frequencies are described in some detail. Among results found were considerable differences in cyclonic frequencies at maximum and minimum solar activity in the Greenland region. This might indicate that the frequency of cyclone centers west of Greenland and in West Greenland (approx. 60°-65° N.) is considerably smaller during maximum solar activity than during minimum, while the opposite occurs north of 65° N. lat.

36867. POLUNIN, NICHOLAS VLADIMIR, 1909- . The real Arctic. (In: International Botanical Congress. 7th, Stockholm, 1950. Proceedings, pub. 1953. p. 611-12)

The southern boundary of the Arctic is defined in terms of vegetation and climate. Ten major east-west regional sections are delimited, and three north-south vegetation zones, low, middle, and high-arctic, are briefly described. About 900 species belonging to 224 genera in 63 families are known so far in the Arctic thus defined. **Copy seen:** DGS.

36868. POLUNIN, NICHOLAS VLADIMIR, 1909- . The real Arctic and its Pteridophyta. (American fern journal, Apr.-June 1951. v. 41, no. 2, p. 33-46, text map) 13 refs.

Delimitation of the Arctic as a region in ten sectors ranging eastward from Western Europe to East Greenland is presented, together with an annotated list of 35 species of ferns with data on their distribution in these sectors. In introductory notes the writer deplors "the lack of precision in our conception of what the Arctic really is, and the lack of standardization and consistency in

the use of the very common and necessary adjective form of the word."

36869. POLUNIN, NICHOLAS VLADIMIR, 1909- . Report on T-3. (Harvard alumni bulletin, Feb. 6, 1954. v. 56, p. 347)

"Dead plants lying on or near the surface of the ice island T-3 were collected during the summer of 1952 [when the island was about 100 miles from the North Pole]. These plant remains comprised about 300 gm. and included pieces of stick up to 12 cm. long and herbaceous tussocks up to 12 cm. in diameter. The plant materials [nearly all of which came from high arctic plants] support the theory that the ice island originated as shelf-ice on the N. coast of Ellesmere Island. Although the bulk of the ice island is probably of ancient origin, the surface material may be fairly recent."—SIPRE. A note of this report appears in American Meteorological Society. Bulletin, Feb. 1954. v. 35, no. 2, p. 78.

Contains general information on marine fishes and fisheries; yields per time unit and boat; fish reserves; herring (drift) fisheries; desired technical advances, etc.

Copy seen: DLC.

36872. POMERAT, CHARLES MARC, 1905-, and **R. B. LEWIS**. The effect of rapid freezing and thawing on chick embryonic epidermis, skeletal muscle and spindle cells. (U. S. Air Force School of Aviation Medicine, project no. 21-1202-0001, report no. 4, Aug. 1953) 3, 29 p., 36 illus. 7 refs.

Chick embryonic muscle was rapidly cooled to temperatures of -2° to -39° C. and cultured for two, three, or six days. "The results indicate that temperatures of -18° to -21° C. achieved in less than one minute are critical for the survival of embryonic muscle cells." Embryonic skin exposed to identical experimental conditions indicate that epidermis and spindle cells do not show the same degree of susceptibility as the muscle cells.

36877. PONOMAREV, P. A., and A. S. CHECHULIN. Rets ledokola "Krasin." (Leningrad. Arkhticheskii . . . institut. Bûlleten', 1932. v. 2, no. 6, p. 119-21, 143-44, illus.) Text in Russian and in English. **Title tr.:** A trip of ice-breaker *Krasin*.

A summary of reports delivered by the ship's captain and the head of the scientific staff. In Dec. 1931, the ice-breaker *Lenin*, after rescuing the *Malygin*, was caught in the ice off Vaygach; on Feb. 6, the *Krasin* was sent to her aid from Leningrad, and on Mar. 12, succeeded in reaching the *Lenin* and freeing her of ice pressure; shortage of fuel however, forced both ships to await better ice conditions and only in May did they reach open water. **Copy seen:** DLC.

36878. PONOMAREVA, L. A. Opitaniî planktonofâdnykh kitov Beringova moriâ. (Akademiâ nauk SSSR. Doklady 1949. nov. seriâ, t. 68, no. 2, p. 401-403) Text in Russian. **Title tr.:** On the feeding habits of plankton-eating whales of Bering Sea.

Contains results of the study of 54 stomachs of finbacks (*Balaenoptera physalus*) killed in Commander Islands waters and in Olyutorskiy Bay of Bering Sea in the 1947 season (June-Sept.): crustaceans of the orders Euphausiidae (*Thysanoessa longipes*, *T. inermis* and *T. raschii*) and Copepoda (*Calanus tonsus* and *C. cristatus*) are the principal plankton species consumed. Seasonal

and regional fluctuations of the whale food are represented (table 1).

36879. PONTIUS, ROBERT GILMORE, 1923-, and others. The use of hypothermia in the prevention of paraplegia following temporary aortic occlusion: experimental observations. (Surgery, July 1954. v. 36, no. 1, p. 33-38, fig., table, 3 graphs) 26 refs. Other authors: H. LeR. Brockman, E. G. Hardy, D. A. Cooley, and M. E. DeBailey.

Account of varied experiments with dogs submitted to aortic occlusion of one hour. There was only slight reduction in over-all mortality following use of hypothermia in these experiments, but there was a great reduction in the incidence of paraplegia, indicating a protective influence of hypothermia against ischemic damage of the spinal cord due to high aortic occlusion.

36880. POPHAM, ROBERT E., and W. D. BELL. Eskimo crania from Southampton Island. (Revue Canadienne de Biologie, Dec. 1951. v. 10, no. 5, p. 435-42)

Describes two Sadlermiut skulls, male and female, from stone graves at Native Point, south coast of Southampton Island, collected by W. D. Bell in 1950. The measurements are in fair agreement with those on nine male and five female Sadlermiut crania from Southampton Island described by Hrdlička (Arctic Bibliography, No. 7486) in 1910. A similar comparison with thirteen male and six female crania from the Thule culture site, Nauyas, on Repulse Bay (Arctic Bibliography, No. 5019) shows general agreement in physical type though the two from Native Point have wider faces and larger vaults than the Thule.

Copy seen: DSI.

36881. POPKOV, V. F. O deiatel'nosti Bil'ukaf v 1938-1939 gg. (Akademiia nauk SSSR. Kamchatskaia vulkanologicheskaiia stantsiia. Bülleten', 1946, no. 12, p. 29-53, illus., diagrs. (1 fold.), tables) 5 refs. Text in Russian. **Title tr.:** Activity of Bilyukay in 1938-1939.

The lateral vent Bilyukay on the eastern slope of Klyuchevskiy Volcano erupted on Feb. 7, 1938, and the ejected mass of slag, bombs, stones, sand and ash formed in a few days a cone 110 m. high. The author with others observed this eruption Nov. 1, 1938-Oct. 1, 1939,

and reports here on the chronology of volcano's activity, the lava discharge (a stream 15 km. long and 1.5 km. broad), ejection of bombs, the fumaroles and chemical composition of their vapors, etc. Another, smaller lateral crater Tiranus, is noted. The Bilyukay lava stream Nov. 1938 and Jan. 1939 is drawn in scale 1:50,000.

Copy seen: DLC.

36882. POPKOV, V. F. Sostoianie Kl'uchevskogo vulkana v 1940 g. (Akademiia nauk SSSR. Kamchatskaia vulkanologicheskaiia stantsiia. Bülleten', 1946, no. 12, p. 64-68, tables) 3 refs. Text in Russian. **Title tr.:** The activity of Klyuchevskiy Volcano in 1940.

Contains a journal of the activity of Klyuchevskiy Volcano in Jan.-Nov. 1940 and tables showing relation of ejection of vapors to average monthly atmospheric pressure. Due to discharge of volcanic energy by a lateral crater Bilyukay, and perhaps to eruption of Ploskiy Tolbachik, the activity of the main crater of Klyuchevskiy Volcano was weak and limited to ejection of vapors from the crater and from its fumaroles; even this reduced activity was several times interrupted by periods of total inactivity. **Copy seen:** DLC.

36883. POPKOV, V. F. Vulkanicheskaiia deiatel'nost' Ploskogo Tolbachika v 1940 g. (Akademiia nauk SSSR. Kamchatskaia vulkanologicheskaiia stantsiia. Bülleten', 1946, no. 12, p. 54-63, illus., plan, diagrs., tables) 8 refs. Text in Russian. **Title tr.:** The volcanic activity of Ploskiy Tolbachik in 1940.

Previous eruptions with ejection of lava were reported for 1739, 1793 and 1932; the last one began in Sept. 1939, and in Jan.-Sept. 1940 lava was ejected. In Mar. 1940, the author with two other scientists ascended the volcano to the crater. He gives a chronology of the activity Sept. 1939-Sept. 1940; describes the main features of the crater and characterizes the phenomena of eruptions (ejection of lava, discharge of vapors, volcanic bombs); the occurrence of "Pele's hair", a filamentous form of lava characteristic of Kilaua in Hawaii, is especially noted. **Copy seen:** DLC.

Inhabitants and nationalities of the Yakut country; an attempt at a statistical-ethnographical investigation.

A demographic and ethnographic monograph on the Yakut A.S.S.R., based on literature and the official surveys of 1917 and 1924. In its 3,964,286 sq. km. in 1924, there were 294,637 inhabitants; 83.2 percent were Yakuts, 8.5 percent Russians, and the remainder Tungus, Lamuts, Yukaghirs, and Chukchis. Numbers and nationality of the population are given according to districts (*okrug*), towns and villages (*ulus, naslegs*). Each nationality, its settlements, material culture, religious beliefs, etc., is described: Yakuts (p. 11-25), Tungus (p. 25-38), Yukaghirs (p. 38-44), Chukchis

(p. 44-52), and old Russian settlers (p. 52-55). Measures taken by the Yakut A.S.S.R. administration in the cultural and economic fields on behalf of the small aboriginal nationalities are noted (p. 56-58).

Title tr.: NN; microfilm in DLC.

Title tr.: On stone age implements in northern and eastern Siberia.

Contains description and measurements of stone and bone artifacts found near Nikolaevsk on the Amur, on the Sakhalin Island, in Kamchatka, at Chaunskaya Guba on the arctic coast, on the Anadyr River, and other places. Museums holding these objects and literature on them are indicated. The Yakuts were the only people in northeastern Asia who understood the use of iron before the coming of the Russians. Lamuts and Tungus took over this knowledge from Yakuts. The iron was worked by cold hammering. The stone and bone implements of Kamchadals, Yukaghirs and Chukchis are characterized; these people derived their implements from Russians.

36897. PORSILD, ALF ERLING, 1901- . Canada's reindeer experiment. (Book of popular science. Annual supplement, 1953. v. 6, p. 2415-23, illus.)

Contains brief description of the physical characteristics, food and habits of reindeer; their introduction into Alaska in 1891; conditions among the Eskimos in arctic Canada and desirability of introducing reindeer herding; the reindeer drive from Alaska to the Canadian reserve east of the Mackenzie Delta, Dec. 1929-Mar. 1935; and increase of the animals and herding practices carried on since 1935. **Copy seen:** DLC.

36898. PORSILD, ALF ERLING, 1901- . Land use in the Arctic, I-II. (Canadian geographical journal, June 1954, v. 48, no. 6, p. 232-43; July 1954, v. 49, no. 1, p. 20-31, 28 illus.) 30 refs.

Arctic vegetation has little direct significance for man, but is of importance in providing food for grazing and browsing animals. Man's direct use of wild plants and attempts at gardening and agriculture are briefly described, reindeer herding is treated in detail, history of the animal's domestication is outlined, Ural-Altaic and Paleo-Asiatic groups at present engaged in the industry are listed, and the introduction of the reindeer into Alaska is described. Its grazing habits on winter and summer ranges, plant species eaten, importance of the winter range, and significance of lichens as winter forage are discussed. Lichens are described, various species, their ecology and nutritive value are considered. The carrying capacity of reindeer pastures in Alaska and the Mackenzie Delta Reserve is examined; ranges in arctic Europe and Asia appear comparable. In North America, at least, the large-scale domestication of reindeer and musk-oxen does not appear economically feasible.

The vascular flora of the North American Arctic. (In: International Botanical Congress. 7th, Stockholm, 1950. Proceedings, pub. 1953. p. 613-14)

The region north of the tree line may be divided into four major floristic provinces: (1) Arctic Alaska and Yukon, (2) the Arctic Archipelago, (3) continental parts of Northwest Territories and northern Quebec, and (4) Greenland. The writer recognizes 894 species of vascular plants (representing 60 families, 195 genera) of which one third are widely distributed circumpolar, arctic species. Numbers of species and general phyto-geographic characteristics of each of the four provinces are very briefly described.

Describes stream-gaging operations in the Fortymile, Seventymile, and Eagle districts in 1911, with lists of gaging stations and statistical tabulations of stream measurements.

Copy seen: DLC.

36906. PORTER, VIVIAN S., and others. Effects of freezing on particulate enzymes of rat liver. (Journal

of biological chemistry. Dec. 1953. v. 205, no. 2, p. 883-91, tables) 17 refs. Other authors: Nancy P. Deming, Rita C. Wright, and E. M. Scott.

Freezing with dry ice of liver homogenates caused a marked reduction of their capacities to oxidize most substrates; oxidative phosphorylation stopped completely. Addition of some coenzymes brought some recovery of oxidative capacity; freezing in sucrose solution prevented the destructive effect of cold; freezing with the substrate was less effective. Slow freezing was less destructive than fast freezing.

36911. POTZGER, JOHN ERNEST, 1886- , and A. COURTEMACHE. A radiocarbon date of peat from James Bay in Quebec. (Science, June 25, 1954. v. 119, no. 3104, p. 908) 9 refs.

Peat material from the bottom level of a bog near Rupert River (51°28' N. 78°45' W.) showed a radiocarbon age of $2,350 \pm 200$ years. The C-14 dating is part of a study made in summer 1953 which indicates that forests migrated northward during the warm-dry post-glacial times, but have since withdrawn southward some 350 miles.

36921. PRESNALL, CLIFFORD C. Reindeer, an Indian Service contribution to the war. (North American Wildlife Conference. 8th, Denver, Col. Transactions, 1943. p. 110-17)

Deals with the reasons for the surplus in reindeer on Nunivak Island (60°06' N. 166°24' W.) and the plans to utilize it to aid the war. Information includes range quality, fate and increase of reindeer transplanted from the Alaskan mainland by the Lomen Reindeer Co. in 1920 and 1928, and sold to the U. S. Government in 1940. Plans for reducing herds, utilization of meat and hides, etc., are outlined. Musk oxen imported to Nunivak in 1935-36 are also noted to have prospered. **Copy seen:** DLC.

36922. PRESS, FRANK, 1925- , and W. BECKMANN. Geophysical investigations in the emerged and submerged Atlantic Coastal Plain, pt. 8. Grand Banks and adjacent shelves. (Geological Society of America. Bulletin, Mar. 1954. v. 65, no. 3, p. 299-314, illus., text map, 7 graphs, 4 cross-sections, table) 12 refs.

A reconnaissance seismic-refraction survey was conducted on the Grand Banks, St. Pierre Banks, Cabot Strait trough, and Banquereau in summer 1951 on

R. V. *Atlantis* cruise 173 and R. V. *Caryn* cruise 25 of the Woods Hole Oceanographic Institution. "Three stations on the Grand Banks indicate sedimentary layers ranging from 2300 to 10,700 ft. in thickness. The sediments are underlain by basement rocks having velocities of 16,150-18,200 ft./sec. . . . The sequence of subsurface layers found on the banks south and east of Newfoundland is not unlike that reported for the submerged shelf off the northeast coast of the United States and the banks off Nova Scotia. The seismic results and the recent results from dredging and coring operations support the hypothesis that the shelf off eastern North America is a depositional feature dating back to at least Lower Cretaceous time."—From author's abstract.

36923. PRESSMAN, JEROME. The latitudinal and seasonal variations of the absorption of solar radiation by ozone. Cambridge, Mass., Dec. 1954. 34 p. 34 fig., table. (U. S. Air Force Cambridge Research Center. Geophysics Research Directorate. AFCRC-TR-54-202. Geophysical research papers no. 33) 14 refs.

Latitudinal and seasonal variation of ozone absorption is calculated for constant ozone distribution over the earth and for an ozone distribution varying with latitude in accordance with Götze's values. The energy absorbed during twilight in northerly latitudes is included in the calculations. The variation of solar altitude with latitude and time of year together with the duration of illumination, produce the main effects, whereas the variation of ozone amount with latitude and season is of secondary importance.

36928. PRINDLE, LOUIS MARCUS, 1865- Auriferous quartz veins in the Fairbanks district. (In: U. S. Geological Survey. Mineral resources of Alaska in 1909. Bulletin, 1910, no. 442, p. 210-229, map)

Contains geographic and geologic sketches of the area, introductory to the discussion of the gold-bearing quartz veins. These are apparently associated with igneous intrusions into the metamorphosed pre-Ordovician schists at the close of the Mesozoic. The age, character, distribution, and metallization of the gold-bearing quartz veins are discussed. Principal metallic constituents of the veins are gold, pyrite, arsenopyrite, galena, stibnite, sphalerite, and bismuth. Numerous gold quartz deposits are described, and the method of prospecting for gold quartz lodes in this region is described.

36929. PRINDLE, LOUIS MARCUS, 1865-, and J. F. KATZ. The Fairbanks gold placer region. (In: U. S. Geological Survey. Mineral resources of Alaska in 1908. Bulletin, 1909, no. 379, p. 181-200, fold. map)

Contains the currently important results of a study of the geology and mining development in 1908 in the area covered by the Fairbanks special topographic map. A geographic sketch deals with the relief, drainage, climate and vegetation, and transportation of the region. The geology of both the bedrock and the unconsolidated deposits is described. Prospecting operations are described as well as open-cut and drift-mining methods. The fuel and power situation, costs of operation, and the length of the working season are also discussed, and the annual gold production from 1903 to 1908, inclusive, is given.

Copy seen: DLC.

36930. PRINDLE, LOUIS MARCUS, 1865- The Fortymile gold-placer district. (In: U. S. Geological Survey. Mineral resources of Alaska in 1907. Bulletin, 1908, no. 345, p. 187-97)

States very briefly the main geographic and geologic factors of the Fortymile gold-placer district (64°-65° N. 141°-142° W.) and the mining developments in 1907.

Copy seen: DLC.

36931. PRINDLE, LOUIS MARCUS, 1865-, and J. B. MERTIE. Gold placers between Woodchopper and Fourth of July Creeks, Upper Yukon River. (In: U. S. Geological Survey. Mineral resources of Alaska in 1911. Bulletin, 1912, no. 520, p. 201-210, fold. map)

Describes the location of the district, the mining developments, surveys and investigations, vegetation, and the ge-

ology. Gold placers constitute the only known mineral resource. The sources of the placer gold are briefly considered, and then the placer deposits on the productive creeks (Fourth of July, Washington, Coal, and Woodchopper Creeks) are described.

36932. PRINDLE, LOUIS MARCUS, 1865- . Occurrence of gold in the Yukon-Tanana region. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1907. Bulletin, 1908, no. 345, p. 179-86, map)

Contains a brief statement of the geology of the region and a description of the stream and bench alluvial gold deposits and the gold-bearing conglomerates, followed by a discussion of the origin of the gold in the deposits.

Copy seen: DLC.

36933. PRINDLE, LOUIS MARCUS, 1865- , and F. L. HESS. Rampart placer region. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1904. Bulletin, 1905, no. 259, p. 104-119, map)

Presents results of a field investigation of the Rampart gold placer region in central Alaska by the authors in 1904. Describes the geography, geology, and economic development of the region. Stresses need for skill and knowledge to work deposits less advantageously located than those now largely worked out. cf. *Arctic Bibliography*, No. 13959 for authors' bulletin from this field work.

Copy seen: DLC.

36934. PRINDLE, LOUIS MARCUS, 1865- . Sketch of the geology of the northeastern part of the Fairbanks Quadrangle. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1909. Bulletin, 1910, no. 442, p. 203-209, fold. map)

States the main geographic and geologic facts regarding the area north of the Fairbanks district and west of the Birch Creek district. Emphasizes the contrast between the highly metamorphic rocks of the eastern and southeastern portion of the area and the less metamorphosed rocks of the northwest portion, and the distribution of the granitic rocks. The placer mining developments in the valleys of Washington Creek, of Faith Creek and its tributaries, of Preacher Creek and its tributaries, and of Victoria Creek are noted.

Copy seen: DLC.

36935. PRINDLE, LOUIS MARCUS, 1875- . Yukon placer fields. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1905. Bulletin, 1906, no. 284, p. 109-127, illus., maps)

Contains descriptions of the occurrence and development of the gold placers of the Fairbanks, Saleha, Bonnerfield (i. e. Bonnifield) and Kantishna, Fortymile, Birch Creek, Rampart, and Koyukuk regions. The Fairbanks region is considered in much greater detail than the others. In this region the gold comes mainly from Cleary, Fairbanks, and Pedro Creeks, and from a few of their tributaries, and from Esther and Dome Creeks. The occurrence of the placer gold on these creeks and the mining methods and costs of mining operations are given.

PROKOF'EV, G. N., see Prokof'eva, E. D. Materialy po religiozным predstavlenċiċm ċntsev. 1953. No. 36937.

36937. PROKOF'EVA, E. D. Materialy po religiozным predstavlenċiċm ċntsev. (Akademiċ nauk SSSR. Muzeċ antropologii i ċtnografii. Sbornik, 1953. t. 14, p. 194-230, 9 illus.) 7 refs. Text in Russian. *Title tr.:* Materials on the religious conceptions of the Entsċy.

A broad study based on material collected by G. D. Verbov and G. N. Prokof'ev during their travels on the Taymyr Peninsula in 1938-1939, principally in the districts of Dudinsk and Ust'-Yeniseysk. Both men, on several

occasions between 1925 and 1939, made ethnographic trips in the Samoyed country: in the Bol'shezemel'skaya and Malozemel'skaya Tundras, the Yamalo-Nenetskiy district, and the districts of Taymyr and Turukhansk. Their field notes are preserved at the archives of the Institute of Ethnography of the Academy of Sciences in Leningrad.

A general sketch is given of the Entsya or Yenisey Samoyeds (p. 194-98): their territory, wanderings, tribal organization, names of clans, relations with other Samoyedic tribes, etc. Their religious beliefs and practices together with those of the Ostyak Samoyeds and sometimes the Tawgis are treated in detail. Their supreme deity and numerous spirits, cosmogonic myths, conception of the soul, burial and other customs, the shamans (three categories) and their functions, sacred places and objects, etc.

36938. PRUITT, FRANCIS W. Management of frostbite in the Korean war. (Nebraska state medical journal, Jan. 1954. v. 39, no. 1, p. 3-8, illus., tables) 7 refs.

Contains information on frostbite in general; American cold-injury casualties in Europe during 1944-45; American cold-injury cases in Korea; their degree; specific conditions under which injuries occurred; frequency of freezing in various body regions; therapy and hospital care; representative cases. For maximum tissue repair rapid thawing at 86°-89° F., early use of heparin, avoidance of tobacco, late amputation, etc., are recommended.

Copy seen: DSG.

36939. PRYTKOVA, N. F. Odezhda khantov. (Akademiia nauk SSSR. Muzei antropologii i étnografii. Sbornik, 1953. t. 15, p. 123-233, 114 illus., col. plate) 34 refs. Text in Russian. **Title tr.:** Ostyak clothing.

A monograph based on museum collections in Leningrad, Tobol'sk and Khanty Mansiysk, on archival materials (notes from expeditions), and literature, covering the period from the 17th century to 1940. Best known is the clothing of the northern Ostyaks; terminology is given in the dialect of Kazym. Materials and their preparation (reindeer hides and nettles), weaving and sewing implements, etc., are presented. Needle cases and skin sacks or birch-bark boxes for clothing storage are described. The garments of men, women

and children are investigated: native names, materials and patterns, ornamentation, wearing seasons and habits are discussed. The most important articles are: trousers and shirts (different according to sex), the man's summer robe (*khalat*), the woman's caftan or gown, winter fur coats, mittens, stockings and boots. Women wear ornamented breast laces and head ribbons; all ornamentation is of geometric design. The women's clothing has retained longer its national character. Underclothing was not used. The oldest and most original kind of garment was the *koleg*, a kind of parka for both sexes. The influence of Samoyeds, Russians, and Bashkirs in the Ostyaks garments is discussed.

Use of snow fences is most practical method of preventing drifts when area to be protected is a site for huts, dumps of stores, or other obstacles. Mechanics of snowdrifting and formation of drifts are discussed. Drifting occurs most frequently when air temperature is well below the freezing point, causing dry snow; the lowest windspeed associated with drifting is approx. 10 m. p. h. Fences are classified according to function as (1) leading, (2) blower, and (3) collecting fences, the last described in some detail. Construction and design of Canadian, Russian, Swedish, Norwegian, Danish, and U. S. snow fences are described and illustrated. Diagrams also show type of arrangements of collecting-type fences.

36942. PURDUE UNIVERSITY. JOINT HIGHWAY RESEARCH PROJECT. Interim report airphoto pattern reconnaissance of northwestern Canada. Prepared by Joint Highway Research Project, Purdue University, for the St. Paul District, Corps of Engineers. [St. Paul, Minn.?] Feb. 1953. 2 v. continuously paged (114, 2, 21 p.), 182 illus., 7 text maps. Mimeographed. 305 refs.

Contains results of the Purdue Canadian Arctic Permafrost Expedition of June-Aug. 1951 and includes data collected prior and subsequent to the expedition. The eight-man party (who jointly prepared this report) was led by K. B. Woods. Work was done under contract (W-21-018-eng-683) with the U. S. Army, Corps of Engineers. Field work was limited to areas along the southern part of the Alaska Highway in British Columbia and Yukon Territory, entire basin of the Mackenzie River, and vicinity of Great Slave Lake and of Great Bear Lake. Purpose of the expedition was to extend the range of arctic and subarctic airphoto soil patterns, to obtain field data on some of the soils and permafrost in northwest Canada, and "to further develop methods of using airphotos to identify and evaluate significant characteristics of terrain conditions that influence engineering operations in the arctic and subarctic." The itinerary is outlined; the physiographic provinces of western Canada, their glacial, water-deposited, and rock materials are described. Value of airphotos in evaluating soil conditions is discussed, and Alaska airphoto patterns are compared with those of Canada. Vegetation of subarctic forest and arctic tundra is discussed with relation to permafrost and to airphoto interpretation. Conclusions and recommendations are listed.

36953. RACHOU, C. Contribution à l'étude des pieds gelés. (France médicale, Feb. 1947. v. 10, no. 2, p. 6-8) Text in French. **Title tr.:** Contribution to the study of frostbite of the feet.

Contains an account based on 125 military cases treated and many more seen, with a discussion of causes (subjective and objective), pathogenesis and pathology, clinical cases and course, treatment, prophylaxis. Of a variety of means applied, lumbar infiltration and local application of vitamin B₁ proved the most effective. **Copy seen:** DSG.

36954. RADFORTH, NORMAN WILLIAM, 1912- . Palaeobotanical method in the prediction of sub-surface summer ice conditions in northern organic terrain. (Royal Society of Canada. Transactions, June 1954. Third series, v. 48, sect. 5, p. 51-64, 9 illus., text map, cross-sections, graph, 2 tables) 3 refs.

"The active layer, termed 'climafrost', and its relation to organic terrain are described with emphasis on terrain interpretation. The conclusions are based

on examinations for frost behavior made during the summer months in the Churchill (Man.) area over a period of three years. Isolated effects of frost action visible at the ground surface and due to ground ice are classified as vertical free lift, vertical confined lift and displacement fault. More widespread effects can be noted in typical climafrost contour patterns which are classified as polygon differential, pond hole, ridge elevation, boulder locus and multiple knoll."—SIPRE. Relationship of the climafrost contour to preserved subsurface vegetal remains (macrofossils) and to surface vegetal cover is discussed, with reference to organic terrain mapping and interpretation of aerial photographs.

Copy seen: DGS; DLC.

36955. RADFORTH, NORMAN WILLIAM, 1912- . Palaeoecological research in northern Canada. (In: International Botanical Congress. 7th, Stockholm, 1950. Proceedings, pub. 1953. p. 573)

Contains brief description of investigations at Churchill, Man., to discover and classify characteristics of organic terrain. Counts of pollen and spore microfossils are a basis for classifying peat areas. Permafrost must be considered in characterization of terrain conditions.

Copy seen: DGS; DSI; MH-A.

36956. RADFORTH, NORMAN WILLIAM, 1912- . Progress report on organic terrain studies. Ottawa, June 1950. 17, 24, 14, 11 p. 16 plates, sketch map, 2 graphs, 2 tables. (National Research Council of Canada. Associate Committee on Soil and Snow Mechanics. Technical memorandum, no. 16) 26 refs.

Extensive aerial and ground investigations were carried out in summers 1947, 1948, and 1949 by the author and several assistants in the muskeg, or "organic terrain," near Churchill, Man. Fifteen aspects of the work are listed. Progress in the first of these, "Utilization of micro and macro fossils in organic terrain characterization," is briefly discussed, with notes on technical methods of determining micro fossil constituents in peats. Types of pollen and spores collected are listed by plant family and briefly described. Results of N. V. Polunin's aerobiological work in 1947 are indicated (paper listed as *Arctic Bibliography*, No. 25192), with a classification of airborne pollen.

Appendices: Pollen analysis of peat underlying a treeless heath area in the forest-tundra transition near Churchill, Manitoba, by E. J. Johnson.

Record of fossil and living pollen types in the Fort Churchill area (outline drawings of pollen by plant family).

Plants in the Royal Botanical Gardens Herbarium collected at Churchill.

Copy seen: DGS.

36957. RADFORTH, NORMAN WILLIAM, 1912- . Suggested classification of muskeg for the engineer. (Engineering journal, Nov. 1952. v. 35, no. 11, p. 1199-1210, 10 illus., 7 graphs, 2 tables) *Also pub. as:* National Research Council of Canada. Associate Committee on Soil and Snow Mechanics. Technical memorandum, no. 24, May 1952.

Contains results of five seasons' field work at Churchill, Man. and in European muskeg areas, also winter laboratory studies, supported by the Associate Committee on Soil and Snow Mechanics, National Research Council of Canada. Conditions to be recognized in classification of organic terrain deposits are described: subsurface constitution, size and disposition of constituent particles, water content and drainage, organic-inorganic interface, surface coverage, living organic layer, topographic factor, seasonal aspect. A summary of the classification is presented and discussed in detail. Nine coverage class types are recognized, the properties of each class relating to qualities of the vegetation (woodiness, height, texture, growth habit) rather than to the species of plants involved. Application and value of the system are discussed.

Copy seen: DGS.

36958. RADFORTH, NORMAN WILLIAM, 1912- . The use of plant material in the recognition of northern organic terrain characteristics. (Royal Society of Canada. Transactions, June 1953. Ser. 3, v. 47, sect. 5, p. 53-71, 4 illus., 3 text maps, 3 graphs, 2 tables) 5 refs. *Also pub. as:* National Research Council of Canada. Associate Committee on Soil and Snow Mechanics. Technical memorandum, no. 28, Mar. 1954.

Emphasis is placed on recognition of botanical relationships among plant components, living and fossilized, in defining cover types and subsurface features within organic terrain. A muskeg classification system proposed by the author in 1952 (item above) is described, with

examples from the Churchill (Man.) region. Significance of plant remains in interpretation of organic terrain, and correlation of surface and subsurface vegetal data in interpretation of certain types of topographic forms, e. g., polygon formations, are discussed.

36959. RAE, JOHN, 1813-1893. John Rae's correspondence with the Hudson's Bay Company on Arctic exploration, 1844-1855. Edited by E. E. Rich, assisted by A. M. Johnson. With an introduction by J. M. Wordie and R. J. Cyriax. London, Hudson's Bay Record Society, 1953. cvi, 401 p. illus., port., 3 maps (2 fold.) (Hudson's Bay Record Society. Publications). 16 refs.

Contains letters from the archives of the Hudson's Bay Company in London and information derived from the Franklin relics at the National Maritime Museum, Greenwich. A detailed introduction (p. xiii-cvi) outlines Rae's early life, the course of arctic exploration in North America 1818-1839, Rae's first expedition 1846-1847, the Franklin Expedition 1845-1847, Rae's second, third, and fourth expeditions, 1848-1849, 1851, and 1853-1854, his report to the Admiralty in London in 1854 and the subsequent payment of the Franklin search reward. Rae's achievements in arctic travel and exploration are evaluated; his later life and (30) scientific papers briefly noted. The letters (p. 1-297) are arranged chronologically from Aug. 19, 1844 to Mar. 27, 1855. Many letters written in the course of his normal duties in the fur trade are not included. *Appendices* (p. 300-378) contain letters to Rae primarily from Sir George Simpson, lists of supplies and equipment for his expeditions, and roster of participants, with biographical sketches of some 60 individuals. An extensive index is added by which information is made accessible on Back River and other geographic features, boats, dogs, expeditions, pemmican and other foods, etc. Reviewed by V. Stefansson in *Beaver*, Mar. 1954, Outfit 284, p. 36-37, with comments on Rae's methods of Arctic travel and survival; also, more extensively in *Geographical journal*, Dec. 1954, v. 120, p. 486-93.

36960. RAE, JOHN, 1813-1893. On the condition and characteristics of some of the native tribes of the Hudson's Bay Company's territories. (Society of Arts,

London, Journal, Mar. 24, 1882. v. 30, no. 1,531, p. 483-99)

Address delivered before the Society on Mar. 21, 1882, dealing only with tribes, Dr. Rae states, of which he had personal knowledge during his travels for the Hudson's Bay Co. about 1837-1854. Includes description of the physical appearance, clothing, daily routine, living conditions, and hunting habits and methods of the Swampy Cree Indians of northern Ontario and Quebec, Dogrib Indians of Mackenzie District, and Eskimos of Mackenzie (Coppermine River) and Keewatin (Repulse Bay) Districts. Tribute is paid to Eskimos' intelligence and skills (treatment of frostbite, etc.). Discussions following the paper contain additional information on the Crees and on the Chukchis of Siberia. Excerpts from the address are published in *Beaver*, Mar. 1954, Outfit 284, p. 38-41.

36961. RAE, R. W. Canadian meteorology. (Encyclopedia Arctica [unpub.] v. 7, Meteorology and oceanography, July 1951. pt. 2, charts, maps (fold.)) 38 refs.

"An excellent treatise on the history of the Canadian weather service (and previous meteorological observations and reports from the earliest days), the Arctic weather stations in Canada and the principal voyages in which Canada or Canadians participated. A detailed list of Arctic weather stations in Canada gives coordinates, elevation, length of record and names of observers. The two polar years (1882-83 and 1932-33) and the joint U. S. and Canadian Arctic network are given special attention. A description, with illustrative data, of the climate of various parts of the Canadian Arctic is of particular value as it contains data summarized through 1945 or 1950. Biographies of the directors from 1841 to date, a good bibliography, and numerous charts add to the value of this report."

Meteorological abstracts and bibliography, Mar. 1954. v. 5, no. 3, p. 309-310.

36966. RAND, AUSTIN LOOMER, 1905- . Glaciation, an isolating factor in speciation. (Evolution, Dec. 1948. v. 2, no. 4, p. 314-21, 5 text maps) 15 refs.

A study of cases of arctic birds where two forms with a continuous range have developed to a stage combining characteristics of subspecies and species ("semi-species," "species in the making") without apparent geographic isolation. The study suggests the existence of isolation during glaciation periods, when many forms retreated to (isolated) refugia. A number of such refugia is reconstructed for a series of paired species of such birds. With the retreat of the glaciers these isolated groups met again and now show various degrees of relationship.

Coppy seen: DGS.

36967. RAND, AUSTIN LOOMER, 1905- . The ice age and mammal speciation in North America. (Arctic, June 1954. v. 7, no. 1, p. 31-35) 4 refs.

On the basis of studies of botanists and his own on arctic birds (cf. item above), the author suggests a number of refugia where, during glaciation, speciation of mammals took place in geographic isolation. These refugia are reconstructed on the basis of closely related mammalian species, including the most complex case, that of the caribou forms.

36982. RATCLIFFE, A. L. Die strategische Bedeutung der Arktis. (Wehrwissenschaftliche Rundschau, Mar. 1952. 2 Jahrg., Heft 3, p. 129-31) Text in German. *Title tr.:* Strategic significance of the Arctic.

Brief notes on the growing importance of polar areas in view of the development of aviation, on legal theories of sovereignty, (the no-man's land theory vs. the sector theory), on Soviet activities

aiming to open and utilize the Arctic, and on competition of the U. S. S. R. with the U. S. A. in control over the Arctic Basin, which means the control over vast areas of the adjoining continents.

36983. RATHBUN, MARY JANE, 1860-1943. Catalogue of the crabs of the family Maiidae in the U. S. National Museum. (U. S. National Museum. Proceedings. July 26, 1893. v. 16, no. 927, p. 63-103, plates 3-8)

Contains keys to the subfamilies, genera and species, followed by a systematic list of 39 species (five described as new) deposited in the U. S. National Museum. Another list is offered of a hundred species not represented in the Museum's collection; also an extract from an unpublished report of Dr. William Stimpson on the Crustacea of the North Pacific Exploring Expedition, 1853-1856, with descriptions of twelve species. Some of these crabs extend from the Atlantic via arctic waters to the Pacific, and some occur in the Bering, Okhotsk and Labrador Seas. *Copy seen:* DLC; MH-Z.

36990. RAUSCH, ROBERT LLOYD, 1921- . Studies on the helminth fauna of Alaska, XX. The histogenesis of the alveolar larva of *Echinococcus* species. (Journal of infectious diseases, Mar.-Apr. 1954. v. 94, no. 2, p. 178-86, 8 fig.) 11 refs.

A detailed description of histogenesis of the larval stages of echinococcus species derived from St. Lawrence Island in Bering Strait, and submitted to laboratory infections. The ability of the St. Lawrence form to produce secondary vesicles exogenously explains its rapid invasiveness of host tissue and constitutes a main difference in larval development from *Echinococcus granulosus*.

36991. RAUSCH, ROBERT LLOYD, 1921- . Studies on the helminth fauna of Alaska, XXI. Taxonomy, morphological variation, and ecology of *Diphyllobothrium ursi* n. sp. provis, on Kodiak Island. (Journal of parasitology, Oct. 1954. v. 40, no. 5, sec. 1, p. 540-63, 20 fig. on 2 plates) 47 refs.

Emphasis has been placed in this investigation on morphological variation of *Diphyllobothrium* on Kodiak Island. A wide range of morphological variation was observed in the adult forms of this genus. Hence it is suggested to rear these parasites under controlled conditions, to study their growth, various stages, etc.

36992. RAUSCH, ROBERT LLOYD, 1921- . Studies on the helminth fauna of Alaska, XXII. *Paranoplocephala wigginsi* n. sp., a cestode from an arctic ground squirrel. (American Microscopical Society. Transactions, Oct. 1954. v. 73, no. 4, p. 380-83, 2 fig.) 4 refs.

Contains description of a new species of tapeworm from the vicinity of Point Barrow, Alaska. Slides with specimens are deposited at the U. S. National Museum.

Copy seen: DSI-M.

36993. RAUSCH, ROBERT LLOYD, 1921-, and **E. L. SCHILLER.** Studies on the helminth fauna of Alaska, XXIV. *Echinococcus sibiricensis* n. sp., from St. Lawrence Island. (Journal of para-

sitology, Dec. 1954. v. 40, no. 6, p. 659-62, fig.) 9 refs.

Contains description of a new species, closely resembling *E. granulatus*. Field and laboratory observation over a period of four years contributed also much information on the life cycle and ecology of this species whose larval form is an important parasite of man.

Copy seen: DSI-M.

36994. RAYDONIKAS, VLADISLAV IOSIFOVICH, 1894- . Istoriia pervobytnogo obshchestva. Leningrad. Izdanie . . . Universiteta, 1939-1947. 2 v.: 286, 393 p. illus., text maps. Text in Russian. *Title tr.*: History of primitive society.

Contains a course of lectures delivered to students of history at Leningrad University in 1936-1939. Based on archaeological and ethnographic materials they follow strictly the line of historical materialism. In v. 2, family organization among the Eskimos and Paleo-Siberians is noted (p. 30-32), the so-called Baltic-Arctic neolithic in northern Scandinavia (p. 231-38) and the neolithic culture of the hole-comb ceramics treated extensively (p. 259-87). The region of this culture extended over all eastern European U. S. S. R., from the Kola Peninsula to East Prussia and Poland, and in a somewhat different form, over Asiatic Russia from the Ural Mts. to Lake Baykal. The technique of the hole-comb ceramics, their three chronological groups, and the most important sites, including those around the White Sea, are described. Dwellings, tools and implements of the hole-comb ceramic people, who were primarily fishers, secondarily hunters, are characterized, and compared with the culture of the present-day Gilyaks. The burial customs and art, richly represented by the graves on Yu. Oleniy Ostrov in Lake Onega, and by the rock paintings on the lake's eastern shores, and on the White Sea coast are held typical for this culture. Sun and moon, totemistic symbols, animals and birds are common features of this prehistoric art.

36995. RAYDONIKAS, VLADISLAV IOSIFOVICH, 1894- . Naskal'nye izobrazheniia Onezhskogo ozera i Belogo moria. Moskva-Leningrad, 1936-1938. 2 v.: v. 1: 211 p., col., front. 38 text illus. and maps, 82 plates, part fold.; v. 2: 168 p., 19 text illus. and maps, 87 plates,

part fold. (Akademika nauk SSSR. Institut antropologii, arkhologii i etnografii. Trudy, t. 9-10. Arkheologicheskaya seriia, no. 1) Text in Russian. Summary in French v. 1, p. 143-205; v. 2, p. 105-162. *Title tr.*: The rock pictures of Lake Onega and the White Sea.

Contains in v. 1, detailed descriptions and illustrations of some 700 figures engraved on rocks of the eastern shores of Lake Onega, investigated by the author in 1935. The composition of the engravings, their technique and style are analyzed, the work of earlier investigators and their conclusions are considered. A supplement by B. F. Zemliakov *Neoliticheskie stoianki vostochnogo berega Onezhskogo ozera* (Neolithic sites of the eastern shore of the Lake Onega) is added (p. 111-41).

In v. 2, seven groups of rock engravings, discovered on islands in the Vyg River near its effluence into the White Sea, and investigated by the author in 1937, are described and illustrated. The pictures, mostly incised with a stone implement and realistic in character, depict northern reindeer, swans and other birds, fish, men shooting arrows and running on skis, etc. In the same region, several neolithic sites with comb ceramics dating about 2,500-1,000 B. C. were found. The White Sea sites and petroglyphs are stated to be older than those of Lake Onega, and two different styles can be observed. The White Sea style is purely realistic, the magic of hunters and totemistic conceptions predominating, the Onega petroglyphs show a trend to geometric figures, and are complicated by the intrusion of mythological elements, the cult of sun and moon. The plates of reproductions bear Russian and French captions. Two paintings of the local landscape by L. A. Ivanov are reproduced in color.

36997. RAWSON, DONALD S., 1905- . The bottom fauna of Great Slave Lake. (Canada. Fisheries Research Board. Journal, Nov. 1953. v. 10, no. 8, p. 486-520, illus., 3 text maps, 7 graphs, 9 tables) 24 refs.

Contains the full report on studies carried on in summers 1944-1947, as part of investigation of limnology and fisheries of Great Slave Lake. The macroscopic bottom organisms were sampled with more than 600 dredgings, and additional ecological information was obtained from qualitative collections and from examination of stomach contents of fish. Equipment and methods of sampling are described in detail. The 95 species found are listed with comments on distribution. Subjects discussed at some length include composition and depth distribution of the bottom population, regional differences, bottom fauna at great depths, influence of the Slave River delta, bottom organisms as fish food, and comparison with bottom fauna of other lakes.

36998. RAWSON, DONALD S., 1905- . Estimating the fish production of Great Slave Lake. (American Fisheries Society. Transactions, 1947, *pub.* 1949. v. 77, p. 81-92, text map, 3 graphs, table) 13 refs.

Contains results of studies made during a fishery investigation of the lake, 1944-1947. Physical and chemical studies, sampling of plankton and bottom fauna, and detailed analyses of the fish catch were made. Lake depth and temperature are described and a general summary of observations is given. The fish represent some 23 species, dominated by ciscoes, lake whitefish and trout. Evidence suggests that Great Slave has a capacity for sustained production not unlike that of the upper Great Lakes and Lake Nipigon. Commercial fishing began July 1945 and production is now 3.7 million pounds per year. A continuing program is carried on to determine effects of fishing on fish population.

36999. RAWSON, DONALD S., 1905- . Studies of the fish of Great Slave Lake. (Canada. Fisheries Research Board. Journal, Oct. 1951. v. 8, no. 4, p. 207-240, text map, 12 graphs, 9 tables) 26 refs.

Contains information on composition, distribution and general ecology of the major fish species of Great Slave Lake. Investigations were part of a survey made during 1944-1947, in part to estimate the lake's capacity for fish production. The fish population dominated by lake trout, common whitefish and ciscoes, includes at least 24 species, 21 of which are listed. Following an account of methods of sampling, the areal and depth distribution of the larger species are discussed with calculation for each species of average length and weight of individuals caught in each mesh size. A short description of each species, and notes on food chains and ecological distribution are given. Twenty-one species of parasites are recorded from ten species of fish.

37000. RAY, RICHARD GODFREY, 1920- . Geology and ore deposits of the Willow Creek mining district, Alaska. Washington, D. C., U. S. Govt. Print. Off., 1954. 86 p. 23 illus., 15 maps (9 fold.), 6 tables. (U. S. Geological Survey. Bulletin 1004) 18 refs.

Contains results of surface mapping and underground studies during summers 1948, 1949, and 1950 in the 50 sq. mi. Willow Creek gold mining district (61°45' N. 149°26' W.), southern Alaska. The region is underlain mainly by intrusive rocks (predominantly quartz diorite), probably of late Mesozoic age, which form the southern margin of the Talkeetna batholith. These are flanked on the south by older mica schists of unknown age and by sedimentary rocks of Tertiary (?) age. Structural features are described. Productive gold quartz veins and associated lamprophyre, diabase, aplite, and pegmatite dikes are common within shear zones in the quartz diorite. Formation and characteristics of the veins, mineralogy of the ore, and alteration of the wall rock are discussed; 16 gold mines in the region are described.

The 43 dogs (62 prior to transport) used during the expedition came from Vestspitsbergen, West Greenland, and Falkland Islands Dependencies. Their care at the base and during journeys is described, with details of types and amounts of rations and effect on the

dogs. Of 25 pups born during the first year, 16 survived. Five teams of ten dogs were used. Driving methods are noted, harnesses are described and illustrated. The Spitsbergen dogs were found superior to the others. Dog transport has a limited role in modern antarctic exploration. The author recommends a few small, well-trained teams for reconnaissance work and travel in difficult country, supported by mechanical transport. **Copy seen:** CaMAI; DLC.

37008. REED, CLYDE FRANKLIN. Some nomenclatural changes in the genus *Isoetes*. (American fern journal, July-Sept. 1945. v. 35, no. 3, p. 77-86)

Contains a revision of the nomenclature of the quillwort *Isoetes*, with description of six forms, synonymy, critical notes, and data on distribution. Synonyms and distributional notes on six other species are given in the footnotes. *Isoetes asiatica* (Kamchatka), *I. muricata* var. *braunii* n. comb. (W. Greenland), *I. maritima* (Aleutian and Commander Islands) and *I. truncata* (Alaska and Kodiak Island), are included.

Presents the results of a petrographic study of five thin sections and three polished sections, and chemical analyses of specimens from a thick sill of a basic nickel-bearing rock (troctolite) occurring near the northern end of Admiralty Island in Southeast Alaska not far from Juneau. The petrographic studies show much smaller quantities of nickel in the sill than do the chemical analyses. Inferred that a considerable part of the nickel is present in some other mineral than the pentlandite recognized. Olivine is suggested.

37016. RESHETNĬĀK, V. V. Novye vidy radiolārīl Okhotskogo morā. (*Akademiiā nauk SSSR. Zoologicheskii institut. Trudy*, 1953. t. 13, p. 33-37, illus.) 7 refs. Text in Russian. **Title tr.:** New species of Radiolaria of the Sea of Okhotsk.

Contains descriptions of three new radiolarians, *Tuscanetta horrida* n. sp., *Coelacantha dogieli* n. sp. and *Circospathis sexfurca trifida* n. subsp., collected by the Expedition of the Institute of Oceanology. **Copy seen:** DLC; MH-Z.

37017. RETTY, JOSEPH ARLINGTON, 1904- Canada's iron ore resources; exploitation and development of the Quebec, and Labrador deposits. (*Times review of industry*, Jan. 1952. v. 6, no. 60 (new series), p. 68, 71, illus., text map, table).

Discovery of the deposits, and formation and organization of the Iron Ore Co. of Canada are described, with notes on the financial structure of the company. Physical geography of the iron ore area on the Quebec-Labrador border and geology of the ore deposits are reviewed. Techniques of exploration, the airlift of equipment, and building of the Quebec North Shore & Labrador Railway are described in some detail. Construction of the railroad terminal at Seven Islands, Que., and of hydro-electric plants to supply power to the mines and to Seven Islands is also noted.

Copy seen: DLC.

37018. RETTY, JOSEPH ARLINGTON, 1904- . The New Quebec and Labrador iron ore project. Montreal, July 1948. 17 p. Mimeographed.

Contains information in outline form on the Knob Lake - Burnt Creek region on the Quebec-Labrador border. Brief descriptive notes are given on: location and area, access, mining companies, control, history 1893-1948; physical features and climate, etc.; inhabitants, fish and game; early exploration and mining developments; present organization of mining companies and recent developments (to 1948); transportation and communications; geology, ore deposits, drilling and mining methods, future possibilities, etc.

37023. RHOADS, SAMUEL N. The Hudsonian chickadee and its allies, with remarks on the geographic distribution of bird races in boreal America. (Auk, 1893. v. 10, no. 4, p. 321-33)

Contains a study of geographic variation of *Parus hudsonicus*, occurring in Labrador, and three subspecies: the Labrador chickadee, *P.h. ungava*, n. subsp. (northern Labrador); the Kowak chickadee, *P.h. stoneyi* (northwestern Alaska); and the Alaskan chickadee, *P.h. evura* from Mackenzie District and Alaska. Descriptions, critical notes and data on habitat and geographic distribution are given; a table of measurements of the *P. hudsonicus* group is added.

37024. RHODE, CECIL E. When giant bears go fishing. (National geographic magazine, Aug. 1954. v. 106, no. 2, p. 195-205, 15 col. illus.)

Contains popular article on Alaska Peninsula brown bears (*Ursus gyas*), their feeding and fishing habits, training of the cubs, etc.

Copy seen: DLC.

37025. RHODE, CLARENCE J., and W. BARKER. Alaska's fish and wildlife. Washington, D. C., U. S. Govt. Print. Off., 1953. 60 p. illus. incl. maps. (U. S. Fish and Wildlife Service. Circular 17 (supersedes Circular 3)) 39 refs.

Contains a popular account of the geography, climate, resources, population, etc., of Alaska; its geographical regions, their climate, and more common forms of wildlife and fish; Alaskan fishes, shellfish and crustaceans (described in the order of their economic value), land and sea mammals, birds. Wildlife management and license requirements are

outlined. Fish and wildlife, also trees and shrubs important to wildlife are listed with popular and scientific names. Twelve range maps are included, as well as extensive illustrations by Bob Hines.

37027. RĬABCHIKOV, EVGENĬI, IVANOVICH. Gorod semidesfâtoi paralleli. (Vokrug sveta, May-June 1946, no. 5-6, p. 39-40, illus.) Text in Russian.

Title tr.: The town at the 70th parallel.

The story of Noril'sk is recounted, the new Soviet industrial center of the far North, in the tundra of the Taymyr. Its importance derives from the local coal, ferrous and non-ferrous ores and mineral deposits, and its proximity to Dudinka on the Yenisey River, one of important harbors of the Northern Sea Route. The natural resources of the region were tapped sporadically in 1868, at the time of the Trans-Siberian railroad construction, and during the Russo-Japanese War in 1905. Exploitation of the region began in the Soviet period, and today its center, Noril'sk, the town of contrasts, is flooded in electric light, and has asphalt pavements. It is connected with Dudinka by railroad, and played a noticeable part in supplying the U.S.S.R. with raw materials during the last war.

Copy seen: DLC.

37028. RĬABKOV, P. Polârnynâ strany Sibiri; zamêtki i nablûdeniâ v Koly-

mskom okrugê. (Sibirskii sbornik, 1887. p. 1-42) Text in Russian. **Title tr.:** The polar lands of Siberia; notes and observations in the Kolyma district.

Contains a sketch of natural conditions in this district of some 670,000 sq. versts, in the Kolyma and Alazeya River basins (71°-61° N. 114°-142° E.), and history of Russian settlement centered in Sredne-Kolymsk and Nizhne-Kolymsk. The anthropological type of the local population is outlined: Yukaghirs subdued by the Russians, whom they joined against Chukchis and Koryaks; Russians of Nizhne-Kolymsk strongly mixed with Yukaghirs, and those of Sredne-Kolymsk racially influenced by Yakuts. The racial influence of Tungus is also possible as slave trade, mostly in Tungus women and children, was abolished only in 1826. Physical and cultural characteristics of these Russian-native cross-breeds are given. The social and economic life of the Kolyma inhabitants is outlined (p. 32-42), the poor health conditions and commonest diseases are noted: syphilis, rheumatic pains, typhus, leprosy, hysteria (êmirâchestvo), etc. Native cures and the activities of Yakut shamans are described.

Copy seen: DLC.

37029. RĬABOV, V. Na Talmyre; putevye zametki. (Okhotnich'i prostory, 1954. v. 4, p. 108-115, illus.) Text in Russian. **Title tr.:** In the Taymyr; a traveler's notes.

Notes by a hunting expert, member of an expedition to Taymyr Peninsula, on his flight to Dudinka; a trip to the settlement Volochanka (71° N. 94°28' E.) and to a kolkhoz; hunting wild reindeer and (from hearsay) polar bear.

37032. RICE, MARY L., and others. Selective annotated bibliography on the climate of the Arctic Basin. (Meteorological abstracts and bibliography, Sept. 1954. v. 5, no. 9, p. 1061-1112) *Other authors:* A. Assur and M. Rigby.

Contains first in a series of five selective bibliographies on climatology and meteorology of the Arctic. The 237 references deal mainly with the Arctic Basin and its marginal seas and coastal regions. Climatological studies of the area as a whole and studies dealing with specific elements are included. Sources of data, particularly expeditionary reports, have been given preference over purely descriptive material. Abstracts range from about 35 to 200 words. Subject, form of work, and geographic indexes are provided. The second in this series will appear in July 1955. The series will form a basic reference work.

RICH, EDWIN ERNEST, 1904- , *see* Rae, J. John Rae's correspondence . . . 1844-1855. 1953. No. 36959.

37034. RICHARDS, HORACE GARDNER, 1906- . Geological studies in the Mackenzie delta, arctic Canada. (Earth science digest, Apr. 1950. v. 4, no. 9, p. 3-6, illus.) 2 refs.

Contains description of author's trip in summer 1948 from Edmonton to Aklavik, with visits to Herschel Island and Kittygazit opposite Richards Island. Cretaceous and Pleistocene fossils were collected. No evidence was found of Pleistocene marine submergence in the immediate vicinity of the delta, but Pleistocene marine fossils were found west of it. Any postglacial rise of the delta area would probably have been counteracted by subsidence caused by sediments brought down by the Mackenzie.

Contains new synonymies and placements of eight species of stoneflies. *Capnia labradora* n. sp. from Nain, Labrador, and *Alloperla severa* (Unga Island, and Matanuska valley, Alaska) are included. **Copy seen:** DSI; MH-Z.

37038. RIDGE, FRANK GERALD. 1926- . General principles for the planning of sub-arctic settlements. Submitted to the Faculty of the Graduate School in partial fulfillment of the requirements for the degree Doctor of Philosophy, in the Department of Geography, McGill University. Montreal, Aug. 1953. viii, 569, 9 p. illus., 19 text maps, 9 tables. Typescript. 76 refs.

Contains a study of the most important settlements of Yukon Territory and Mackenzie District to show present conditions and development, and to indicate scope and direction of planned future development. In three parts, of which the first deals with the regional environment (physical and human) affecting settlement in the western sub-Arctic: administration, inhabitants, geomorphology, hydrography, climate, soils, vegetation, fauna, transportation, and communications. Pt. 2 consists of nine intensive settlement studies based on three months' field work: Dawson City, Whitehorse, and Mayo Landing (Yukon Territory); Fort Smith, Hay River, Yellowknife, Fort Simpson, Norman Wells, and Aklavik (Mackenzie District). For each, the site, history of settlement, land-use, function, and services are considered. Tables of climatic data are included. Pt. 3 presents fundamental considerations, administrative organization, and general principles for planning, based on problems encountered in the nine settlements. **Copy seen:** CaMM.

37039. RIDGWAY, ROBERT, 1850-1929. Birds new to the fauna of North America. (American naturalist, July, 1874. v. 8, no. 7, p. 434-35)

Notes and measurements of the gyrfalcon of northern Europe and Siberia (*Falco gyrfalco*) obtained by W. H. Dall, on June 30, 1873, at Kiska Harbor, western Aleutian Islands; also *Numenius femoralis* collected by F. Bischoff on May 18, 1869 (no localities given).

Contains synonyms and a detailed description of the adult dress (male and female) of the Labrador gyrfalcon, *Hierofalco gyrfalco obsoletus*, native to arctic Canada.

Copy seen: DSI; MH-Z.

37042. RIDGWAY, ROBERT, 1850-1929. Descriptions of new genera, species and subspecies of American birds. (Biological Society of Washington. Proceedings, Sept. 30, 1903. v. 16, p. 105-111)

Deals with four new genera, four species and sixteen subspecies which "are included in Part III of 'Birds of North and Middle America,' now mostly in print" (Bulletin of the U. S. National Museum, no. 50). *Budetes flavus alascensis* n. ssp. (type from St. Michael, Alaska, June 1, 1877, L. M. Turner) is included.

Copy seen: DSI; MH-Z.

37043. RIDGWAY, ROBERT, 1850-1929. Descriptions of some new North American birds. (Biological Society of Washington. Proceedings 1885, pub. 1884. v. 2, p. 89-95)

Contains diagnoses and measurements of eight new subspecies, among them *Parus atricapillus turneri* n. ssp. collected at St. Michael, Alaska, May 1, 1876, by L. M. Turner.

Copy seen: DSI; MH-Z.

37044. RIDGWAY, ROBERT, 1850-1929. Diagnoses of some new forms of Picidae. (Biological Society of Washington. Proceedings, Feb. 24, 1911. v. 24, p. 31-35)

Contains diagnoses of eleven new subspecies of woodpeckers (Picidae) from various regions. *Colaptes auratus borealis* n. ssp. from Nulato, lower Yukon River, Alaska, (June 23, 1867, W. H. Dall) is included. **Copy seen:** DSI; MH-Z.

37045. RIDGWAY, ROBERT, 1850-1929. Discovery of the breeding place of McKay's snowflake, *Plectrophenax hyperboreus*. (Auk, Apr. 1886. v. 3, no. 2, p. 276-77)

Report of the find of a juvenal specimen of this bird on Hall Island in Bering Sea (approx. 60°30' N. 173° W.) by C. H. Townsend, on Sept. 8, 1885. Its center of abundance (probably St. Matthew's Island) is discussed.

Copy seen: DSI; MH-Z.

37046. RIDGWAY, ROBERT, 1850-1929. The great black-backed gull (*Larus marinus*) from a new locality. (Nuttall Ornithological Club. Bulletin, Jan. 1882. v. 7, no. 1, p. 60)

Report of two specimens of this bird received in the U. S. Natural Museum: "from Herald [Gerald] Island, in the Arctic Ocean, northwest of Bering Strait, and from Port Clarence on the American side of the Strait, the former collected by Captain C. M. Hooper of the U. S. Revenue Cutter *Corwin*, the latter by Dr. T. H. Bean."

Copy seen: DSI; MH-Z.

37047. RIDGWAY, ROBERT, 1850-1929. The little brown crane, *Grus fraterculus*, Cassin. (Nuttall Ornithological Club. Bulletin, 1880. v. 5, no. 3, p. 187-88)

Contains brief descriptive notes, synonyms and data on distribution of this crane known from Kodiak and St. Michael in Alaska, and Franklin Bay and Anderson River, Mackenzie District; a comparison with *G. canadensis* and measurements of both species are added. **Copy seen:** DSI; MH-Z.

37048. RIDGWAY, ROBERT, 1850-1929. A new classification of the North American Falconidae, with descriptions of three new species. (Academy of Natural Sciences of Philadelphia. Proceedings, Dec. 1870. p. 138-50)

Contains a critical revision of North American Falconidae, with keys to the

subfamilies, genera and species; generic and specific characters, critical notes and data on habitat and distribution. *Falco (Hypotriorchis) richardsonii* n. sp., native to the interior from the Arctic southward to Texas, is included.

Copy seen: DSI; MH-Z.

37049. RIDGWAY, ROBERT, 1850-1929. Nomenclature of North American birds chiefly contained in the United States. National Museum. Washington. U. S. Govt. Print. Off., 1881. 94 p. (U. S. National Museum. Bulletin, 21)

Generic, specific, and English names changed, corrections of authorities and statistical data are given (p. 5-10); followed (p. 11-57) by a catalog of 764 species of the birds, 924 names in all. A condensed analysis of the changes in North American nomenclature is added (p. 59-84) with addenda and index to the genera. The catalog includes many species native to northern regions of this continent and Greenland; stragglers or visitors in eastern North America which occur regularly in Greenland are listed (p. 75-76), as are palaearctic and oceanic species occurring only in Alaska and other parts of the Pacific coast. **Copy seen:** DLC; MH-Z.

37050. RIDGWAY, ROBERT, 1850-1929. Notes on the *Anser leucopareus* of Brandt. (U. S. National Museum. Proceedings, 1885, pub. 1886. v. 8, p. 21-22)

Contains a discussion of identity and synonymy of the white-cheeked geese of North America, including *Anser leucopareus* Brandt which is considered a synonym of *A. hutchinsi*. A very small species breeding in western Alaska and migrating south to California in winter, is described as *Branta minima* n. sp. (little cackling goose).

Copy seen: DLC; MH-Z.

37051. RIDGWAY, ROBERT, 1850-1929. Notices of certain obscurely known species of American birds. Based on specimens in the Museum of the Smithsonian Institution. (Academy of Natural Sciences of Philadelphia. Proceedings, June 1869, p. 125-35, illus.)

Contains a critical revision of 14 species of American birds of the genera *Turdus*, *Pyrranga* and *Quiscalus*. *T. swainsonii* (Mackenzie and Yukon Rivers), *T. aliciae* (shore of Arctic Ocean from Labrador to the Aleutians Islands)

and *Q. aeneus* (Hudson Bay region and Labrador) are included.

Copy seen: DSI; MH-Z.

37052. RIDGWAY, ROBERT, 1850-1929. On a new Alaskan sandpiper. (Nuttall Ornithological Club. Bulletin, 1880. v. 5, no. 3, p. 160-63)

Contains a description of *Arquatella couesi* n. sp., native to the Aleutian Islands and coast of Alaska, north to St. Michael; the comparative characters of *A. maritima* (northeastern North America, Europe, etc.), *A. couesi* and *A. pilocnemis* (Pribilof Islands, Alaska) are given.

Copy seen: DSI; MH-Z.

Injury to marine flora in the Shelikof Strait region of Alaska (58° N. 154° W.) apparently resulted from: (1) grinding effect of floating pumice, (2) actual burial of plants by the deposit of ash, (3) burial by ash of rock which had furnished anchorage for marine algae, (4) effect of poisonous gases on plants growing in the littoral zone or whose distal portions are kept at the surface by floats. Discussion is based on the writer's observations in the region in summer 1913, one year after the eruption. Effects on the kelps *Alaria*, *Nereocystis*, and *Fucus* are particularly noted.

Izvestiia, Ser. geograficheskai, Jan.-Feb. 1954. no. 1, p. 33-40) 13 refs. Text in Russian. **Title tr.:** Scientific principles for regulating the present natural processes of the tundra zone.

The tundra zone of the U. S. S. R. covers over three million sq. km., nearly 15 percent of the total surface. Its utilization is handicapped by low temperature, excessive humidity, winds, and poverty of the soil. These unfavorable conditions can be mitigated by accelerating the spring thaw with a heat-absorbent cover (crumbled peat, ash, soot) upon the snow, by removing the peat and moss layers from the soil, draining the surface water, by fertilizers and manure, afforestation, and by cultivation of frost-hardy plants. All these methods are successfully applied in the U.S.S.R., and the northern frontier of stable agriculture has been pushed to 69° N. lat. in the European part, and 71° N. lat. in Asia. In several kolchozes beyond the Arctic Circle, crops of over 200 cwt. of potatoes and over 400 cwt. of cabbage are taken from one hectare. This article is based on works of A. A. Grigor'ev (cf. *Arctic Bibliography*, No. 6226), V. P. Dadykin, G. N. Vysotskii, and other Soviet scientists.

37064. RIKHTER, GAVRIIL DMITRIEVICH, 1889-. Snezhnyi pokrov i ego rol' v narodnom khoziaistve. (Akademiia nauk SSSR. Izvestiia. Ser. geograficheskai, May-June 1954. no. 3, p. 42-49) 12 refs. Text in Russian. **Title tr.:** Snow cover and its significance in the national economy.

In the great open spaces of the U.S.S.R., snow appears in a variety of forms, requiring special research into its properties and methods of regulation. As the main source of soil moisture, and as plant cover against frost, snow is to be accumulated, properly distributed and retained. But as drifts, blocking roads, in avalanches, and as pressure damaging roofs, etc., snow must be countered with measures of prevention and protection. Its utilization as material for building ice-storage (method of M. M. Krylov) is mentioned.

37080. RIVET, PAUL, 1876—. Les origines de l'homme américain. (Anthropologie, Paris, 1925. t. 35, no. 3-4, p. 293-319) 117 refs. Text in French. **Title tr.:** The origins of the American man.

Contains discussion of the whole problem, concluding that the American man immigrated from other continents at the end of the paleolithic period. At that time he had no knowledge of the use of iron, writing, the wheel, or of barley and rye. The American bronze culture is indigenous. Ethnographic data apparently show the American population to have consisted of several elements: an Australian, a Malayo-Polynesian, a north Asiatic (very strongly represented), and an Eskimoid. The Eskimos were of Ural-Altaic origin, the easternmost representatives of Uralo-Altaic peoples whose center presumably had been situated somewhere in a region east of the Caspian Sea. The dispersal of these peoples is sketched. Several affinities in material culture, customs and language between peoples in the New and Old World are mentioned. The theory supported by A. Hrdlička, of the peopling of America via Bering Strait is accepted, but not considered the sole solution. The cultures of California, the Central and South America apparently show influences from the Pacific. **Copy seen:** DLC.

37081. RIVISTA MARITTIMA. Base aerea di Thule. (Rivista marittima, Nov. 1953. anno 85, n. 11, p. 532) **Title tr.:** Thule air base.

Contains note on Soviet naval and air bases, meteorological stations, and railways in northern Siberia, the development of the Northern Sea Route, and the strategic importance of the Chukotsk Peninsula and Gulf of Anadyr in relation to Alaska. **Copy seen:** DLC.

37083. ROADS AND STREETS. Maintaining the Alaskan Highway. (Roads and streets, Dec. 1952. v. 95, p. 106-109, 118, illus., text map)

"Organization and maintenance operations of the Northwest Highway System, which is responsible for the 1221 mi. of the Alaskan Highway in Canada, are described. Maintenance is divided seasonally into spring, summer and winter operations. Spring operations consist mainly of cutting back snowbanks, steaming out frozen culverts and blading the road or scarifying the ice. One-way plows and graders are used for snow removal in the winter. The biggest problem is the control of icings. Countermeasures against icings include ditching, raising the road grade, erecting dikes and blasting. Parallel, sackcloth fences are sometimes erected in line with potential icings to retard, if possible, the advance of the ice sufficiently to protect the road until spring."—SIPRE

37088. ROBERTS, ELLIOTT BURGESS, 1899- . Arctic magnetic surveys. (Navigation, Sept. 1948. v. 1, no. 11, p. 221-28, 2 fig.)

The need for Arctic magnetic studies is presented; past work is reviewed, and an approach to a solution using airplanes is outlined. The use of airborne magnetometers capable of indicating the field continuously is noted. Airplane installations believed necessary and suitable for an airborne survey of magnetic declination are suggested. Appended is a list of some arctic expeditions to 1945 in which magnetic observations were made, with the establishment of temporary or permanent observatories indicated where known. Map of the Arctic Basin shows wholly unexplored areas of magnetic declination. *Copy seen:* DLC.

37089. ROBERTS, THOMAS SADLER, 1858- . A Lapland longspur tragedy: being an account of a great destruction of these birds during a storm in southwestern Minnesota and northwestern Iowa in March, 1904. (Auk, 1907. v. 24, no. 4, p. 369-77)

Contains the results of an investigation by Dr. Dart on the mass destruction of Lapland longspur (*Calcarius lapponicus*). These birds traveling north encountered a snowstorm, became wet, snow-laden and unable to fly; some were killed (in cities) when they flew against various obstacles while many others sank to the ground exhausted; about 750,000 dead birds were estimated on the ice of two lakes alone in the Worthington region, Minnesota. *Copy seen:* DSI; MH-Z.

37090. ROBERTSON, GEORGE W. Some agro-meteorological problems in Canada. Toronto, 1953. 18 p. diagr., 6 graphs, 2 tables. Mimeographed. (Royal Meteorological Society. Canadian Branch. Papers, v. 4, no. 2) 13 refs.

An estimated 18,000,000 acres of potentially arable land exist in northwestern Canada for which suitable plant varieties must be bred, adapted to climate and day-length. Features of the climate contributing to unusual or abnormal growth habits in the North are noted. Preliminary investigations were initiated in summer 1952 by the Dominion Experimental Farms Service in

Ottawa to develop a method for studying crop response to meteorological environment. Studies of (1) relation of crop development to day-length, and (2) part played by sunshine and other meteorological factors in controlling the effective growth temperature of a crop, are described in some detail. Air temperature alone is not sufficient in certain studies of environmental factors; effect of radiant energy, transpiration, and wind on heat balance of a crop must also be considered. Tables include climatic data for Aklavik and Ft. Simpson, Mackenzie District. Future problems and research are noted.

37096. ROBINSON, JOHN LEWIS, 1918- . Mapping in the North American Arctic. (Geographical review, Apr. 1954. v. 44, no. 2, p. 290-92)

The intensive mapping initiated during World War II is being continued for strategic reasons, as an aid in developing natural resources, and to assist air travel. Two million square miles of the Canadian Arctic were photographed from the air by the Royal Canadian Air Force within a few years following the war, while surveys established the ground control network. The first series of maps are at a scale of 8 mi.:1 in. Plans for mapping are made 18 months in advance of operations, and supplies are sent in during the summer preceding them.

COPY seen: DLC.

37097. ROBINSON, JOHN LEWIS, 1918- . Northward by road and rail. (Beaver, Summer 1954. Outfit 285, p. 43-45, 4 text maps)

Survey of economic advantages anticipated from extension of surface transportation facilities into northern areas of exploitation. Among those discussed are the Quebec North Shore & Labrador Railway; railway to nickel mines at Lynn Lake, northern Manitoba; Mackenzie Highway from Grimshaw, Alberta, to Hay River, Great Slave Lake; Alaska Highway and the all-season road from Whitehorse to Mayo, east central Yukon.

37100. ROBITZSCH, MAX, 1887- . Einige bemerkenswerte Registrierungen und Beobachtungen vom deutschen Spitzbergen - Observatorium 1912-13. (Naturwissenschaftliche Wochenschrift, Aug. 16, 1914. Bd. 29 (neue Folge 13), no. 33, p. 513-18, 10 illus. incl. sketch map) Text in German. **Title tr.:** Some remarkable records and observations from the German Spitsbergen Observatory, 1912-13.

Thunderstorm, air temperature, snow drift, snow-crystal, glaciation, and wind observations made by K. Wegener and the author at the observatory on Krossfjorden (79° N. 11°30' E.) Vestspitsbergen, during the winter of 1912-13 are briefly discussed. A "valley phenomenon" characterized by irregular variations of the air temperature curve due to a shifting cold air layer near the valley floor is described with accompanying temperature graphs. Unusual snow-drift formations are described. Hexagonal prisms and plates predominate among snow crystals at temperatures below -10° C. Several observed anomalies in the structure of snow crystals are discussed and microphotographs of such anomalies are included.

Contains an annotated list of leafy and peat mosses from North America and a few extra-American species. More than 200 species are recorded, including nine from Labrador, 19 from Greenland and one (*Dicranum fuscescens*) from Alaska.

Copy seen: MH-BL.

37111. RÖTHLISBERGER, HANS. Quartärgeologische Beobachtungen am Eglinton Fjord, Baffin-Land, Kanada. (Naturforschende Gesellschaft in Zürich. Vierteljahrsschrift, 1951. Jahrg. 96, p. 252-57, illus., 2 text maps) Text in German. Summary in English. *Title tr.:* Quaternary geological observations at Eglinton Fjord, Baffin Land, Canada.

Contains observations of moraines and other traces of glaciation in the valleys

near the inner end of Eglinton Fjord (70°50' N. 69°45' W.), northeast coast of Baffin Island, made by the writer during the summer 1950 expedition of the Arctic Institute of North America (led by P. D. Baird). He investigated the valley between Sam Ford Fjord and upper end of Eglinton Fjord, and that between Eglinton Fjord and upper Ayr Lake in two extended foot surveys and a short flight. He comments upon the position of the Barnes Ice Cap during the deglaciation period. A comparison made between the moraines of an outflow glacier and those of mountain glaciers near the head of Eglinton Fjord showed that "when the inland ice of Baffin Island still flowed into the sea, the glaciation in the mountains was about the same as (perhaps less than) today."

37116. ROLFSRUD, ERLING NICOLAI, 1912- . Brother to the eagle. Alexandria, Minn., Lantern Books, 1952. 181 p. illus. maps on endpapers.

Popular account of the life and exploits of the arctic and antarctic pilot, Carl Ben Eielson, 1897-1929, his early flying in North Dakota, attempts to establish airmail and commercial flying services in Alaska, his flights in Alaska 1926-1927 with Sir Hubert Wilkins, participation in Wilkins Alaska-Spitsbergen flight 1928, and in Wilkins' Antarctic Expedition in winter 1928-1929 are described; and finally his death on Nov. 9, 1929 on a flight to relieve the icebound *Nanuk* in the Chukchi Sea. An appreciation by Sir Hubert Wilkins introduces the account. *Copy seen:* DLC.

37117. ROLLEFSEN, GUNNAR, 1899- . Changes in the abundance of fish populations. (In: United Nations Scientific Conference on the Conservation and Utilization of Resources, *Lake Success*, N. Y., 1949. Proceedings, v. 7, *Wildlife and fish resources*, pub. 1951. p. 2-5)

Contains description of the fluctuations in Norwegian cod and herring fisheries in the Greenland Sea and Lofoten Islands areas. Three types of fluctuations are distinguished in cod: (1) yearly

variations on the spawning banks; (2) short time variations: three- to five-year periods of higher or lower catch; and (3) long-time variations: approx. 25-year periods of higher or lower catch since 1870. Fluctuations appear to be result of natural conditions, not changes in fishing intensity. Herring approach the Norwegian coast in Jan.-Feb. and after spawning return to Norwegian Sea and northern waters. They appear to be abundant in inshore waters for periods of 50 to 80 years, then fall off for 30 to 60-year intervals.

37118. ROLLEFSEN, GUNNAR, 1899- . Observations on the cod and cod fisheries of Lofoten. (International Council for the Study of the Sea. Rapports et procès-verbaux, 1953, pub. 1954. v. 136, p. 40-47, 10 graphs, 2 tables)

"Age, length, and growth studies, and tagging experiments, etc., undertaken on cod in Norwegian and arctic waters have shown that there are many reasons for regarding the cod of the Barents Sea, and the spawning cod which every year appear on the Lofoten banks, as belonging to one population." These studies are briefly described. Yearly total yield of the Lofoten cod fishery, and number of fish per man per season, 1860-1953, and gutted weight of the cod, 1883-1953, are shown in graphs; long-term, short-term and irregular fluctuations in the catch are discussed. Characteristics of arctic cod (Barents Sea year round and north Norwegian coast Nov.-June) and those of coastal cod (Norwegian fjords and banks year round), are noted, as well as changes in growth rate and maturation of the cod population, rate of mortality, and relative strength of year-classes, 1924-1939.

37123. ROONEY, WILLIAM JOSEPH, 1890- Auroral and earth currents. (Terrestrial magnetism and atmospheric electricity, June 1934. v. 39, no. 2, p. 103-109, illus.)

"A comparison of auroral observations and earth-current records from the College-Fairbanks station [Alaska; 64°51' N. 147°50' W.] during the International Polar Year 1932-33 shows considerable agreement between the aurora and disturbances in the earth-current records. Coefficients of linear correlation from 0.71 to 0.76 were obtained from the records for 80 clear nights. Effects associated with brilliant isolated auroral displays at College are readily detected in the earth-current records at Tucson, Arizona, and in exceptional cases, in records obtained as far south as Huanacayo, Peru. Oscillatory disturbances in the earth-current records and moving types of aurora, respectively, seem to show the highest degree of correlation. These results are at variance with comparisons of magnetic and auroral records which indicate a lack of relationship between the two phenomena."—*Meteorological abstracts & bibliography*, Mar. 1954. v. 5, no. 3, p. 389.

37134. ROSS, H. L. A grid system of air navigation. (Shell aviation news, London, Nov. 1947. no. 113, p. 18-19, illus.)

Description of the Greenwich Grid system of navigation and directional measurement, which is particularly suitable for flying in polar regions since it reduces the problem of course steering to a minimum. The ambiguity of direction at the Pole is removed since all directions are defined accurately in degrees Greenwich. *Copy seen:* DLC.

37135. ROSS, JOHN EARL RATZ, 1892- Canadian shoran effort, 1949-1953. (Empire survey review, Apr., July 1954. v. 12, no. 92, p. 242-54, plates XI-XIX incl. fold. map; no. 93, p. 290-303, 3 tables)

Shoran electronics, navigational instruments, signal requirements, calibration, meteorological factors, line crossing and length measurement, adjustments and order of closure, and modifications

for increased accuracy are discussed in detail. Field operations for 1952 at Yellowknife, Churchill, and the eastern Quebec-Labrador area, are described. In the five seasons of operation 325 lines have been measured and 86 shoran stations have been established. Existing trilateration lines measured are shown on a map. Previous years' reports are listed as No. 25663 and 31704.

Copy seen: DGS; DLC.

37136. ROSS, JOHN EARL RATZ, 1892- Shoran trilateration in Canada, 1949-1953. Ottawa, Queen's Printer, 1954. 46 p. 14 illus., 3 text maps, 3 diagrs., 3 graphs. (International Union of Geodesy and Geophysics. Association of Geodesy. General Conference. 10th, Rome, 1954. Report) 35 refs.

Includes report on 1953 field operations in the northern Quebec-southern Baffin Island region (55°-70° N.). Serious difficulties in ground station installation, communications, ground station operation and maintenance, airborne equipment operation and maintenance, and electronics are described. Other subjects discussed with relation to operations throughout Canada include calibration (detailed discussion), antenna sites, airborne station elevation, reduction to geodetic distance, line crossing and length measurement, adjustment and order of closure, and modifications for increased accuracy. *Maps* show Geodetic Survey trilateration net for Canada including Northwest Territories and northern Quebec, also shoran operations completed in 1949-1953 and proposed for 1954 (Yukon Territory and western Mackenzie District). Bibliography of Canadian articles on shoran is appended.

Copy seen: DLC.

37137. ROSS, MALCOLM D. The Deacon, pioneer in arctic space. (Aero digest, Aug. 1954. v. 69, no. 2, p. 26-28, illus.)

Contains description of research and implementation of "Project Skyhook", begun in 1947 by the U. S. Office of Naval Research to perform meteorological and cosmic ray studies, as part of a basic research program in nuclear physics sponsored jointly with the U. S. Atomic Energy Commission. By means of balloons, and recently, *Rockoon*, a constant level polyethylene balloon-rocket combination, special atmospheric studies have been made from northwestern Greenland near the North Geomagnetic

Pole. The rocket, called *Deacon*, is lifted into the stratosphere by the helium-filled balloon at a speed of 800 ft./min., and is then fired by an automatic timing device, breaking loose with a 35 "g" acceleration coasting to a maximum altitude of 300,000 ft. A Geiger counter or ionization chamber and a small FM transmitter are enclosed in the rocket's nose for recording and telemetering cosmic ray data. Meteorological equipment is also carried. **Copy seen:** DLC.

37138. ROSSIGNOL, M., Rev. Property concepts among Cree of the Rocks. (Primitive man, 1939. v. 12, no. 3, p. 61-70)

Contains description of the land tenure system, ownership of personal property and exchange of goods among the Cree Indians living between the Saskatchewan and Churchill Rivers (about 53°30'-56° N. 99°-106° W.). Based on observations over about 39 years.

Copy seen: DSI.

37139. ROSSITER, HARRIET. Alaska calling; a laugh on every page. New York, Vantage Press, 1954. 200 p. illus. maps on endpapers.

Contains popular descriptions (in story form, for the young) of Ketchikan, Wrangell, Petersburg, Juneau, Skagway, Sitka, Fairbanks, Kotzebue, Nome, Anchorage, Cordova, Kodiak, and Metlakatla (Indian village), the Alaska Highway, and the Alaska King Salmon Derby, also some Indian legends.

37143. ROSTLUND, ERHARD, 1900- Freshwater fish and fishing in native North America. Berkeley and Los Angeles, University of California Press, 1952. x, 313 p. fig., 4 tables, 47 maps. (University of California publications in geography, v. 9) over 600 refs.

Following an introductory chapter on the nutritive value of fresh-water fishes, the principal species are dealt with, including largely arctic groups like the salmonides, whitefish, northern pike and fresh-water cod. Next, the quantitative aspect and productivity of North American fresh-waters are discussed. The main part of the study (p. 79-208) deals with aboriginal fishery and fishing methods, including spearing and fish-poisoning. Arctic conditions and peoples, of Asia as well as North America, are considered throughout. The last chapter "References to aboriginal fishing methods" gives a handy breakdown of the literature into ethnic and geographical areas. An extensive bibliography, distributional maps (with references) for the principal fishes, fishing methods, etc., and an efficient index complete the study.

37146. ROUCH, JULES ALFRED PIERRE, 1884- Les mers polaires. Paris, Flammarion, 1954. 251 p. (Bibliothèque de philosophie scientifique) **Title tr.:** The polar seas.

The general nature of the polar regions is described: characteristics summer and winter, the aurora and other optical phenomena, appearance of the landscape by day and night, movements of the magnetic poles, and climate. Separate chapters are devoted to discussion of: Hudson Bay; Canadian Arctic Islands waters; Labrador Sea, Davis Strait, and Baffin Bay; Denmark Strait and Greenland Sea; Barents Sea; White Sea; Kara Sea; Laptev, East Siberian, and Chukchi Seas; Bering Sea; Arctic Ocean; Antarctic Ocean. In each case, a brief history of exploration of the area is given, and boundaries, depths, nature of the ocean floor, climate, winds, temperature and salinity of surface and deep waters, tides, currents, and ice conditions are described. The final chapter discusses the Poles in French literature.

ROUSSANOF, V. A., *see* Rusanov, Vladimir Aleksandrovich, 1875-1913.

37148. ROUSSEAU, JACQUES, 1905- 1, Les plantes indicatrices des nunataks dans le Québec. 2, La zone hémiairectique dans le Québec. (In: International Botanical Congress. 7th, Stockholm, 1950. Proceedings, pub. 1953. p. 614-15) Text in French. **Title tr.:** 1, Plants indicative of nunataks in Quebec. 2, The hemiarectic zone in Quebec.

Four lists of plants published by Fernald in 1925 (*Arctic Bibliography*, No. 29003) are revised in the light of more recent investigations of Quebec flora. Some in his second and fourth lists are no longer considered indicative of non-glaciation. The term "hemiarectic" is proposed for the forest-tundra zone (forested valleys and tundra hill-tops), a band some 200-300 km. wide between the true tundra and true taiga. Discussion by E. Dahl.

Copoly seen: DGS.

37149. ROUSSEAU, JACQUES, 1905- The value of botany as indicator of unglaciated areas. (In: Pacific Science Congress. 7th, New Zealand, 1949. Proceedings, v. 5, Botany, pub. 1953. p. 178-86) 18 refs.

Contains criticism of Fernald's *Persistence of plants in unglaciated areas of boreal America* (*Arctic Bibliography*, No. 29003) based on field observations by the author, Lepage and Dutilly, and others in northern Quebec (Ungava Peninsula). Fernald's lists of plants indicative of unglaciated areas include 255 species recently found by Rousseau and others in undoubtedly glaciated regions. These species are therefore of little or no value as nunatak indicators.

37153. ROWE, ROBERT B. Pegmatitic lithium deposits in Canada. (Economic geology, Aug. 1954. v. 49, no. 5, p. 501-515, 3 illus., 3 text maps) 21 refs.

Includes description (p. 504-507) of the Yellowknife-Beaulieu district, Great Slave Lake (approx. 62°-63°10' N. 112°-114°30' W.). The region is underlain by Precambrian lavas, pyroclastics, graywackes, impure quartzite, and slate of the Yellowknife Group, and their altered equivalents, intruded by granodiorite and granite. Granitic pegmatites, some containing beryl, columbium-tantalum minerals, amblygonite, and spodumene, occur in the medium to high-grade metamorphic rocks surrounding the granite bodies, or in granodiorite near the granite bodies. Outstanding characteristics of the lithium-bearing peg-

matites are listed. Little is known of the grade and tonnages of the deposits.

37156. ROZANCHUGOV, K. Iz istorii nenetskogo naroda 30-40-kh godov XIX v.; dvizhenie Vauli Piettomina. (Krasnyĭ arkhiv, 1939. t. 92, p. 151-76) 6 refs. Text in Russian. *Title tr.*: From the history of the Samoyed people in 1830-1840; the movement of Vaul Piettomina.

Contains an account, with supporting documents, of a revolt against the Russian administration, merchants and upper class natives collaborating with the Russians, led by Vaul Piettomina, a Samoyed. The insurgents, poor Samoyeds and Ostyaks, demanded that taxes be cut by a half and that reasonable prices be fixed for imported goods. They seized reindeer herds from their rich kinsmen, and Vaul forming a band of about 400 men became master in the Obdorsk region for some ten years. He and his close associates were finally trapped at Obdorsk (now Salekhard) by a ruse, brought to trial and sentenced to hard labor and deportation to eastern Siberia. Official proceedings on the case, in the Berezovo district court in 1839, and the Tobol'sk governmental court in 1841 are published here from the Omsk historical archives. *Copied seen:* DLC.

37163. RUDDER, BERNHARD de, 1894- . Grundriss einer Meteorobiologie des Menschen; Wetter und Jahreszeiteinflüsse; dritte neubearbeitete Auflage. Berlin - Göttingen - Heidelberg, Springer-Verlag, 1952. Text in German. 7, 303 p. illus., tables, maps. about 800 refs. **Title tr.:** Outline of a meteorobiology of man; influences of weather and seasons, third revised edition.

A critical study on the influence of weather and climate upon the human organism. Pt. 1 (p. 3-9) concerns methodology: deductive and inductive

meteorobiology. Pt. 2 (p. 9-122) deals with the effects of weather upon man, and with the "meteorotrope diseases" like rheumatic and other pains; effects of cold fronts, especially on pulmonary embolism; cardiovascular diseases and weather; kidney and respiratory diseases, poliomyelitis and influenza as affected by weather; effects on human physiology (blood, nervous system, etc.); the influence of weather components including cold air masses, etc. Pt. 3 (p. 123-261) is devoted to seasons and man; seasonal diseases, including rickets; "hibernation" of the bones and of metabolism; injuries of the winter season; winter peaks in infectious diseases; etc. The problem of meteorobiology in medical practice is discussed (p. 261-67) in conclusion.

Bulletins et mémoires, 1914. sér. 6, t. 5, fasc. 2, p. 123-43, tables) 32 refs. Text in French. **Title tr.:** Results of anthropological measurements of the peoples of northwestern Siberia.

Contains presentation and evaluation of measurements made by the writer on (a) 54 Samoyeds living on the lower Ob' River and the arctic coast between the Ural Mts. and the Tazovskaya Guba, (b) 75 Voguls of the Sos'va and Sygva rivers, and (c) 127 Ostyaks of the regions around the Obskaya Guba, Berezovo, Obdorsk, Muly-Gort, and the Kazym River. The work of other anthropologists and their publications

are reviewed, comparisons made between their results and his own. A summary of the anthropological characteristics of all three peoples is given and their racial inter-relations are discussed. The Samoyed type differs strongly from the Vogul, and the Ostyaks may be considered as an intermediary type between the two. The northern Ostyaks are close racially to the Samoyeds, and the southern Ostyaks to the Voguls. The Asiatic Samoyeds are more Mongoloid, and the European ones closer to the Finnish peoples, especially the Lapps. The people closest anthropologically to the Samoyeds are the Soyots and Yeniseians. The probable homeland of the Samoyeds, therefore, might be sought in the Sayan Mts. The Ostyaks and Voguls show great racial differences from other Finno-Ugric peoples.

37173. RUSANOV, VLADIMIR ALEK-SANDROVICH, 1875-1913. Ekonomicheskoe znachenie Sïvernogo morskogo puti v Sibir'. (Arkhangel'skoe obshchestvo izucheniia Russkago Sïvera. Izvîstiia, Aug.-Sept. 1911. v. 3, no. 15, p. 184-91 and no. 16, p. 341-48). Reprinted in the author's *Stal'i, lektsii, pis'ma*, 1945, p. 92-104 (*Arctic Bibliography*, No. 15006). *Title tr.*: Economic significance of the Northern Sea Route to Siberia.

Development of the Northern Sea Route is defended against criticism by proponents of a plan to construct a railroad from Arkhangel'sk to the Ob' basin. Comparing the two schemes, the author concludes that only the Sea Route can solve the transport problem for Siberia.

37174. RUSANOV, VLADIMIR ALEK-SANDROVICH, 1875-1913. Les oscillations des lignes de rivages et le retrait des glaciers en Nouvelle-Zemble. Mémoire posthume. (Revue de géographie, 1916-1921, new ser., t. 9, no. 6, p. 3-19, 17 illus., text map) 4 refs. Text in French. *Title tr.*: Oscillations of the shorelines and the retreat of glaciers in Novaya Zemlya. Posthumous memoir.

Contains preliminary report of the author's observations during a second exploration of Novaya Zemlya 1909-1910, presented by Charles Vélain. The islands, which constitute a northern extension of the Ural Mts., have undergone a series of marine transgressions. Submergence in the Jurassic, emergence in the Tertiary and submergence again in early Quaternary are noted. Relation of flights of marine terraces on the coasts to various phases of glaciation during the Quaternary is discussed. Descrip-

tion is given of deepening of the present fiord valleys during the glacial period, of Mityushikha Bay, strait of Matochkin Shar, the recent retreat of glaciers on north and south islands, appearance of land recently uncovered by the ice, and morainic deltas built into the sea off the retreating glacier tongues. Probable relation of recent retreat of glaciers to recession of the sea is noted. *Illus.* include photographs of Samoyed encampment. A postscript by Prof. Ch. Vélain explains that Rusanov intended to incorporate results of further investigations before publication of this paper, but his tragic death on his expedition of 1912-1913 prevented. Russian translation of it was published as pt. III, no. 9, in Rusanov's *Stal'i*, 1945 (*Arctic Bibliography*, No. 15006).

Arctic characteristics and conditions are surveyed with reference to the Canada.

The terms Arctic and sub-Arctic are defined. Exploration of the Canadian Arctic is outlined, and a sketch given of transportation, including types of ships used (with notes on the Eastern Arctic Patrol), dog team hitches and where used (with diagrams of hitches and sled types, Canada, Alaska, Greenland), mechanized ground and air transport. Permafrost and construction of houses and roads, arctic clothing and low temperature effects on the human body, flora and fauna, medical and associated problems, are also considered. Eight Canadian Arctic settlements are briefly described.

A new hydro-meteorological station and attached to it, a magnetic observatory, equipped with self-recording instruments, began operations in Sept.-Oct. 1923 at the Kara Sea end of Matochkin Shar. The ten-man staff of the station included technicians and scientists (magnetometrist, geologist, meteorologist, biologist.) Its main task is to supply, together with other stations in Yugorskiy Shar, Vaygach and Mare-Sale, meteorological and hydrological information (Kara Sea ice conditions) for the Northern Sea Route service; it will serve as a base for systematic exploration of northern Novaya Zemlya, and a cultural center for the sparse local population. Plans to establish radio stations on Mys Zhelaniya and Belyy Ostrov are mentioned. Folded sketch-map shows location of existing and planned stations.

Fort (ostrog) Yakutsk was founded in 1632; the Okhotsk seacoast was reached by Ivan Moskvitin in 1639, and Kamchatka by Vladimir Atlasov in 1697. Since then, the Russians have made repeated attempts to introduce agriculture on the Pacific coast; V. Atlasov and Vitus Bering, for example, were eager to establish farming in Kamchatka. Most of these experiments failed, however, and at the time of Krasheninikov's visit, grain and vegetables were cultivated in quite limited areas of the peninsula, nor did the government's further efforts at the end of the 18th century have much success because of the unfavorable natural conditions, great distances and unwillingness of the farmers to work under new conditions. This paper is based on both published and unpublished materials, which are cited in footnotes.

37199. SAITO, T. A note on the zonal index. (Journal of meteorological research, Tokyo, Mar. 1953. v. 5, no. 3, p. 189-93, illus.) Text in Japanese. Summary in English.

"The author calculates the zonal westerly index (35° N.-55° N.) and the polar easterly index (60° N.-80° N.) during the winters 1951 and 1952 by using the five-day mean of surface pressure. The results obtained are as follows: (1) The "retrograde wave" is clearly identified in the Far East. (2)

The "easterly wave" is also identified and found to have the same speed as the former. (3) The above two are found in the polar easterly index and proceed parallel with each other. (4) It appears that the retrograde wave occurs when the zonal westerly wind is weak, while the easterly wave occurs when it is strong. (5) It follows that weather changes connected with the retrograde wave are different from those connected with the easterly wave."—*Meteorological abstracts & bibliography*, Sept. 1954. v. 5, no. 9, p. 1019. **Copy seen:** DLC; MH-BH.

37200. SAKAI, AKIRA. Ezosansho-uo tamago kareikyaku ni tsuite. (Teion kagaku [Low temperature science], Tokyo, May 1950. v. 5, p. 109-114, 2 fig.) 6 refs. Text in Japanese. Summary in English. **Title tr.:** The effect of supercooling on salamander eggs.

Supercooling of *Hynobius* eggs was not fatal, but its effect varied according to the developmental stage of the eggs treated. Earlier stages of the eggs were more sensitive to supercooling and so was the period of early cleavage; unfertilized eggs, older stages of fertilized ova, and stages after gastrulation were very resistant. Embryos from supercooled eggs were not different from controls. **Copy seen:** DLC.

37201. SAKAI, AKIRA. Sake tamago no kareikyaku ni tsuite (I). (Teion kagaku [Low temperature science], Tokyo, 1951. v. 6, p. 147-57, 11 fig., 2 tables) 2 refs. Text in Japanese. Summary in English. **Title tr.:** On the supercooling of the salmon egg (*Oncorhynchus keta*).

Contains a study on the effects of, and conditions for supercooling these eggs. Some of the conclusions reached: supercooling in itself is not fatal unless the egg proper is frozen; fertilizability of eggs supercooled to -6° C. is normal, but decreases with falling temperature; duration of non-fatal supercooling decreases with lowering of temperature.

The growth rate of various lichens is studied partly on the basis of L. M. Palmer's work in Alaska (incomplete data), that of T. A. Tengwall in Swedish Lapland and Russian botanists in northern regions of the U. S. S. R. The influence of climatic and edaphic factors is noted. The renewal of lichen cover, grazed by reindeer and cattle, or destroyed by fire, is discussed.

Account of a 55-day trip in July-Sept. 1932, from Arkhangel'sk to Cape Chelyuskin and back. The expedition supplied, manned and did some construction for the Soviet polar stations on Sergeya Kameneva Islands (Domashniy Island), Severnaya Zemlya (Cape Sverdlova, 78°46' N. 98°40' E.), Cape Chelyuskin, and Russkaya Gavan' on Novaya Zemlya. Extensive hydrological, hydrobiological, zoological and meteorological observations were carried out as well. The exceptionally favorable ice conditions encountered along the route are noted. cf. *Arctic Bibliography*, No. 15275.

37214. SANDERS, J. O. Polar navigation. (Navigation, June 1952. v. 3, no. 4, p. 104-108)

Polar navigation methods used by the 58th Strategic Reconnaissance Squadron, Eielson Air Force Base, Alaska are described. The Local Hour Angle Computer and the astro-compass, modified to read grid heading instead of true heading, are used for heading checks. Tests conducted on polar flights at 18,000 ft. showed that in the absence of any overcast, undercast or haze, no navigational twilight exists; and more emphasis to magnitude of north declination stars is suggested. The Pfund sky compass is used in the event of navigational twilight. Methods of using the sky compass are outlined. Radar is the only type of navigation used over the Alaska mainland. Doppler double drifts were introduced as a standard operation procedure in 1951. Useful range on the ice pack is limited more by the resolution of the radar set than by atmospheric conditions or power output. A practice of celestial navigation in summer was devised whereby the DR groundspeed is measured off to intersect the LOP and the DR track drawn through the LOP. The MPP is then located half-way between the two intersections of the LOP. The average polar navigation team consists of one desk navigator, one astro-navigator and one radar observer. *Copy seen:* DLC.

Contains a key to the species and descriptions of five species of this group of beetles. *Stenus fraternus*, *S. umbratilis* and *S. vista* n. sp., native to Northwest Territories and Northern Manitoba, are included. *Copy seen:* DSI; MH-Z.

37216. SANDFORD, KENNETH STUART, 1899- . The geology of Isis Point, North-East Land, Spitsbergen. (Geological Society of London. Quarterly journal, 1954. v. 110, pt. 1, p. 11-19, 2 illus., 2 text maps) 9 refs.

Contains results of investigations during the 1949 Oxford University Expedition to North East Land, a sequel to *Arctic Bibliography*, No. 25827. Isispynten (79°40' N. 26°30' E.), a rocky island-promontory, is one of the easternmost outcrops of igneous and metamorphic rocks in Svalbard. The oldest rock group, a metamorphic series of gneisses, schists and amphibolites invaded by gray granite, is cut by dikes and veins of quartz-diorite. The quartz-diorite is, in turn, invaded by aplite and pegmatite assumed to be associated with a pink granodiorite. Rocks of Isispynten, Storøya, and adjacent parts of Nordaustlandet and Kvitøya are logically associated with the Archean basement rocks of the Barents Shelf. Eastward, Upper Carboniferous rocks occur in Viktoriya Ostrov.

37218. SANDSTROM, ARNE ELD, 1905- . On the concentration of heavy water in glacier ice. (Arkiv för fysik, 1952. Bd. 3, häfte 6, p. 549-56, illus., diagr., 3 tables) 4 refs.

Experiments were conducted to determine whether the high concentration of heavy water found in the ice of large Swiss glaciers might also be found in the small glaciers of the mountains of northernmost Sweden. Ice samples were taken from the Kebnepakte glacier, glaciers on the summit of Mt. Kebnekaise (67°53' N. 18°33' E.) Björling glacier, Aka glacier in Sarek National Park, and glaciers on Sjematjokko. Techniques used in studying water from the samples are described in detail. "The values obtained for individual samples are tabulated and show that content of heavy water varies from

one part of the bulk ice to another. Swedish glaciers carry a surplus of heavy water which can be as high as 0.05 percent of the total bulk. No conclusions can be drawn as to where the enrichment actually takes place . . ."—SIPRE.

**37223. SARYCHEV, GAVRIIL ANDRE-
EVICH, 1763-1830.** *Puteshestvie flota Kapitana Sarycheva po sĭeverovostochnoi chasti Sibiri, Ledovitomu moriŭ i Vostochnomu okeanu, v prodolzhenie os'mi iĭet, pri Geograficheskoi i Astronomicheskoi morskoi Ėkspeditsii, byvshel pod nachal'stvom flota Kapitana Billingsa, s 1785 po 1793 god.* Sanktpeterburg, Tip. Shnora, 1802. 2 pt. in 1 v.: xii, 187, 7 p.; 192 p. fold. table, errata list; and atlas (folio): 56, partly fold., plates (18 maps) Text in Russian.

Title tr.: The voyage of Captain Sarychev to the northeastern part of Siberia, the Arctic Sea and Eastern Ocean in the course of eight years, with the Geographical and Astronomical Maritime Expedition under command of Captain Billings in 1785-1793.

Contains a narrative in journal form, Sept. 1785-Aug. 1793, of the Russian Northeastern Expedition, by one of its most energetic and able, though more youthful officers. Under command of Joseph Billings, the 141-man expedition, including Robert Hall, Martin Sauer, the artist Luka Voronin and the physician-naturalist Carl Merck, was sent by Empress Catherine to explore and map the coasts of Chukotka from the Kolyma to East Cape, also the seas and islands of the North Pacific. Sarychev traveled ahead of Billings from St. Petersburg via Yakutsk to Okhotsk, Sept. 1785-Mar. 1786, surveyed nearby forests and started preparing timber for construction of ships. After the arrival of Billings he moved on to Verkhne-Kolymsk, built there two vessels, the *Pallas* and *Asachna*, and in May 1787, with Billings, proceeded down the Kolyma to Nizhne-Kolymsk.

Three attempts were made to sail eastward, but due to unfavorable ice conditions the explorers reached no further

than Baranov Kamen' (Bol'shoy Baranov Cape, 69°47' N. 164°24' E.), and returned to Yakutsk. In 1788, Sarychev went again to Okhotsk and made a trip along the seacoast. In 1789, the expedition on the *Slava Rossii* sailed from Okhotsk to Kamchatka, on the way discovered Iony Island (pt. 1, p. 157-59), wintered in Petropavlovsk, and during May-Oct. 1790 made a voyage to the Aleutian Islands, Unalaska, Kodiak, Chugach Bay (Prince William Sound) and return. After a second wintering in Petropavlovsk, another voyage was made via Bering Island to Unalaska and thence northward to St. Lawrence Island, Bering Strait and Lavrentiya Bay (65°40' N. 171° W.) on the Chukotsk Peninsula. Here, in Aug. 1791, Billings left the expedition for an overland trip to Nizhne-Kolymsk, while the *Slava Rossii*, under Sarychev's command sailed to Unalaska, where the party of Captain Hall on the *Chernyi Orel* was met. The expedition wintered in Unalaska; the following summer (Apr.-Aug.) it returned via Petropavlovsk to Okhotsk, and in 1793, it was terminated.

The unknown or little known places, among them the region of Nizhne-Kolymsk, Zashiversk, Yudoma Krestovskaya, Petropavlovsk, Unalaska (pt. 2, p. 151-70, etc.) Lavrentiya Bay, are described as to their physical characteristics, flora, fauna and population: Yakuts, Tungus, Yukaghirs, Kamchadals, Koryaks, Aleuts, Chukchis. In this detailed chronological record of the journeys and voyages, the hardships (e. g. of the wintering on Unalaska) are stressed and the author's geographic, hydrographic and oceanographic observations and his mapping activities are noted. Statistical data are given (fold. tables in pt. 2, p. 174) on the population, and on the pelts collected as taxes (*āsak*) in 56 populated places, 14 of them in Unalaska, the others in the Fox and Andreanof Islands. The imperial "ukaz" ordering the expedition, and the roster of its participants (pt. 1, p. 1-13) introduce the narrative. *Atlas* includes 25 plates depicting sites, native types, their costumes, ornamentation, Aleut masks, Yakut shaman, sledges, dwellings, etc.; also 13 profiles and 18 maps and plans, result of the author's cartographic work; fold. map at the end shows routes of expedition.

Billings' overland trip through Chukotka in Aug. 1791 and Robert Hall's

voyage on the *Chernyi Orel* in 1791 are recounted in Sarychev's *Puteshestvie Kapitana Billingsa*, 1811 (*infra*). Another though less informative narrative of this expedition was published (in English) by Martin Sauer, q. v. The natural history and ethnographic observations of Dr. Merck are also in print (*Arctic Bibliography*, No. 17105, 29842). But the commander, Joseph Billings, an English sailor and veteran of Cook's third expedition 1776-1780, evidently published no account. Sarychev's account was reprinted in 1952 (No. 37225).

Copy seen: DLC

37224. SARYCHEV, GAVRIIL ANDREEVICH, 1763-1830. *Puteshestvie Kapitana Billingsa cherez chukotskuiu zemliu ot Beringova proliva do Nizhnekolymnskogo estrova, i plavanie Kapitana Galla na sudne Chernom Orle po Severovostochnomu Okeanu v 1791 godu.* Sanktpeterburg, Morskaiia tipografiia, 1811. iv, 191 p. fold plates, fold. maps. Text in Russian. **Title tr.:** The journey of Captain Billings through Chukchi Land from Bering Strait to Fort Nizhne-Kolymsk, and the voyage of Captain Hall on the *Chernyi Orel* in the Northeastern Ocean in 1791.

Contains accounts of two side-trips in the Northeastern Expedition of 1785-1793. The first account (p. 1-68) deals with the trip of the expedition commander Captain J. Billings, who left ship (*Slava Rossii*) at Lavrentiya Guba and at the head of a ten-man party, aided by Chukchis, traveled by reindeer sledge along the northern coast of Chukotka to Nizhne-Kolymsk, Aug. 1791-Feb. 1792. This trip is described (p. 1-59) on the basis of Billings' journal and diaries of other members of his party. A description of Chukotka is added (p. 60-68) and three plates at the end of the volume. Notes on Chukchis (their encampments, winter and summer dwellings, festivals and sacrifices, reindeer-sledge driving, weapons, etc.) are scattered through the text.

The second account (p. 69-90) deals with Capt. Robert Hall's attempt to join the *Slava Rossii* with a cutter, the *Chernyi Orel*, built on Billings' order at Nizhne-Kamchatsk. Hall left Kamchatka in June 1791, sailed to Unalaska, thence to Bering Strait, Lavrentiya Guba and back to Unalaska, where he finally caught up with the *Slava Rossii*,

with Sarychev now in command (Billings traversing Chukotka). This brief narrative is based on Hall's logbook and other unpublished materials.

Appended are: (1) brief vocabularies, with Russian equivalents (p. 91-129) of twelve dialects of natives in areas visited by expedition in 1786-1792 (Yakuts, Tungus, Lamuts, Yukaghirs, settled and nomadic Chukchis, reindeer Koryaks, three Kamchadal and three Aleut dialects); (2) meteorological data registered in Verkhne-Kolymsk, Oct. 1786-Apr. 1787 (air temperature, wind, cloudiness, p. 134-42); (3) full text of instructions given to expedition. *Fold map* shows the routes of Billings' Chukotka trip and of Hall's voyage (northern part). This book may be regarded as supplemental to the author's *Puteshestvie*, 1802, q. v., from which all its illustrations and two maps are reprinted. A modern (1952) edition was published as p. 251-94 in item following. **Copy seen:** DLC.

37225. SARYCHEV, GAVRIIL ANDREEVICH, 1763-1830. *Puteshestvie po severo-vostochnoi chasti Sibiri, Ledovitomu moru i Vostochnomu okeanu.* [Pod. red. N. N. Zubova] Moskva, Gos. izd-vo geogr. lit-ry, 1952. 325 p. illus., fold. map in pocket. Text in Russian. **Title tr.:** Expedition to the northeastern part of Siberia, the Arctic Sea and the Eastern Ocean [N. N. Zubov editor].

New edition of Sarychev's two works, with (p. 3-21) an introductory biographical sketch of him by the editor. This traces Sarychev's education, training and his activities in the expedition of 1785-1793. The nominal head of expedition, Joseph Billings, formerly a sailor on Cook's last expedition, is criticized, and the part played by Sarychev extolled. His subsequent career in the Russian Navy is outlined, with tribute to his merits as a tireless traveler, courageous navigator, and keen observer, and to his achievements as cartographer, hydrographer and oceanographer. His publications (five including the two following) are appraised.

Puteshestvie flota kapitana Sarycheva, etc. (Voyage of Captain Sarychev, etc., p. 22-229) is slightly abridged from the 1802 edition, q. v. A few illustrations from the atlas are reduced in size and interpolated in the text, but most of the illustrations and all maps, but that of the itineraries are omitted.

Puteshestvie kapitana Billingsa cherez Chukotskiū zemlū, etc. (Journey of Captain Billings through Chukchi Land, etc., p. 251-94) has the text of the 1811 edition abridged, but lacks the supplementary vocabularies, meteorological data and all illustrations and maps.

Appended (p. 295-311) are the editor's notes to the text of Sarychev's two works, a glossary of marine terms (p. 312-13), and (p. 314-25) an index of geographical names.

B, v. 6, no. 1-2, p. 113-27, tables, graphs) 14 refs. Text in German. Summary in German, English and French. *Title tr.:* On the radiation balance of the oceans in the Northern Hemisphere.

The radiation balance of the oceans of the Northern Hemisphere is estimated on the basis of available results. Short wave solar, sky and global radiation are

related to sunshine duration in various months. Albedo of the water surface is discussed for different solar heights and the short wave radiation balance is tabulated. Short and long wave radiation balances are shown for Pacific and Atlantic Oceans (0°-70° N. lat.) for June and Dec. and the total radiation balance for Mar., June, Sept. and Dec. The influence of latitude predominates in winter, that of cloudiness in summer.

37228. SAUER, MARTIN. An account of a Geographical and Astronomical expedition to the northern parts of Russia, for ascertaining the degrees of latitude and longitude of the mouth of the river Kovima; of the whole coast of the Tshutski, to East Cape; and of the islands in the Eastern Ocean, stretching to the American coast, performed . . . by Commodore Joseph Billings, in the years 1785, &c to 1794. The whole narrated from original papers by Martin Sauer, secretary to the expedition. London, T. Cadell, Jun., 1802. xxvi p., 1 l., 332, 58 p. 14 plates, fold. map.

A narrative of the Russian Northeastern Expedition, 1785-1793, also chronicled by G. A. Sarychev (q. v.). Sauer's account is based in part on his copy of mariners' journals, and he is unsure, he states, of the bearings, distances, etc., cited. Secretary and interpreter of the expedition, he recounts the journey with Billings from St. Petersburg to Yakutsk and Okhotsk, the trip to Nizhne-Kolymsk, unsuccessful attempts to sail eastward from the Kolyma in 1787, and voyages on the *Slava Rossii* from Okhotsk to Kamchatka, the Aleutian Islands, Alaska and Chukotka in 1789-1792. The events of the expedition are described, and hardships suffered by its members, especially during the wintering on Unalaska 1791-92, when three-quarters of the crew were stricken with scurvy, are stressed. Billings' traverse of Chukotka in Aug. 1791 from Lavrentiya Guba to Nizhne Kolymsk is noted. The achievements of Billings, Sarychev, Hall and others and their relations with each other are noted. The places visited: Yakutsk, Okhotsk, Verkhne-Kolymsk, Nizhne-Kolymsk, Zashiversk, Petropavlovsk, Unalaska, Kodiak, Prince William Sound, Pribilof Islands, Cape Rodney, Lavrentiya Bay are described, as well as their native inhabitants: Tungus, Yakuts, Chukchis, Yukaghirs, Kamchadals, Aleuts. Engraved illus. of several sites

(Okhotsk, Zashiversk, hot spring in Kamchatka, etc.), native types, their clothing, dwellings, implements, etc., profiles of several Aleutian Islands, are included, also fold. map showing routes of the *Pallas* eastward from the Kolyma, and of the *Slava Rossii* in 1791 (northward only).

Appended are: (1) vocabularies: about two hundred English words with equivalents, in the Yukaghir, Yakut, Tungus languages; and (2) in those of the inhabitants of Kamchatka, the Aleutians and Kodiak Island; (3) a list of stages from St. Petersburg to Yakutsk as traveled by the expedition, with distances and dates (p. 15-26); (4) pay of expeditionary personnel, and (5) translation of the text of instructions given to expedition. Glossary of Russian terms, p. xv-xvi.

Voyage fait . . . dans le nord de la Russie Asiatique, dans la Mer Glaciale, dans la Mer d'Anadyr, et sur les côtes de l'Amérique, depuis 1785 jusqu'en 1794, par le Commandeur Billings, rédigé par M. Sauer et traduit de l'Anglais avec des notes, par J. Castéra. Paris, F. Buisson, 1802. 2 v.: xxiv, 385 p.; 417 p. Text in French. **Title tr.:** Journey in northern Asiatic Russia, the Arctic Sea, Sea of Anadyr' and along the coasts of America made from 1785 to 1794 by Commodore Billings; compiled by M. Sauer and translated from English with notes by J. Castéra.

French translation of the item above, with omission of all plates and maps, and addition of footnotes, meteorological data for Verkhne-Kolymsk in Nov. 1786 (temperature and wind, v. 2, p. 253-55), also an index. Native vocabularies have French equivalents. **Copy seen:** DLC.

37230. SAUNDERS, HOWARD. On the birds exhibited in the International Fisheries Exhibition. (Ibis, July, 1883. ser. 5, v. 1, no. 3, p. 346-52)

Deals chiefly with birds from the *Vega* Expedition of N. A. E. Nordenskiöld, collected during the wintering 1878-79, near Pitlekay on Chukotsk Peninsula. Critical notes are given on various northern species, ptarmigan, ivory gull, king eider, Pacific eider, etc., also data on their geographic distribution in the U.S.S.R. and Alaska. **Copy seen:** DSI; MH-Z.

37231. SAUNDERS, LESLIE GALE, 1895- . Some marine insects of the

Pacific coast of Canada. (Entomological Society of America. Annals, Dec. 1928. v. 21, no. 4, p. 521-45, illus.) 13 refs.

Includes a first description of the early stages of *Paraclunio alaskensis*, found in the neighborhood of the Biological Station in Departure Bay, Nanaimo, Vancouver Island during the summer of 1927. This species was originally described by D. W. Coquillett from Yakutat, Alaska.

37232. SAUNDERS, R. A., and W. J. MacLEAN. Shoran operations in Canada: pt. 1, shoran survey operational organization; pt. 2, shoran geodetic operations. (Canadian surveyor, Oct. 1953. v. 11, no. 6, p. 13-21, diags., graphs)

No. 8 Detachment of 408 Squadron, Royal Canadian Air Force, has been employed on the shoran project since its beginning. Operational planning, limitations of shoran, and installation of ground stations are described. General principles involved in shoran and changes in techniques and procedure are also discussed with reference to the network in the Canadian Arctic. In 1952 it was extended from the Churchill-Coppermine line eastward across the Barren Grounds to the western tip of Baffin Island and Ungava. Plans for 1953 include linking east and west network and preparing stations to bridge gap between existing shoran and Alaska boundary.

37249. SCHATZ, ALBERT, 1920- , and others. Chelation (sequestration) as a biological weathering factor in pedogenesis. (Pennsylvania Academy of Science. Proceedings, 1954. v. 28, p. 44-51, table) 27 refs. Other authors: N. D. Cheronis, V. Schatz, and G. S. Trelawny.

Chelation or metal-binding appears to be most important in biological weathering of rocks and minerals. "The chelation reaction is shown to occur under conditions where acid hydrolysis is unlikely and may be useful in attempts to expand Arctic agriculture. These results are discussed in terms of the pedogenic action of lichens as unique biological

weathering agents. This activity of lichens is derived from the interaction between the conditions of their environment and the nature of their intermediary metabolism which results."—From author's abstract.

37251. SCHEFFER, VICTOR BLANCHARD, 1906- , and K. W. KENYON. The fur seal herd comes of age. Every year a million mighty swimmers and a half a million young bring drama to the lonely Pribilofs. (National geographic magazine, Apr. 1952. v. 101, no. 4, p. 491-512, 19 illus. (10 col.), text map)

Contains a popular account of seal breeding and feeding habits, seal pups, diseases and natural enemies, southern migration, size of population, tagging the pups, and description of rounding up and killing the three-year-old seals for the pelts.

Copy seen: DLC.

37252. SCHEFFER, VICTOR BLANCHARD, 1906- . Measurements and stomach contents of eleven dolphins from the northeast Pacific. (Murrelet, May-Aug. 1953. v. 34, no. 2, p. 27-30, illus.) 6 refs.

Contains a report on size, weight and stomach contents of 11 animals belonging to three species and collected during 1950-52 between southern California and the Pribilof Islands. A rather rare dolphin, *Stenella styx*, is also described. Stomach contents were almost exclusively composed of cephalopods and fish.

Copy seen: DSI.

37253. SCHEFFER, VICTOR BLANCHARD, 1906-, and **F. WILKE.** Relative growth in the northern fur seal. (Growth, Sept. 1953. v. 17, no. 3, p. 129-45, illus. tables) 4 refs.

Contains a study of the growth of *Callorhinus ursinus*, L. as indicated by weight and length, hind flipper length, and skull length and width. Freshly-killed specimens were measured; also new-born young, and marked, known-age animals. Most measurements were made on St. Paul Island in the Pribilofs, some near Sitka, Southeast Alaska, and near Honshu, Japan. The data are of practical value for the Alaskan fur seal industry. **Copy seen:** DSG.

37254. SCHELL, IRVING ISRAEL, 1906-. Interrelations of arctic ice with the ocean and the atmosphere in the North Atlantic-Arctic and adjacent areas. Woods Hole, Mass., Sept. 1954. 22 p. map, tables. (Woods Hole, Mass. Oceanographic Institution. Technical report, reference no. 54-72) Submitted to Geophysics Branch, Office of Naval Research under contract N6onr-27701 (NR-083-004) Unpublished manuscript. 22 refs.

"A comparison was made of the mean April-Aug. sea ice limit of the Greenland and Barents Seas with the contemporary and following season's air temperature and precipitation of Iceland and the decadal variations in the arctic ice with the corresponding variations in the sea surface temperature, precipitation and storminess in that general area. The results indicate the arctic ice during April-Aug. to be a substantial measure of the following Sept.-Feb. sea surface temperature off the E. coast of Iceland and the Faroes, and of Iceland's Sept.-Feb. air temperature, and that the decadal variations in the ice are a measure of the decadal ocean and weather trends in the northern N. Atlantic and adjacent areas."—SIPRE. **Copy seen:** DN-HO.

37255. SCHENK, ERWIN. Solifluktion. (Deutsche Geologische Gesellschaft. Zeitschrift, 1953, pub. 1954. Bd. 105, Teil 2, p. 197-202) 20 refs. Text in German. **Title tr.:** Solifluction.

Contains survey of the various concepts and definitions of the term solifluction

and their development since about 1910 with reference to the literature. Author gives his own definition, with a brief discussion of permafrost and frozen ground. **Copy seen:** DGS.

SCHERER, JEAN BENOIT, 1741-, see Steller, G. W. G. W. Steller's . . . Beschreibung . . . Kamtschatka . . . 1774. No. 37600.

37256. SCHERER, WILLIAM F., and C. HOOGASIAN. Preservation at sub-zero temperatures of mouse fibroblasts (strain L) and human epithelial cells (strain HeLa). (Society for Experimental Biology and Medicine. Proceedings, Nov. 1954. v. 87, no. 2, p. 480-87, tables) 18 refs.

These cells have been preserved successfully for six and seven months at temperatures of -60° to -70° C. Glycerol added to the suspending liquid greatly increased the percentage of surviving cells, no significant difference having been observed whether this liquid was balanced salt solution, serum or a solution for maintenance of animal cells (MS). Both types of cells showed better preservation at -60° to -70° C. than at -20° C., and from thawing in one to two minutes than in 30 to 60 minutes. Differences due to other suspending fluids and freezing times, are also discussed. **Copy seen:** DSG.

37257. SCHERR, GEORGE H. The effect of cortisone on the course of systematic moniliasis in mice, 2; an attempt to reverse the toxic effect of cortisone with the lowered environmental temperature or somatotrophic hormone (STH). (Mycopathologia et mycologia applicata, 1953. v. 6, fasc. 4, p. 337-53, illus., tables) 14 refs.

Mice previously infected with moniliasis could not be protected from lethal effects of cold by using cortisone. However, severity of infection, sex, amount and dosage schedule of cortisone or STH, environmental temperature, etc. had an interrelated effect on the rate of survival. **Copy seen:** DSG.

tures of man and woman different; is there a difference between day and night?

Contains a report based on 10,000 measurements. In contrast to the even rectal temperature, skin temperature shows ups and downs, independent of the pulse rate. Its course is independent of body temperature and always below it. During the day man's skin temperature is 0.8° C. above woman's; it drops during the night, whilst that of the female apparently remains constant or rises slightly.

Purpose of this phase of the Katmai Project was to determine species occurrence, distribution, and general ecology of the mammals of Katmai National Monument, as part of the general study

of Alaskan mammals and animal-borne diseases. During summer 1953, data were obtained on occurrence and distribution by collecting in as many localities and habitats as possible. All specimens were autopsied, and skin and skulls were prepared for study. Comprehensive studies were made in five localities. Scientific results will be given in later detailed report. Recommendations are made for conservation of the animals in the Monument.

37266. SCHMIDT, WILHELM, 1868-1954. Der Ursprung der Gottesidee; eine historisch-kritische und positive Studie. Münster i. W., Aschendorfsche Verlagbuchhandlung, 1926-1952. 10 v. Text in German. **Title tr.:** The origin of the idea of God; an historico-critical and positive study.

An investigation of religious beliefs among the most primitive peoples with special attention to belief in a Supreme Being, its cult and influence on their morals and ethics. This extensive work is intended to prove the thesis of "primitive monotheism." Based substantially on literature, it has a review of the most important printed works and sometimes manuscripts at the beginning of each chapter, also various appendixes, etc., and general summaries or evaluations of the material presented. The religions of the so-called Arctic cultural cycle are summarized in v. 3 (1931) p. 541-64. In v. 6. (1935) p. 21-367, the relations between culture and mythology of the so-called Arctic-North American cultural group are discussed among those of other Indian groups. Considerable attention is paid to the religion of Samoyeds (v. 3, p. 240-84; v. 5, p. 805-836; v. 7, p. 609-701), and Tungus-Manchu (v. 5, p. 888-895; v. 10, p. 503-674). Includes also chapters on the religion of the Caribou Eskimos (v. 3, p. 493-526; v. 6, p. 560-564), Koryaks (v. 3, p. 386-426), Cree

and Montagnais Indians of the James Bay region (v. 6, p. 511-42; v. 7, p. 726-760).

37267. SCHMIDT-NIELSEN, BODIL and R. PH. FORSTER. Environmental factors and renal function in the frog, *Rana catesbiana*. (Federation proceedings Mar. 1953. v. 12, no. 1, pt. 1, p. 127)

Bull frogs suddenly cooled to 2°-5° C. submerged, stopped respiratory movements and remained motionless. No urine was formed in the first 12-18 hours and body weight increased due to water uptake through the skin. After this period the animals rose to the surface, urine formation and glomerular filtration were reduced and the tubular water reabsorption was low.

Contains an account on perniosis, erythrocyanosis and other mild cold injuries, their pathology, therapy and prevention; also notes on frostbite and hypothermia and their therapy.

Copy seen: DSG.

37270. SCHNELL, IVAR, 1904- . Prehistoric finds from the island world of the Far East, now preserved in the Museum of Far Eastern Antiquities, Stockholm. (Stockholm. Östasiatiska samlingarna. The Museum of Far Eastern Antiquities. Bulletin, 1932, no. 4, p. 15-104, text illus. incl. maps, 17 plates) 56 refs.

Includes description of artifacts brought home by the Swedish expedition to Kamchatka in 1920-1922 (p. 59-65, plates xv-xvii). Three neolithic sites were investigated and about 150 artifacts secured: pottery, stone axes and chisels, arrow-heads, knives, scrapers, lamps and implements of bone. These finds are compared with those of V. I. Jochelson in 1910-1911 (cf. *Arctic Bibliography*, No. 8129) and the character and origin of Kamchatka pottery is discussed.

Copy seen: DSI.

37271. SCHOEPFLE, GORDON MARCUS, 1915- , and J. ERLANGER. The action of temperature on the excitability, spike height and configuration, and the refractory period observed in the responses of single medullated nerve fibers. (*American journal of physiology*, 1941. v. 134, p. 694-704, illus., tables) 11 refs.

Cold was found to increase the current strength required to stimulate; it prolongs both ascent and descent of the spike, but the descent much more, and increases the height of the spike. The fibers studied were of the frog.

37272. SCHOLANDER, PER FREDRIK, 1905- , and others. Climatic adaptation in arctic and tropical poikilotherms. (*Physiological zoology*, Jan. 1953. v. 26, no. 1, p. 67-92, 11 fig., 9 tables) 63 refs. *Other authors:* W. Flagg, V. Walters, and L. Irving.

Contains a study on O₂ consumption in fishes, crustaceans, molluscs, insects and spiders; temperature tolerance; locomotor activity, etc. A "very considerable, although not complete, metabolic adaptation in the arctic forms relative to the tropic forms" was found. This adaptation was most pronounced in aquatic forms. Adaptations to seasonal changes; microclimate, etc., are also discussed.

Experimental work, carried on at Arctic Research Laboratory, Point Barrow, Alaska and other stations, was supported by the U. S. Office of Naval Research.

Copy seen: DLC.

37273. SCHOLANDER, PER FREDRIK, 1905- , and others. Respiration in some arctic and tropical lichens in relation to temperature. (*American journal of botany*, Dec. 1952. v. 39, no. 10, p. 707-713, 5 fig., table) 19 refs. *Other authors:* W. Flagg, V. Walters, and L. Irving.

Contains records of oxygen consumption in 19 arctic and ten tropical species at graded temperatures. Only the arctic members of the families Peltigeraceae and Stictaceae respired faster at all temperatures than the tropical members and "may be metabolically adapted to cold." The metabolic rate in a lichen was in general highly variable depending largely on its water content and temperature. Experimental work was carried on at the Arctic Research Laboratory, Point Barrow, Alaska."

37274. SCHOLZ, JOACHIM. Polarlicht-untersuchungen auf Franz-Josephs-Land. (*Beiträge zur Geophysik*, 1935. Bd. 44, Heft 2, p. 145-56, illus.) Text in German. *Title tr.:* Auroral investigations at Franz Josef Land.

"A long series of measurements at two-minute intervals was obtained on two nights, when there was a cloudless sky and a calm, of the potential gradient, air-earth current and appearance of the aurora, and the individual values are tabulated. The potential gradient and current decrease 25 to 50 percent a short time before and during the occurrence of visible aurora, while with colored aurora the current may even be reversed. These changes were much greater than incidental seasonal changes. They are ascribed to the negative corpuscular stream which forms the aurora. As, however, the Heaviside layer serves as the outer conductor for the earth as a condenser this would produce a decreased potential gradient. The author therefore considers that the auroral stream contains positrons and electrons and the earlier arrival of the former causes the increased potential gradient. The different potential of the Heaviside layer on the sides near to, and away from, the corpuscular stream also plays a part."—*Meteorological abstracts & bibliography*. Contains remarks on D. Davydov's *Jakutisches Wortregister*, 1843, q. v. The lexical, phonetical and grammatical aspects of the Yakut language are considered. **Copy seen:** DLC.

37278. SCHOVE, D. JUSTIN. Summer temperatures and tree-rings in North-Scandinavia, A. D. 1461-1950. (Geografiska annaler, 1954. Årg. 36, häfte 1-2, p. 40-80, 2 text maps, graphs, 2 tables) 63 refs.

The general relation of tree growth to summer temperatures in cold areas is reviewed, and comparison is made between northern Scandinavia and western Alaska. The three regions considered here are northern Sweden, northern Norway, and Trøndelag (northwest Norway). Limitations in dendrochronology are listed, and the mean growth and weighted growth as indices of summer temperatures are discussed. Tree growth indices for pine and spruce are set out in

tables for every year 1461-1949. Relationship between tree-rings and the barometric pattern, and parallelism of tree-ring and crop variations are noted. A chronology is offered, showing for selected years between 1405 and 1953, the general temperature, rainfall, and crop conditions in Scandinavia and the rest of Europe. Future research in tree-ring analysis is outlined. **Copy seen:** DGS.

Buenos Aires, Deutscher Verlag "El Buen Libro," 1950. 190 p. 19 illus. on plates (part. col.), diagr., map on end papers. Text in German. **Title tr.:** Meteorological reconnaissance flyers in the Arctic; war experience of Flight Lieutenant Rudolf Schütze. Revised and edited by Werner Schwerdtfeger.

Journal of a Luftwaffe officer attached to a meteorological reconnaissance unit in the Arctic from 1940 to 1943, when he was killed in a crash on a leave-flight to Germany. Arctic and North Sea phenomena are described as observed on flights from Norway to the Faeroes, Iceland, East Greenland, Jan Mayen, Spitsbergen, and Novaya Zemlya. The northern landscape is vividly portrayed in text, also in photographs of landforms and specific features. Flights through a warm front, a severe thunderstorm, showers, cloud formations and stratification are reported, and a description given of the aurora borealis. **Copy seen:** DLC.

37281. SCHULMAN, EDMUND, 1908- Tree-rings and climatic changes in western North America. Tucson, Uni-

versity of Arizona, June 20, 1953. 138 p. 28 illus., 89 tables. Mimeographed. (Arizona. University. Contract NR089-020, Final report) refs.

"Charts are presented in *extenso* for results of 314,000 tree rings measured in most of the major drainage basins of the western U. S. A., S.W. Canada, and Alaska . . . Sites are described in detail, and species of trees, method of measurement (to .01 mm.), location of sample sites (tabulated), cross indexing, remarks on extremely long records (old trees) and dates of extremely large and small rings are included . . . The tree ring width is taken to be an indicator of rainfall (or drought) in the arid SW and of temperature in Alaska."—*Meteorological abstracts & bibliography*, Mar. 1954, v. 5, no. 3, p. 305-306.

37285. SCHUSTER, ROBERT L. Travel and rescue in crevassed areas. Wilmette, Ill., May 1954. 14 p. 10 illus., diagrs. (U. S. Army. Corps of Engineers. Snow, Ice, Permafrost Research Establishment. SIPRE instruction manual 2)

Contains simple instructions intended for study prior to travel on glaciers. Transverse, longitudinal, and marginal crevasses are briefly described. The danger of hidden, snow-covered crevasses in arctic areas even in late summer is stressed. Precautions necessary in foot and vehicle travel are outlined. Preparations for rescue and rescue methods are described: with single rope; with karabiner and spare rope; double stirrup method; self-rescue by Prusik method; rescue of unroped man; and rescue of party in fallen vehicle. Rescue equipment is listed.

37286. SCHWARZ, HARVEY. Deetra and Delrac long range navigation aids. (*Navigation, Sept. 1954. v. 4, no. 3, p. 129-36, 3 text fig.*)

Propagation limitations of the Deetra and Delrac systems are discussed by the managing director, Decca Navigator Co. Ltd., London, England. Delrac is believed to be the only completely satisfactory solution to the Long Range Area Coverage problem. Deetra is suitable only for craft operating in the general direction of, or away from, a pair of stations. Deetra is considered ideal for North and South Atlantic air routes. A mean frequency of about 12

kilocycles was chosen for Delrac, and it will provide a minimum accuracy of 10 nautical miles with some 14 pairs of stations.

Copy seen: DSG.

37288. SCIENCE. International Geophysical Year Program. (Science, Apr. 9, 1954. v. 119, no. 3093, p. 437)

The First and Second International Polar Years 1882-83, 1932-33, and their main achievements are noted. The greater scope, intensity and geographic coverage of the international effort proposed for 1957-58 is stressed. Fields of study are: solar activity, longitude and latitude determinations, glaciology, oceanography, meteorology, geomagnetism, aurora and airglow, ionospheric physics, cosmic rays, and upper atmosphere. Arctic, Antarctic, and major land and sea masses of the earth are included in the program, in which 28 countries have indicated participation. International organization and the U. S. national officers for the Year are presented. The

fields of activity will be increased from the previous three or four to ten.

lozemel'skaya tundras for study of the
reindeer pastures.

Preliminary report on the work, July-
Oct. 1931, of the expedition, headed by
F. N. Sambuk; the deployment of five
parties, methods of work and its difficul-
ties are noted. **Copy seen:** DLC.

37298. SDOBNIKOV, V. M. K predpo-
lagaemol organizatsii nauchno-issledo-
vatel'skoi tundrovof stantsii Vsesoiuznogo

arkticheskogo instituta v Nenetskom
okruge. (Leningrad. Arkticheskii . . .
institut. Brülleten', 1932. v. 2, no. 11-
12, p. 267-68) Text in Russian. **Title
tr.:** The proposed organization of a
tundra research station of the All-Union
Arctic Institute in the Nenetskiy District.

The expedition of the Arctic Institute
to the lower Pechora River basin, 1932,
reached the conclusion that a station for
fostering agriculture and horticulture in
the area ought to be organized; plans for
such work were outlined and the idea
found support of a special conference of
workers in the district.

37299. SDOBNIKOV, V. M. Po ark-
ticheskoi tundre; ocherki naturalista.
Moskva, Gos. izd-vo geogr. lit-ry, 1953.
127 p. illus., 4 plates. Text in Russian.
Title tr.: In the arctic tundra; essays
of a naturalist.

Sketches of nature and wildlife in the
Soviet far North, based on author's
observations during 20 years' work and
travel in the Ural, Pechora, Yamal and
Taymyr. The vast tundra spaces, their
seasonal changes, mountains, lakes and
rivers are described. The fauna is
treated in detail: wild reindeer and
hunting of them, their enemy the wolf
(p. 39-66); lemmings, the arctic hare and
its unusual abundance in 1943, polar
bear, fox, brown bear; such birds as
loon, goose, skua, snow bunting, snipe,
snowy owl, ptarmigan, crow; insects.
Ecological comment is made throughout
the text and the interaction of tundra
fauna discussed in the last chapter (p.
119-27). Phot.-illus. of landscape and
wildlife are included as well as anecdotes
of author's adventures.

**37300. SEARLE, HARRIET (RICHARD-
SON).** Contributions to the natural
history of the Isopoda, I-VI. (U. S.
National Museum. Proceedings, Jan.
19, 1904, v. 27, no. 1350, p. 1-89, illus.;
(V-VI) Apr. 18, 1904, v. 27, no. 1369,
p. 657-81) 118 refs.

Contains in the introductory part (p.
2-31), data on classification and sys-
tematic position of isopod crustaceans,
their external and internal morphology,
development, habitats, habits, mode of
life, bathymetric and geographic dis-
tribution, secondary sexual characteristics,
alteration of sex and hermaphroditism.
Parts I-IV (p. 32-89) list Isopoda col-
lected in various regions by the steamers

Albatross and *Palos*, including 26 North American species of *Epicaridea* (ten are described as new), with descriptions, synonyms, hosts (fishes) and localities. Some species of circumpolar distribution are included. Pt. V (p. 657-71) contains 20 species of the Northwest Coast, and five are described as new. At least six species native to Bering Sea, Aleutian Islands and southeastern Alaska waters, are included. References are listed at the beginning of each part.

Copy seen: DSI; MH-Z.

37301. SEARLE, HARRIET (RICHARDSON). Key to the isopods of the Atlantic coast of North America, with descriptions of new and little known species. (U. S. National Museum. Proceedings, Feb. 28, 1901. v. 23, no. 1222, p. 493-579, illus.)

Contains a list of tribes, families, genera and 188 species, with analytical keys. A systematic list of species is given, with synonyms, descriptions of 14 new ones, and data on habitat and distribution. At least 30 of the species are native to Baffin Bay-Davis Strait, Hudson Bay and Labrador Sea. Distribution in other seas (Greenland, Barents, Kara) is also included.

Copy seen: DSI; MH-Z.

37302. SEARLE, HARRIET (RICHARDSON). Key to the isopods of the Pacific coast of North America, with descriptions of twenty-two new species. (U. S. National Museum. Proceedings, June 5, 1899. v. 21, no. 1175, p. 815-69, illus.)

Contains a systematic list of tribes, families, genera and species, keys, and an enumeration of 97 species (in 44 genera and 16 families). Descriptions, synonyms, critical notes, data on distribution on the Pacific coast and in other waters are given. At least 25 of these isopods, including five described as new, are native to the Bering Sea, Aleutian waters and Gulf of Alaska.

SEBEOK, THOMAS A., see Grundström, H. Lulelaspisk ordbok. 1946-52. No. 35067.

37303. SEDOV, V. P., and P. F. SHVE-TSOV. Cherez polius kholoda v oblast' gigantskikh tarynov. (Nasha strana, Mar.-May 1940. no. 3, p. 24-27, 7 illus.; no. 4-5, p. 41-45, 5 illus., text map) Text in Russian. **Title tr.:** Across the cold pole to the region of gigantic ice fields.

Contains popular account of the Academy of Sciences' Yakut Expedition Mar.-Aug. 1939 to study naleds (iceings), in Yakutia, at the confluence of the Kyurel'kyana and Dogdo Rivers, and the largest naled on the River Kyra, the region studied by Mafdel, 1866-70. Ground waters were found to have a temperature of 0.4° C. due to presence of nitrogen gas, and these waters penetrated the thick ice cover to the surface. The mountain range of Tas-Khayakhtakh and its peak At-Khaya were traversed. The Yakut village Tabalakh and other *naslegs* visited en route, and a group of nomadizing Tungus at the Dogdo and Kyra Rivers (about 40 families, living from hunting and fishing) are noted. The party's itinerary was: from Never on the Siberian railway via Yakutsk to Segenkele (300 km. north of Yakutsk) by truck, thence by horse sledge to Alysardakh, and automobile to Verkhoyansk (three days' travel); from Verkhoyansk to the region of *naleds*, reindeer sledges were used. The return trip was made by airplane via Ége-Khaya (67° N. 134° E.), Ust'-Yansk, Bulun, Yakutsk and Irkutsk. Verkhoyansk, termed here the coldest spot in Siberia (-69.8° C. once recorded), had in 1939, 18 wooden houses and 80 Yakut tents. Ége-Khaya had more inhabitants than Verkhoyansk, and air communication with Yakutsk (the aircraft landing on a lake).

37304. SEDOV, V. P., and P. F. SHVE-TSOV. Podzemnye vody i naledi v severnoi Yakutii. (Nauka i zhizn', 1940. no. 2, p. 16-18, illus.) Text in Russian. **Title tr.:** Ground waters and naleds in northern Yakutia.

Notes on a naled about 20 sq. km. in area in the Kyra River valley 500 km. northeast of Verkhoyansk, at 67°45' N. 140°30' E.; it was studied in 1939 by a special hydrographic party sent out by the Academy of Sciences. The conclusion was reached that this accumulation of ice is caused by action of ground waters and that the study of such phenomena may open new ways for solving the difficult problem of the water supply in Yakutia. Author's scientific paper on this is: *Arctic Bibliography*, No. 16062.

Areal, 1952. vyp. 1, p. 36-41, maps 36-39) 37 refs. Text in Russian. **Title tr.:** The analysis of the range of a collective species, *Arenaria graminifolia* Schrad.

Contains synonyms and data on systematics of a collective species, *Arenaria graminifolia* divided in four species and two subspecies, followed by discussion of the extent, limits and the development of their areas. *A. stenophila* and *A. s. polaris* occurring in the Arkhangel'sk province (Pechora River) and in northern Siberia (from the Ob' to the Lena River) are included; their range is shown on map 39 (scale 1000 km.: 1 cm.).

Copy seen: DLC; MH-A.

37310. SELLERS, EDWARD ALEXANDER, 1916- , and R. W. YOU. Effects of cold environment on deposition of fat in the liver in choline deficiency. (Biochemical journal, 1952. v. 51, p. 573-76, illus. tables) 7 refs.

Rats fed a hypolipotropic diet of moderate fat content (20 percent) and exposed to cold ($1.5^{\circ} \pm 1^{\circ} \text{C}$.) showed no excessive deposition of fat in the liver. With a high-fat (50 percent) low choline diet, lipids did accumulate in the liver but to a lesser degree than in controls kept at room temperature; this "pseudo-lipotropic" action of cold is demonstrable in acclimatized as well as normal animals.

Copy seen: NNC.

37311. SELLERS, EDWARD ALEXANDER, 1916- , and others. Electrical activity of skeletal muscle of normal and acclimatized rats on exposure to cold. (American journal of physiology, June 1954. v. 177, no. 3, p. 372-76, illus., tables) 15 refs. **Other authors:** J. W. Scott and N. Thomas.

Contains an account of experiments with measurements of oxygen consumption, body temperature, and electrical activity of skeletal muscle recorded simultaneously. The findings indicate that increased metabolism of the visceral tissues is an important factor in the continued elevation of heat production in the acclimatized rat, and that increased muscular activity in cold environment is "a second line of defense" in maintaining body temperature. **Copy seen:** DLC.

37312. SELLERS, EDWARD ALEXANDER, 1916- , and others. Regulation of food consumption by caloric value of the ration in rats exposed to cold. (American journal of physiology, June 1954. v. 177, no. 3, p. 367-71, illus.

tables) 9 refs. *Other authors:* R. W. You and N. M. Moffat.

Rats living at 1.5° C. were fed diets with a constant content of protein and a fat content of 5-44 percent. The amount of food consumed was less with diets of high fat content, but the caloric intake was remarkably constant, irrespective of the amount of fat present in the diet. No consistent difference in rate of survivals or of increase in body weight was observed, regardless of the diet but the growth rate was lower than at room temperature. **Copy seen:** DLC.

In 1893, a twin-screw steamer *Leitenant Orlsyn*, a paddle-wheeler, *Leitenant Malygin* and a barque *Leitenant Skurator* were built at Dumbarton, Scotland, for the Russian Navy. Manned by Russian crews, the vessels sailed from Dumbarton (July 18) via Vardø, Yugorskiy Shar, and the Kara Sea to Gol'chikha on the Yenisey and upstream to Yeniseysk (Oct. 5), where they were based for service. In Yugorskiy Shar the expedition met Captain Joseph Wiggins on his ninth expedition to the Yenisey, with the *Blencathra*, *Orestes* and *Minusinsk*, and all six ships continued the voyage to Gol'chikha together. The impressions of the voyage are described, stressing the

hardships due to ice conditions of Kara Sea, stormy weather, lack of reliable maps and defects of the harbor in Gol'chikha, where a part of Wiggins' cargo was lost in transshipment to river craft. The author was officer on the *Leitenant Malygin*. Map shows the vessels' track from Yugorskiy Shar to Dudinka. **Copy seen:** DLC.

Matiuskin, and investigation of the small peoples of the far Northeast.

Contains a review of the ethnographic information in the narrative of the 1820-24 expedition of Vrangel, q. v. (also *Arctic Bibliography*, No. 19001). Chukchis, Kamchadals, Yukaghirs, Chuvantsy, Aleuts, Asiatic Eskimos. Tungus and Lamuts are considered, as well as some little known or already extinct tribes: the Khodyntsy, Omoki, Shelagi, and Anauli. The problem of Paleo-Siberian peoples and their ethnic origin is discussed. Material culture of natives in the Kolyma region, their economy and trade are outlined. More recent expeditions, the work of Soviet scholars, and establishment of a new social and economic order (sovietization) are briefly reported; a list of old and new literature (103 items) is appended. A vocabulary of ethnographic terms with native equivalents and often lengthy explanations by Sergeev follows (p. 331-41) this paper.

37324. SERGEEV, MIKHAIL ALEK-SEEVICH. Kamchatskiĭ kraj. Moskva, Tsentral'noe biŭro kraevedeniĭa, 1934. 92 p. tables, fold. maps, 31 refs. Text in Russian. *Title tr.:* Kamchatka Region.

A concise outline of the natural features, history and economy of the region which embraces Kamchatka and Chukotka Peninsulas and the Okhotsk district. Chapters on geography (p. 3-12): situation, coastline, relief, rivers and lakes, climate, population; on history (p. 13-35): conquest, pre-Revolutionary conditions, period of intervention and struggle, the Soviet development; on the economy (p. 36-84): natives' economy, fisheries, sea-hunting, fur trade and animal husbandry, reindeer breeding, new branches of economy, forestry, agriculture, power and mineral resources, transportation and communication, colonization. Finally, prospects of the region are sketched (p. 85-88), and a bibliography given: 22 items and nine periodicals.

Fold. maps of (1) Ėvenkiyskiy, Koryakskiy and Chukotskiy national districts and Kamchatka district; (2) Kamchatka Peninsula. *Copy seen:* DLC; MH-Z.

37325. SERGEEV, MIKHAIL ALEK-SEEVICH. Literatura narodov Severa. (Sibirskie ogni, Sept.-Oct. 1952. god. 31, no. 5, p. 155-66) Text in Russian. *Title tr.:* Literature of the peoples of the North.

Contains a review of a newly born northern literature. The Northern Faculty in Leningrad has been educating since 1927 a few selected representatives of fourteen small northern peoples; and from these, various young authors have developed. They are named, and their works in prose and verse are characterized. They write in Russian, or in their native tongue. Their native

folklore has had a great influence upon their creative work. Social problems, the rise of the new order, Soviet leaders, etc., are emphasized in their writings. Native illustrators are also mentioned. These young literary and graphic artists belong to the nationalities of Voguls, Ostyaks, Samoyeds, Tungus, Goldi, Udé, Koryaks, Chukchis, Yukaghirs, and Asiatic Eskimos. *Copy seen:* DLC.

37326. SERIKOV, I. Taĭmyrskii natsional'nyi okrug; k 5-letiiŭ sushchestvovaniĭa okruga. (Sovetskoe kraevedenie, Oct. 1936. no. 10, p. 19-25, 2 illus.) Text in Russian. *Title tr.:* The Taymyr national district; on the 5th anniversary of the district.

Contains a geographical sketch of the region; its surface features, particularly the rivers and lakes, its climate, animals and birds. The economy, transportation routes and means, including aviation and the still useful dog-sledges, the non-ferrous metal industry and coal mines at Noril'sk, the fishing industry at Ust'-Port, etc., are described. Reindeer breeding (86,000 head in 1935) remains the chief industry. Some 1,200 persons live by fishing and the net return from the hunting industry has been five and a half million rubles. The native population (11,000 on 880,000 sq. km.) includes Yuraks, Samoyeds, and Dolgans, all nomadic peoples. Attempts to make them settled, to organize schools and medical help are being made, the shamans having been liquidated.

37327. SERNANDER, JOHAN RUTGER, 1866-1944. The warm postglacial period and the postglacial climatic deterioration of northern Europe. (*In:* International Congress of Plant Science, Ithaca, N. Y., 1926. Proceedings, pub. 1929. v. 1, p. 663-66) 11 refs.

Contains a discussion in which evidence is offered that the paleoclimate of northern Europe was milder than the present. That well-defined period was brought to an end long ago by a climatic deterioration which is distinctly noticeable in Quaternary layers of different kinds

This period of deterioration, called "fimbulwinter" by the author, caused considerable migration of plants from northern into central Sweden (sub-Atlantic glacial relicts). "The big task of today is to connect the post-glacial history of North America with that of Europe." The periods of the late Quaternary in Sweden are tabulated on p. 665.

37333. SHABUNIN, NIKOLAI AVENIROVICH, 1866-1907. Sīvernii kral i ego zhizn'; putevyiā zamētki i vpechatlēniā po sīvernnoi chasti Arkhangel'skoĭ gubernii. S.-Peterburg, Tipogr. Imp. Akad. nauk, 1908. ii, 44 p. (Akademiā nauk SSSR. Otdelenie ruskago iazyka i slovesnosti. Sbornik, t. 84, no. 1) Text in Russian. **Title tr.:** The Northern region and life there; notes and impressions during a journey to the northern section of Arkhangel'sk Government.

Account of a journey in 1903-1904, from St. Peterburg to Arkhangel'sk (by railway), to Mezen' (by boat), then through Pinega and Kholmogory back to Arkhangel'sk. Mezen' District and the places visited are described, with notes on the population (Russians, Zyryans and Samoyeds), their trade, hunting, living habits, wedding ceremonies (Russian), songs (texts), dwellings, churches and chapels, superstitions, ritual of sorcery and incantations. Author's notes on the Samoyeds depict their dwellings, religion, festivals, customs, hunting and trade. An artist by profession, he gives special attention to the style of dwellings and architecture of northern churches (in Pinega and Kholmogory), but of the many sketches he

made on this trip, none is reproduced here. This paper, read before a meeting of the Society of Architects in St. Petersburg, is a posthumous publication, introduced with a short biographical sketch of the author, by N. Kondakov.

37338. SHANES, ABRAHAM M. Effect of temperature on potassium liberation during nerve activity. (American journal of physiology, June 1954. v. 177, no. 3, p. 377-82, tables) 19 refs.

The resting loss of potassium from partially dissected stellar nerves of squid was increased at low temperature; no reabsorption of potassium was seen during the following rest period. In the leg nerves of a crab, the resting and activity losses of potassium are increased, while reabsorption after activity is decreased by lowered temperatures.

Copy seen: DLC.

37339. SHANES, ABRAHAM M. Effect of temperature on potassium liberation during nerve activity. (Federation proceedings, Mar. 1954. v. 13, no. 1, pt. 1, p. 134)

The liberation of potassium in partially isolated squid and crab nerves was found to be augmented by low temperature. Reabsorption of potassium which takes place in crab nerve following activity, was reduced by cold.

37340. SHANNON, WILLIAM D., and W. L. SHANNON. Connell Dam provides water supply for Alaska's first pulp mill. (Civil engineering, June 1954. v. 24, no. 6, p. 37-41, illus. incl. 2 sketch maps)

Contains description of construction features and operations of Lake Connell Dam, located about three miles inland near Ketchikan, Alaska. The dam will provide processing water for the Ketchikan Pulp Co.'s mill which is nearing completion on Ward Cove, about ten miles northwest of Ketchikan, on Revillagigedo Island. The 82-foot high structure impounds 11,510 acre-feet water above invert of discharge pipe. Water will be transported from Lake Connell to the pulp mill, a distance of about three miles.

through a wood-stave pipeline and two concrete lined tunnels. Authors' firm designed and supervised construction of dam and conduit. **Copy seen:** DLC.

Text in Russian. **Title tr.:** Systematic review of animals of the forest zone, V. Insects, 8. Plant lice — Aphidoidea.

Contains data on the systematic content, biology, ecology and economic importance of 380 species of plant lice of the forest zone of the U.S.S.R. They are not so abundant in the taiga where they are connected mostly with conifers, as in other subzones. Some of the more injurious forest pests, like kermes and other parasites, belong to plant lice. The life cycle and some hosts are discussed. **Copy seen:** DLC; MH-Z.

37343. SHARP, ROBERT PHILLIP, 1911- . Glacier flow: a review. (Geological Society of America. Bulletin, Sept. 1954. v. 65, no. 9, p. 821-38) 140 refs.

Contains detailed review of current work, recent progress, and definition of future problems, with an extensive bibliography (primarily of work pub. since 1935). Five main topics are considered: (1) physical properties and behavior of ice; (2) crystallographic relations within glaciers; (3) mechanics of glacier flow (actual mechanisms by which ice yields to stress); (4) distribution and

variation of flow velocity; and (5) modes of glacier flow (movement of the glacier as a body as differentiated from mechanisms of flow). Many references are made to recent work in arctic regions, especially in the Malaspina and Juneau Ice Field regions of Alaska.

37344. SHARP, ROBERT PHILLIP, 1911- . Glaciological investigations on Malaspina Glacier, 1952 and 1953. (Polar record, July 1954, v. 7, no. 48, p. 149-50)

Deformation of an aluminum pipe, inserted in 1,000-ft. hole bored in the glacier in July 1951, was measured in Aug. 1952. Differential movement between top and bottom of hole amounted to 5.75 ft. (1.75 m.). Glaciological research initiated by author on Saskatchewan Glacier, Alta., in 1952 is also noted. **Copy seen:** CaMAI; DLC.

37345. SHARP, ROBERT PHILLIP, 1911- , and M. F. MEIER. Glaciological studies on Malaspina Glacier, Alaska, and Saskatchewan Glacier, Canada, in 1954. 6 p. Mimeographed. (Status report, Nov. 1954. Contract N6onr-244-16. Task order XVI. Project NR-081069) ref.

Resurvey (by a seven-man group led by the writer) in 1954 of a bore hole sunk 1,000 ft. into the Malaspina Glacier in summer 1951 (*Arctic Bibliography*, No. 26079) was not possible because the pipe was found broken off at a depth of 300 ft. Conclusions from the bore-hole survey and evidence for the glacier's renewed activity in 1953-54 are discussed. Such activity may have been generated in a period of excess accumulation in Seward Glacier in 1948-49 or earlier. Approx. 100 ice samples were collected on the Saskatchewan and Malaspina glaciers for oxygen-isotope studies. Bore-hole attempts, surface velocity measurements, surface profile changes, sedimentary layers, flow foliation, and proglacial features on the Saskatchewan Glacier, Alberta, are also described. **Copy seen:** CaMAI.

37346. SHASHKOV, SERAFIM SERAFIMOVICH, 1841-1882. Rabstvo v

Sibiri. (*In his: Istoričeskije étudy, St.-Peterburg, 1872, t. 2, p. 97-166*) about 50 refs. Text in Russian. **Title tr.:** Slavery in Siberia.

A study, based on archival material and literature, of Russian and Cossack enslavement of Siberian natives, mainly women and children, and of the slave trade. Kets (Yeniseians), Kamchadals, Koryaks, Tungus, Ostyaks, Kirghiz, Kalmuks, Buryats and others were taken during hostilities, also in time of peace. Captured adult males usually were killed; children were trained for labor, drawing sledges, etc. Statistical data, prices of slaves, places and names, etc., are included. Executive orders of 1733-1757 legalized Russian keeping of native slaves on condition of their baptism. Liberation was ordered first in 1808, but slavery lasted some 40 years longer.

Copy seen: DLC.

37347. SHASHKOV, SERAFIM SERAFIMOVICH, 1841-1882. Rossijsko-amerikanskaja kompanija. (*In his: Istoričeskije étudy, St.-Peterburg, 1872, t. 2, p. 295-349*) Text in Russian. **Title tr.:** The Russian-American Company.

Conquest of the Aleutian Islands by Russian traders and seafarers is outlined. The activities of the Russian-American Co., founded in 1743, is described in detail: its profits from beaver and seal hunting, its trade monopoly, granted in 1799, in the Aleutians, Kurils and other northern islands; fate of natives in its service: forced labor at low wages, virtual slavery (*kasor*), dispersal of families, and disease, chiefly syphilis and scurvy brought by Russians, etc. Notes are included on the Tlingits, their revolts, the equally bad situation of Russian workers, activity of the Orthodox church (unsuccessful among the Aleuts) and schools, poor health conditions, status of cross-breeds, commerce, etc. The Company is blamed for greed and exploitation of workers, native and Russian alike.

37348. SHASHKOV, SERAFIM SERAFIMOVICH, 1841-1882. Sibirskie inorodtsy v XIX stolëtii. (*In his: Istoričeskije étudy, St.-Peterburg, 1872, t. 2, p. 169-292*) Text in Russian. **Title tr.:** Siberian natives in the 19th century.

An historical study, based on archival documents, of economic and social conditions among Siberian natives, chiefly Ostyaks of the districts of Obdorsk, Berezovo and Naryn, also natives of the

Turukhansk region and as far east as Kamchatka, in the period 1813-1865. Russian arrogation of the best hunting and fishing grounds, pastures and cattle, their usurious credit system, and their exploitation and demoralization of the natives generally, are presented in detail. Resulting famines (e.g. in the Turukhansk region 1815-1816) and rapid decline of native population are described. Reform measures (Speranskij, and the "tax commission" of 1828-1835, etc.) and their failure, native revolt (Ostyaks and Samoyeds under Vauli Piettomini in the Obdorsk region in 1841), are discussed. Economic conditions among Yakuts, Tungus and Buryats are sketched also. A chapter on religious beliefs and customs (p. 224-48) stresses difficulties in christianizing natives as exemplified among Kamchadals, Koryaks, Yakuts, Chuokeis and Ostyaks; their lack of interest in schooling, their patriarchal family organization, status of women, etc., are considered. Health conditions are sketched (p. 277-92) with attention to common diseases, especially syphilis, smallpox and other epidemics, vital statistics. The dying-out of Siberian natives, assimilation with Russians, etc., is discussed.

37349. SHAW, CHARLES GARDNER, 1917- , and R. SPRAGUE. Additions to Alaskan fungi. (Washington (State). State College, Pullman. Research studies. Sept. 1954. v. 22, no. 3, p. 170-78) 12 refs. **Also pub. as its:** Agricultural Experiment Stations. Scientific paper, no. 1334.

Contains list of fungi from southeastern Alaska which are either new to Alaska or occur on newly reported hosts. Specimens were collected by R. Sprague in summer 1952. Thirty-one species are listed, with notes on locality found, species of host and, in some cases, physical description.

Copy seen: DGS.

37350. SHAW, Sir WILLIAM NAPIER, 1854-1945. Aeroarctic; systematic observations in the Arctic. (Royal Meteorological Society. Quarterly journal, July 1930. v. 56, no. 236, p. 352-54)

Contains note on a project originally suggested by Nansen for the use of aircraft as means of communication, transport, and supply for more or less permanent stations on arctic land or ice. An international organization, Aeroarctic, was set up with a local group in each interested country. Benefits to meteorology are noted. Polar weather stations

and equipment set up by the Russians are briefly described.

37351. SHAW, WILLIAM THOMAS, 1873- . The Sabine gull in Oregon and on the lower Yukon. (Condor, May-June 1924. v. 26, no. 3, p. 108)

Contains three Alaskan records of *Xema sabini*: one from the lower Yukon River in 1908, and two taken at St. Michael on July 30 and Aug. 4, 1908 by the author. **Copy seen:** DSI; MH-Z.

37352. SHCHANOV, V. T. Ob organizatsii meditsinskoi pomoshchi naseleniū v raionakh krafnogo severa. (Sovetskoe zdravookhranenie, Jan.-Feb. 1954. god 13, no. 1, p. 21-25, illus.) Text in Russian. **Title tr.:** Organization of medical aid to the population of the districts of the far North.

Contains an account based on the author's experience in arctic areas, and on the conviction that due to the special arctic conditions (large areas, poor communication) the district hospitals cannot properly function. In order to bring specialized medical service closer to the population, supplementary specialized hospitals are proposed, with functions similar to those of the district (raion) hospitals. The organization of the whole project is also explained by a sketch map.

Copy seen: DLC.

37353. SHCHAPOV, AFANASII PROKOPEVICH, 1830-1876. Istoriko-geograficheskii i etnologicheskii zametki o Sibirskom naselenii. (Vsesoiuznoe geograficheskoe obshchestvo. Vostochno-Sibirskii otdel. Izvestiia, 1872. t. 3, no. 3, p. 142-59; no. 4, p. 185-204; no. 5, p. 243-74) about 40 refs. Text in Russian. **Title tr.:** Historico-geographic and ethnological notes on the Siberian population.

Contains a study on the physical and psychological type of the Russian settler in northern Siberia as a result of acclimatization and racial mixture. An attempt was made to find out what changes were caused by northern climate, mixed marriages, and contact with people of another culture, from investigation of the old settlers of Russian origin at Obdorsk, Turukhansk (where the writer did field work in 1866), and Verkholensk, on the Nizhnyaya Tunguska River, and in the large Province of Yakutia. In these regions, the Russians came in contact and had close relations with Ostyaks,

Samoyeds, Tungus, Yakuts, and Buryats. The physical anthropology of Russians and cross-breeds of these regions is investigated in detail, and their psychological character as well. The influence of Siberian natives upon language of Russian colonists, their clothing, dwellings, food habits, customs, etc., is discussed.

Logs of coniferous trees left in the forest are subject to attack by various pests. The Laboratory for Protection of Forests and Wood of the Karelo-Finnish section of the Academy of Sciences carried out extensive investigations, and established that the timber is attacked almost in summer, May-Aug., and that the danger period is shorter in northern areas than in the south. The best protection is to peel the bark; if the logs are piled, only those in the two uppermost layers (in the North only the top one) are to be peeled. During Sept.-April, no protective measures are needed.

37375. SHIROKOGOROV, SERGEĪ MIKHAILOVICH. General theory of shamanism among the Tungus. (Royal Asiatic Society. North China Branch. Journal, 1923. v. 54, p. 246-49)

Contains author's basic ideas on the role of shamanism in a primitive society, drawn from his study *Opyt izsledovaniĭ oshoe shamanstva u tungusov*, 1919 (Arctic

Bibliography, No. 31957). Animism, he concludes, is a primary condition among the Tungus for the existence of shamanism, which is correlated with the spread of nervous and mental disorders; a shaman can be considered as "a safety valve" of the clan, preventing the harmful spread of these maladies.

37376. SHIROKOGOROV, SERGEĪ MIKHAILOVICH. Northern Tungus migrations in the Far East; Goldi and their ethnical affinities. (Royal Asiatic Society. North China Branch. Journal, 1926. v. 57, p. 123-83, fold. map) 80 refs.

Contains a discussion on the origin and ethnography of the Goldi people and their connections with other Tungus groups. The Goldi culture consists of elements belonging to several ethnic groups: the Paleo-Asiatics, Manchu, Chinese and northern Tungus. I. A. Lopatin's work cited as "Goldi of the Amur, Ussuri, and Sungari Rivers" (Vladivostok, 1922, pub. in Russian) is frequently quoted and criticized. Shirokogorov presents his own theory on migrations of the northern Tungus (see map), and supports the idea of a southern origin of the reindeer Tungus.

Contains account of 16 forms collected on the Khibiny Mountains, new to that area and the Soviet Union. Data on general distribution and notes on synonyms, earlier accounts, etc. are included.

Copy seen: DLC.

37383. SHMAKOV, IVAN NIKOLAEVICH, 1869- . Russkie lopari s vrachebno-sanitarnoi tochkii zrieniâ i meditsinskai pomoshei' v Laplandii. (Pamiatnaia knizhka Arkhangel'skoi gubernii, 1908. p. 19-36) 12 refs. Text in Russian. **Title tr.:** The Russian Lapps from the medical-health viewpoint and medical aid in Lapland.

Contains review of natural conditions of the Kola Peninsula, historical information on the Lapps, their anthropological type and psychological character, their economy (reindeer breeding and fishing), dwellings and food. Details are given on health conditions: infant mortality, 40 percent; annual population increase, only 2.9 percent. In 1890 there were 1,940 Lapps in a total population of 8,910 on the Peninsula. Medical service since 1854 is reviewed, difficulties in combatting epidemics (small pox and influenza) are stressed (the author was district physician in the town of Kola for many years). The most common ailments are: scurvy (rare among the Lapps), diseases of respiratory organs (pleurisy), and digestive tract, syphilis and arthritis. Proposals are made for improvement of the medical service in the Kola region.

37392. SHOSTAKOVICH, VLADIMIR BOESLAVOVICH, 1870- . Istoriko-ethnograficheskoe znachenie nazvanii rek Sibiri. (Vsesoiuznoe geograficheskoe obshchestvo. Vostochno-Sibirskii otdel. Izvestiia, 1926. t. 49, vyp. 2, p. 115-30, tables, text map) Text in Russian. Abbreviated German version of this paper was listed as *Arctic Bibliography*, No. 31985. **Title tr.:** The historico-ethnographic significance of the names of Siberian rivers.

An attempt is made by a geographer to explain river names of Siberia and trace their ethnic origins. Some 500 names are grouped (29 groups) according to their endings which are usually a generic, meaning "river" or "water." Some of these are identified as Tungus, Yeniseian, Yukaghir, or Finno-Ugric in origin, others are still undetermined. River names are thus helpful in locating former and present dissemination and territory of certain ethnic groups, e. g., such names of Tungus origin are found over a vast area bordered by the Pacific and a line from the Yalu River mouth—the southern tip Lake Baykal—Angara and Yenisey. In the region of the middle and lower Lena and Vilyuy, the river names are of mixed Tungus-Yakut origin.

"Damage to construction by permafrost and various countermeasures are discussed. Improper construction procedures relative to the permafrost layer have resulted in more structural failures in northern areas than failures due to all other causes combined. Permafrost must be evaluated strictly on the basis of its temperature. Substructures combining piling and replacement of the active layer with non-frost-susceptible materials appear to be the best solution. . . . A minimum 18-in. air space should be provided below well insulated floors. The approximate distribution of permafrost in N. Am. is mapped."—SIPRE.

Contains sketches in popular style, of his arctic flights: (1) Irkutsk - Yakutsk - Tiksi - Dunay Island and over Laptevykh Sea, 1934; (2) Moskva - Vaygach, 1935; (3) Krasnoyarsk - Dudinka - Nordvik and over Laptevykh Sea, 1935; (4) Irkutsk - Yakutsk - Tiksi - Bol'shoy Lyakhovskoy Island, winter 1936; (5) Krasnoyarsk - Dudinka - Dikson and over Kara Sea, summer 1936; (6) Moskva - Irkutsk - Yakutsk - Anadyr' - Vrangeli Island - Cape Chelyuskin, Arkhangel'sk - Moskva, winter 1937; (7) Krasnoyarsk - Yakutsk -

Tiksi and over Laptevykh Sea, summer 1937; (8) Tiksi - Ambarchik - Uelen - Point Barrow, flights over the Arctic Basin in search of the flyer Levanevskii, and return via Fairbanks - Petropavlovsk to Vladivostok, fall 1937; (9) Krasnoyarsk - Yakutsk - Tiksi and over Laptevykh Sea to the relief of vessels caught in the ice (ice-breaker *Lenin* and four others), Mar.-May 1938; (10) Moskva - Arkhangel'sk - Dikson - Severnaya Zemlya - Tiksi - Mys Molotova - Chokurdakh-Yakutsk - Moskva, summer 1938; (11) Krasnoyarsk - Dudinka and over Kara Sea with a 25-hour non-stop flight to Novaya Zemlya, Franz Joseph Land and Severnaya Zemlya, June 1941; (12) Moskva via Iceland and Greenland to Washington and return, with V. M. Molotov on a diplomatic mission, summer 1942. The tasks of flights 1934-41 were chiefly related to the Northern Sea Route service: ice reconnaissance, transportation of, and medical aid to polar station personnel, relief of ships in distress. The character and achievements of the Soviet aviators (P. G. Golovin, I. I. Cherevichnyi, V. S. Molokov, M. V. Vodop'ianov) are extolled. Flight conditions and impressions, aircraft (mostly hydroplanes), air fields and ports, populated places, polar stations, etc., are noted in a fragmentary way. Twelve text-maps show routes of the flights. *Copy seen:* DLC.

Natural ice must be regarded as the most wide-spread mineral on the earth's surface, and general methods of crystallography, mineralogy and petrography should be applied for its investigation in the frame of a new science: structural glaciology. "The peculiarities of the crystalline structure of fresh ice and its dependence on temperature, degree of supercooling, humidity and condensation nuclei are considered. The range of supersaturation and speed of crystal growth determine the forms of snow crystals. Lower temperatures and humidity cause the formation of small needles. An increase in the temperature and humidity effects the appearance of snowflakes in the forms of prisms, pyramids, plates, stars and long needles. The last two forms are usually formed in low clouds where the vapor pressure and temperature are relatively high. Slow water cooling causes the appearance of large ice crystals. An increase in the cooling speed produces large numbers of small ice crystals. The speed of the cooling processes determines the gas and salt content of the ice. Ice structure in permafrost areas indicates the thermal and climatic conditions during permafrost formation."—SIPRE.

Structural glaciology will throw new light on the nature of frozen ground, and fossil ice (Novosibirskiye Ostrova), and will clarify the origin and peculiarities of such phenomena as "bulgunnakh," ice mounds on the frozen ground, termed hydrolaccoliths or pingoes.

Paper delivered to the Moscow Branch of the All-Union Geographical Society on Dec. 10, 1951. Russian colonization in Siberia spread first into the northern taiga regions as its primary purpose was fur trade, and the good soil in the South was utilized only later. The demand for grain preceded production in Siberia therefore, and it was imported from European Russia. The transportation routes to Yakutsk and Kamchatka, various kinds of river boats (dosehanik, lod'ia, barka, kaik) and ships (koch') are described; costs of the vessels and of transportation to each area, including Yakutsk and Kamchatka, are noted; and final grain prices in various provinces of Siberia are reported for each season. The references to published and unpublished sources are given in footnotes.

37411. SHVEDE, EVGENIĬ EVGENIEVICH. Ostrov Vrangelfa. (Morskoi sbornik Sept. 1923. god 76, no. 9, p. i-xiv, maps (1 fold.)) 22 refs. Text in Russian. *Title tr.*: Vrangeli Island.

In view of British-Canadian claims to Vrangeli Island voiced in 1921-22, the author gives a survey of its discovery and exploration, beginning with F. P. Vrangeli's conjecture of its existence and location during his expedition of 1820-1824; expedition of Kellett on the *Herald* and *Plover* in 1849, and that of Ringgold and Rodgers on the *Vincent* in 1855 who sighted the island; the first landing on it by Captain Dallman in 1866; landings by Long on the *Nile* in 1867, by Hooper on the *Corwin*, and Berry on the *Rodgers* in 1881. Exploration of the island by the Russian expedition on the *Valgach* and *Taimyr* in 1911, emergency landing of the *Karluk's* crew and rescue expedition on the *Bear* in 1914, also Canadian expeditions organized by Stefansson in 1921 and 1923 are noted. Russian rights of possession are emphasized. A Soviet map of the island published in 1923 is reproduced (p. ix). References in footnotes.

Economic notes; letters from the Markhinskiy ulus.

Contains a detailed demographic and economic description of this Yakut ulus, (district encompassing several villages), situated on both sides of the Vilyuy River and its left tributaries, the Markha and Tyukyan' (approx. 64° N. 120° E.) an area of about 894,000 sq. versts, populated by 21,135 Yakuts in 1895. The limits, natural conditions, rivers, climate, and vegetation are indicated. Details are given on the Yakut tents and food, vital statistics, the poor health conditions, and high child mortality. The economy of the Yakuts is outlined: animal breeding and the role of hay, commerce, taxes and debts, the classes of poor and rich, the deputies, and their privilege of lavish entertainment, etc. Statistical data are included.

37416. SIBIRSKIY KRAY. STATISTICHESKIĬ OTDEL. Narymskii kraj; materialy statistiko-ekonomicheskogo issledovaniĭa 1910-11 g. g., sobrannye i razrabotannye pod rukovodstvom i redaktsiei V. Ĭa. Nagnibeda. Tomsk, 1927. vi, 640 p. (tables), 20 plates, fold. map. Text in Russian. **Title tr.:** The region of Narym; materials of the statistical-economic investigations in 1910-1911, collected and prepared under direction of the editor V. Ĭa. Nagnibeda.

The study was sponsored by Tomsk Regional Resettlement Administration (Tomskoye Rafonoe Pereselencheskoe Upravlenie), and carried out by a thirteen-man party headed by Professor Nagnibeda. They travelled some 25,000 versts by boat, horse, ski and on foot, and surveyed 538 populated places (all except the city of Narym), among them 187 settlements (*ŭrty*) of Ostyaks, Ostyak-Samoyeds, and Tungus. The population of the region (56°40'-61°15' N. 75°-88° 24' E.) at this time was 22,168 individuals, or 4,096 families, of whom 3,645 persons, 877 families, were natives; and for every locality, the population is indicated as pure Russian, or pure native, or mixed. The whole region is treated in six economic districts on the basis of the river basins, Ob', Ket', Tym, Yagodnaya and Chaya, Parabel', and Vas-Yugan. Tabular data are presented on: age and sex of population, literacy, classes (farmers, town people, natives), religion, number and kind of dwellings, means of communication (number of boats, carts),

livestock, orchards, meadows, fishing and hunting (including numbers of nets, traps, etc.), gathering of nuts (*Pinus sibirica*) and berries, yearly household income, knowledge of the Russian language, commerce, agriculture, etc. A list of places inhabited by Russians is added (p. 631-40). *Plates* are 38 photographs of landscapes, villages, and dwellings, Russian Samoyed, and Tungus groups and families, fishing equipment, Samoyed idols and excavated artifacts, figures of men and animals, etc. The ethnographic objects were taken to Finland by K. O. Donner. *Copy seen:* DLC.

Text in Russian. *Title tr.:* Preliminary results of the demographic census of 1926 in the Territory of Siberia. Compiled by S. M. Pushkarev and A. I. Petrov.

Contains discussion and tabular data on: (1) population, (2) growth of cities, and (3) the situation in regard to dwellings in the Territory of Siberia (49°-76° N. 70°20'-148°20' E.), which covers some 4,217,825 sq. km., and has a population of 8,640,885. Data are broken down for 20 districts (*okrug*) of the Territory, and compared with such of 1920 and 1923; arctic and subarctic areas are included. Numbers of rural and urban population (without indication of nationalities), percentage of increase, etc., are shown.

37421. SIEROSZEWSKI, WACŁAW, 1858-1945. Kak i vo chto viêruût âkuty; êtnograficheskii nabrosok. Sibirskii sbornik, 1890, pub. 1891, vyp. 2, p. 116-88) Text in Russian. *Title tr.:* How and what the Yakuts believe; an ethnographic sketch.

Contains a well-documented account of Yakut conceptions about diseases and their causes, death and the fate of the human soul; funeral customs, and the service of shamans to the sick and the dead. The shaman's rank, costume,

drum and other accessories, texts of prayers, etc., are given, shamanistic spirits listed, and sacrifices described. Yakut beliefs in spirits, etc., respect for the bear and fire, souls of natural objects, spirit of water, etc., are described in considerable detail. Yakut sayings are quoted with place and year of recording indicated. The material was collected and ceremonies observed by the writer in 1882-1889, mostly in the Namskiy ulus, the Verkhoyansk, Aldan, and Kolyma districts. **Copy seen:** DLC.

37423. SIGLAN, PETR. Kolyma; istoriko-geograficheskii ocherk. (Sovetskoe kraevedenie, Feb. 1936. no. 2, p. 56-68, 7 illus.) Text in Russian. **Title tr.:** Kolyma; an historical-geographical sketch.

Contains brief historical sketch of the discovery and conquest from 1641, of the Kolyma district of northeastern Yakutia, the struggle between Cossacks and Chukchis, Russian expeditions between 1739 and 1928. The surface features, mountains and rivers, especially the Kolyma itself, climate, vegetation and wildlife are described. The aboriginal population, e. g. Tungus, Lamuts, Yukaghirs, Chuvantsy and Chukchis, are

characterized: their numbers in 1928, occupation, beliefs and folklore. The new settlers, Russian and Yakuts, brought new religious beliefs and practices, also cattle breeding, into the district. Recent developments under the Soviet rule (since 1928) are presented in some detail: the building of the town of Magadan on the Okhotsk seacoast, and its port Nagayevo (59°34' N. 150°46' E.); construction of a 600 km. road between Magadan and the upper Kolyma River, development of the sea route between Vladivostok and the mouth of the Kolyma where the new port Ambarchik (69°40' N. 162°24' E.) was built, Kolyma river boats' trip from the Lena shipyards where they had been built; the organization of kolkhozes, school and medical services, etc. **Copy seen:** DLC.

Text in Italian. Summary in French. *Title tr.:* Copper in the treatment of ulcerations following frostbite of second and third degree.

Contains a report on the use of a copper preparation in treatment of ulcerating sequels of frostbite. Reduction of purulence and of pain, and stimulation of healing are claimed. Seven brief case histories are included. *Copy seen:* DSG.

37429. SIMONS, RODGER L. Russia fights another cold war. (United States Naval Institute. Proceedings, Sept. 1954. v. 80, no. 9, p. xviii, 959-67, 6 illus.)

General historical description of Russian activity in the development of the Northern Sea Route. Of 90 radio stations along the coast and islands of the Soviet Arctic, 35 are occupied the year around, the northernmost at Tikhaya Bukhta,

Zemlya Frantsa Iosifa. Organization and facilities of a few of these bases are cited. More favorable climatic conditions, economic developments in western Siberia, and the emphasis placed upon further development of regular navigation in the northern waters by the Main Administration of the Northern Sea Route (Glavsevmorput) are noted.

37430. SIMPSON, C. J. W. British North Greenland Expedition, 1952-54. (Polar record, Jan. 1954. v. 7, no. 47, p. 47-50, 4 illus.) Errata, *ibid.* July 1954. v. 7, no. 48, p. 268.

Contains account, by the leader, of the expedition's work during 1952 and 1953. The central station "Northice" (78°07' N. 38°10' W.) was established Aug. 18-Oct. 27 by a six-man party, supported by two aircraft which dropped 90 tons of supplies. A three-man party wintered (1952-53) at "Northice." In Mar. 1953, work in and around Dronning Louises Land (76°50' N. 25° W.) was begun, and eight weasels were brought from Danmarkshavn (one scrapped en route). Seismic and gravimetric teams began a survey of the ice sheet on May 11, and the "Northice" station was relieved. Further notes on personnel and on supply by sea and air during July-Aug. are given.

37431. SIMPSON, E. S. W. On the graphical representation of differentiation trends in igneous rocks. (Geological magazine, May-June 1954. v. 91, no. 3, p. 238-44, 3 diags., table) 11 refs.

"This paper describes a revised method of plotting analyses of igneous rock suites using the Mafic and Felsic Indices as defined. A composite M-F diagram has certain advantages over the triangular iron-magnesia-alkalis diagram and enables a genetic distinction to be made between the tholeiitic and calc-alkaline series."—Author's abstract. Analyses of rocks of the Skaergaard intrusion (68°10' N. 31°40' W.) in the Kangerdlugssuaq Fjord region of East Greenland are compared with igneous rock suites from South-West Africa and Scotland.

37432. SIMPSON, Sir GEORGE CLARKE, 1878- Past climates. (Na-

ture, Dec. 28, 1929. v. 124, no. 3139, p. 988-91, diagrs.)

Contains a discussion of the factors affecting the climatic zones of the world, of which the amount of solar radiation is considered the most important. Consideration is given to late Paleozoic glaciation, the Pleistocene ice age, and recent changes in climate (moderate changes in the amount of rainfall). For criticism, see A. I. Tolmachev *O klimate proshlogo*, 1930, No. 37808. Author's previous paper of similar title was listed as *Arctic Bibliography*, No. 16120.

37433. SIMPSON, R. N. Epidemics in the Eastern Arctic during 1953. (Arctic circular, Nov. 1953. v. 6, no. 5, p. 53-55)

Contains notes on influenza at Frobisher Bay (Feb.-March), Ft. Chimo (Feb.), Pangnirtung (May and Aug.), and Cape Dorset (May), and outbreaks of trichinosis at Cape Dorset (May). The cause and symptoms of trichinosis are given and treatment noted. An epidemic of poliomyelitis occurred at Maguse River, western coast of Hudson Bay, in Nov. affecting only natives who had come from Southampton Island.

37435. SINITSYN, M. S. Zhizn' nentsev. (Geografiā v shkole, July-Aug. 1954. no. 4, p. 20-27, 5 illus.) Text in Russian. **Title tr.:** Life of the Samoyeds.

Contains a sketch of the present-day situation of Samoyeds living in three districts: Nenefskiy (center Nar'yan-Mar), Yamalo-Nenefskiy (center Salekhard), and Taymyrskiy. Formerly these people were known as the western or more civilized, and the eastern or "wild" Samoyeds, the Ural Mts. being their dividing line. Now the eastern also are losing their originality in the process of acculturation and Russification. Many details are given on the Samoyed reindeer economy, dwellings, year-round use of the sledge, clothing and food. The Samoyed fur coat (*malitsa*), footgear (*piny*, or *kisy*) and food (raw frozen meat or fish) have been adopted by Russians. The system of kolkhozes (since 1930) has eliminated the difference between coastal and tundra Samoyeds. Only those who are assigned to tend reindeer, still nomadize with their families following the herds; the rest of the kolkhoz population are permanently settled in a village, and they hunt, fur farm, raise potatoes and cabbage if possible. Trading centers are extending north. A newly built railway connects Salekhard with Vorkuta. The women folk have now more free time, illiteracy diminishes (Samoyed books are printed in Russian characters), boarding schools are established, and other blessings of civilization, it is stated, are coming to the far North.

37437. SJÖGREN, ANDREAS JOHAN, 1794-1855. Gesammelte Schriften. Bd. I, Historisch-ethnographische Abhandlungen über den finnisch-russischen Norden. Petersburg, Akademie der Wissenschaften, 1861. vi, 678 p. Text in German.

Title tr.: Collected essays, v. I, Historico-ethnographic essays on the Finnish-Russian North.

Contains twelve articles edited by A. Schiefner, most of them reprinted and some translated from Swedish. Among them are four on northern peoples:

Bericht über drei Werke des Pastors Jac. Fellmann in lappischer Sprache (Communication on three works of Pastor J. Fellman in Lappish) p. 61-69. Originally pub. in Swedish in: *Åbo tidningar* 1826, no. 67, 69, 70, this is a short and negative review of three devotional books published in 1825; Fellman's lack of a thorough knowledge of the Lappish language is shown.

Bericht über die wissenschaftliche Reise zur Untersuchung der finnischen Völkernschaften in Russland (Report on a scientific journey for the investigation of the Finnish peoples in Russia) p. 71-84. It was originally pub. in *St. Petersburger Zeitung* 1829, no. 123-125. Account is given of author's 18,432-verst trip, sponsored by Russian authorities, in 1824-1828, to Karelia, Lapland, Governments of Arkhangel'sk, Perm and Kazan, inhabited by Karelians, Finns, Lapps, Samoyeds, Zyryans, Votyaks and Cheremis. Their language, place and family names, ethnographic, statistical and geographical data were collected, and local archives explored for documents. Material explaining the origin of the Chuds was particularly sought.

Aufzeichnungen über Gemeinden in Kemi-Lappmarken (Notes on the communities in Kemi Lappmark) p. 85-232, originally pub. in Swedish as: *Anteckningar om församlingarne i Kemi-Lappmark, Helsingfors*, 1828 (405 p.) copy at ICN. An historical geographic and economic survey, with vital statistics, data on health conditions, etc., and on the ethnography of local Lapps and Finns. This region which includes Kuusamo, Kemiträsk, Sodankylä, Kittilä, and Utsjoki, was traveled by the author in 1824-25.

Die Syrjänen, ein historisch-statistisch-philologischer Versuch (The Zyryans, an historical, statistical, philological essay) p. 233-459. A hitherto unpublished monograph on the Zyryan country and its people. Climate, industry, trade and, in detail with statistical data, the districts of Yaranak and Ust'sysol'sk are described. History and antiquities of the Zyryans, etc., are dealt with, on the basis

of the author's field work, studies of archives and literature.

37439. SKELLER, ERIK. Anthropological and ophthalmological studies on the Angmagssalik Eskimos. København, C. A. Reitzel, 1954. 211 p. illus. incl. 42 ports. on 7 plates, 4 text maps, graphs, 86 tables. (Meddelelser om Grønland. Bd. 107, nr. 4) approx. 300 refs.

Results of studies carried out in the Angmagssalik district of East Greenland (65°30'-66°30' N. 34°-39° W.). Eskimos and their culture, especially with regard to Angmagssalik, and earlier relevant anthropometrical measurements on Eskimo skeletons, and on living Eskimos, Indians and Mongoloids are described. The author measured 830 racially unmixed inhabitants out of the 1114 in the region. Thirty-three absolute measures and indices, also descriptive characteristics: shape of nose, jaw, hair, skin color, mongol spot, etc., are tabulated, and comparison made with other Eskimo groups (including West Greenlanders), Indians, and Mongoloids. Absolute measurements and indices, also descriptive characteristics of the exterior eye are similarly presented; investigation on refraction of the eye included normal (spherical) eyes, myopia and astigmatism; these data about the Eskimos were hitherto lacking. The so-called Eskimo fold was found in 58.8 percent of the Angmagssaliks above 15 years of age, and in 43.9 percent of all examined; the Mongol fold in 30.9 percent and 46.9 percent respectively.

37440. SKELLER, ERIK. Trichinose i Kutdligssat. (Ugeskrift for læger, 1948. v. 110, no. 21, p. 602-607, illus., tables) 8 refs. Text in Danish. Summary in English. **Title tr.:** Trichinosis in Kutdligssat.

Contains a description of an epidemic of trichinosis in Kutdligssat, West Greenland (70°05' N. 53°01' W.) in the spring of 1947, with case histories and information on clinical course, therapy, etc. Out of 132 sick Greenlanders, 11 died, with trichinella demonstrated in their cadavers. Walrus meat is suspected to be the cause of the epidemic. Pronounced exanthemas and characteristic edemas were typical of this epidemic.

SKINNER, D. E., see Alaska. Development Board. Alaska's dollar shortage. 1952?. No. 33186.

37441. SKJESETH, STEINAR, and H. SØRENSEN. An example of granitization in the central zone of the Caledonides of northern Norway. (Norway. Norges geologiske undersøkelse, 1953. nr. 184, Årbok 1952, p. 154-83, 15 illus. on 3 plates, 2 maps (1 fold.), 2 cross-sections (1 fold.), diagr. 17 refs. Text in English. Summary in Norwegian.

A detailed study at Reindalsvik, Holandsfjord, Nordland (66°42' N. 13°39' E.), was made by the authors in summer 1952 for the Geological Survey of Norway. An outline of the regional geology is given, and the petrology, granitization processes, and structures of the area are discussed in some detail. "It is concluded that the large masses of granite overlying the paragneisses may be the erosional remnants of a former extensive sheet of granite corresponding to the sheets of granite in Sweden in the eastern part of the Caledonides. The thrusting cannot be proved in the area in question as folding and granitization have obliterated all traces of cataclastic deformation."—From author's abstract.

37447. SLATER, JAMES A. Notes on the genus *Labops*, Burmeister in North America, with the descriptions of three new species. Hemiptera: Miridae. (Brooklyn Entomological Society. Bulletin, June-Oct. 1954. new ser., v. 49, no. 3, p. 57-65; plates 2-3; no. 4, p. 89-94) 9 refs.

Distribution, host plants, brachypetry and immature stages of this bug are noted; a key to the species is given, and eight described, among them *L. verae* from Mackenzie District, and *L. burmeisteri* from Yukon Territory, Mackenzie delta, and Alaska. *Copy seen:* DSI; MH-Z.

37448. SLAUGHTER, L. Über die zeitlichen Störungen der magnetischen Deklination im Gebiete Nordeasiens und Grönlands. (Geofisica pura e applicata, Milan, May-Aug. 1954. v. 28, p. 37-46, 7 fig., table) 6 refs. Text in German. Summary in Spanish. *Title tr.:* Periodical disturbances of magnetic declination in the region of northern Eurasia and Greenland.

The daily, seasonal, and 11-year period course of periodical disturbances of mag-

netic declination is depicted for several arctic stations, mainly on the basis of statistical investigations of the number of disturbed hourly means. Data were obtained from the Auroral Observatory at Tromsø Results of observations 1930-1951 and the Second International Polar Year 1932-1933, observatories at Thule, Godhavn, Julianehaab, Spitsbergen, Tikhaya Bukhta, and Matochkin Shar. The asymmetry of the east and west deviations is a general peculiarity of this disturbance phenomenon. Some stations presumably have strong local influences.

37449. SLOCOMB, A. G. The helicopter on a photo-topographical survey. (Canadian surveyor, July 1949. v. 10, no. 1, p. 1-9)

A test was carried out in Aug. 1948, by the Topographic Division, British Columbia Dept. of Lands and Forests, in the Skagit Range of British Columbia to determine if the helicopter could be used effectively to land survey personnel and equipment on top of ridges and peaks and return them to base camp. Analysis is given of loads, and of flying, landing and take-off technique. Thirty landings were made; one of the best days' work is reported, and the helicopter's advantages and disadvantages are stated (by D. N. Kendall). Brief account is presented by F. P. Steers (Canadian Geodetic Survey) of primary triangulation operations using a helicopter along the Alaskan Highway in summer 1948.

37453. SMILEY, CHARLES HUGH,
1903- . Atmospheric refraction at low
altitudes. Toronto, Oct. 1950. 9 p. table.
Mimeographed. (Royal Meteorological
Society. Canadian Branch. Papers. v. 1,
no. 7) 11 refs.

"Résumé of approximately 35,000 ob-
servations of the vertical diameter of the
sun at low altitudes taken in Rhode
Island 1946, Brazil 1947, Antaretic 1947-
48, Arctic [Eureka and Resolute; during
voyage from St. John's, Nfld. to Hopedale,
Labrador] 1949, Alaska and the West
Coast of the United States 1949, across
the North Pole [Ptarmigan flights] 1949
and on Mt. Washington 1950. The fol-
lowing sources of error in the observations
are examined: index correction of the
 sextant and variation in it, the backlash,
the personal equation of the observer and

its variation, and the Polaroid filters.
Author concludes that it is not feasible
to base a new theory of atmospheric
refraction on the data now available
because the polar regions are not suffi-
ciently represented." Comparable values
of refraction corrections for the tropics
are given.—*Meteorological abstracts & bib-
liography*, Nov. 1951. v. 2, no. 11, p. 913.

37454. SMILEY, CHARLES HUGH,
1903- . Critical tables for correcting
observed altitudes for atmospheric refraction
in polar latitudes. (Navigation,
Mar. 1947. v. 1, no. 5, p. 109-110, table)

Contains a critical table for the range
of altitudes 2°-10° for the polar regions,
temperature 0° F. and barometric pres-
sure 29.5 in. A similar table for tempera-
ture latitudes is included for comparison
and is based on Weems' *New line of*
position tables. Both are for 0 ft. height of
eye. The polar critical table is based on
data from temperate latitudes. Obser-
vation of the vertical diameter of the sun
over the range of altitudes taken by the
sun in the Arctic or Antaretic is suggested
to obtain information concerning the
probable size of abnormal deviations in
refraction.

no. 28. p. 250-74, illus.) 22 refs. Text
in Russian. **Title tr.:** Contribution to
the question of shamanistic images. In

his: Essays on the ancient and medieval history of peoples of the Middle Volga and Kama region.

Contains classification, description, dating and illustrations (59) of bronze plaques, carved and engraved in representation of naturalistic and fantastic figures of birds, mammals, man, and hybrid features of animals and man. The objects were excavated in three former sacrificial places, pits and caves filled with bones. The richest was that discovered at Glyadenovo on the Nizhnyaya Mullyanka River and dated from 500 B. C. to 600 A. D., a place long in use. The images on the plaques probably represent lords of nature and protectors of man. Their connection with shamanistic ideology and cult is stressed; such plaques were often hung on the shaman's costume. The importance of birds, the bear, dragon and horse on the plaques are especially investigated. Silver cups and saucers used for cult purposes, engraved with similar figures are also considered. The influence of Scythian, Iranian, and Byzantine art and style upon these objects is discussed. The same kind of plaques and vessels are used by recent Ostyaks and Voguls, to whom, among other Ugric peoples, therefore, these excavated objects are attributed.

37459. SMIRNOV, NESTOR ALEK-SANDROVICH. Grenlandskii tfulen',

ili lysun. (Priroda, 1927, no. 5, col. 373-82, text map) Text in Russian. **Title tr.:** The Greenland or harp seal.

Contains data on the life history and biology of Greenland seals, their division into three principal herds: Newfoundland (*Histiophoca groenlandica groenlandica*), Jan Mayen (the same race) and the White Sea (*H. groenlandica oceanica*). The last group is treated in detail, with data on the propagation, growth, feeding, moulting, migration, enemies, etc. The danger of extermination of this valuable animal by indiscriminate and wasteful killing is stressed.

Copy seen: DLC; MH.

37460. SMIRNOV, NESTOR ALEK-SANDROVICH. Uchast' kitov. (Priroda, 1928, no. 11, col. 975-88, illus.) Text in Russian. **Title tr.:** The whale's future.

Contains a review of the characteristics of nine species of whales (illus.), historical notes on the development of whaling, modern methods, statistical data on the catch (1910-1918) in Arctic and Antarctic and on production of whale oil (1924-28). Restriction on an international basis, of the killing of females and calves is recommended to prevent the wholesale extermination of whales.

SMITH, ALENANDER HANCHETT, see Lange, M., and A. H. Smith. *Coprinus ephemerus* group. 1953. No. 35791.

37461. SMITH, ANGUS and J. G. FAIRER. Hibernation anesthesia in major surgery. (British medical journal, Dec. 1953. v. 2, p. 1247-48) 6 refs.

Contains a brief account of a simplified "lytic cocktail" method producing autonomic blockade and preventing surgical shock during and following major operations. Some of the 36 cases are presented.

Copy seen: DSG.

37462. SMITH, AUDREY URSULA, and J. SMILES. Microscopic studies of mammalian tissues during cooling to and rewarming from -79° C. (Royal Microscopical Society. Journal, Dec. 1953. v. 73, pt. 3, p. 134-39, illus.) 26 refs.

Contains a study on the effects of cooling and rewarming of corneal epithelium and testicular tissue in the presence or absence of glycerol. In the latter case, cells froze internally and disintegrated on thawing; in the presence of glycerol,

many cells did not appear to freeze and were morphologically unchanged after thawing.

Copy seen: DSG.

37463. SMITH, AUDREY URSULA, and others. Resuscitation of hamsters after supercooling or partial crystallization at body temperatures below 0° C. (*Nature*, June 12, 1954. v. 173, no. 4415, p. 1136-37, illus.) 8 refs. *Other authors:* J. E. Lovelock and A. S. Parkes.

Contains an account of experiments and observations on animals supercooled or solidly frozen and finally resuscitated. After cessation of respiration in ice water, the hamsters were transferred to a 50 percent propylene-glycol bath of -4 to -7° C., in which some animals supercooled down to -5.75° C. but the majority froze peripherally and progressively until they were "wood-like to the touch." Complete revival was achieved in both supercooled and frozen animals. Extremities were severely frozen, but damage due to this cause was seen only in two out of 21 animals revived completely, some of which were kept "for many weeks afterwards in apparently normal health."

Copy seen: DLC.

37464. SMITH, AUDREY URSULA, and C. POLGE. Survival of spermatozoa at low temperatures. (*Nature*, Oct. 21, 1950. v. 166, no. 4225, p. 668-69) 21 refs.

Contains a review of studies, and conditions under which spermatozoa survive low temperatures. Fertility of the semen as affected by low temperature and by various substances added to overcome the latter are also considered. Spermatozoa of man, domestic and laboratory animals, and fowl are considered.

Copy seen: DLC.

37465. SMITH, AUDREY URSULA. The use of glycerol for preservation of living cells at low temperature. (*Royal Society of Medicine, London. Proceedings*, Jan. 1954. v. 47, no. 1, p. 57-60), 32 refs.

Contains a review of research on survival of cells at very low temperatures (-79°-190° C.) especially of spermatozoa and mammalian eggs, and the practical application in cattle-breeding. Also, the preservation at low temperatures of ovarian, and testicular tissue, adrenal, pituitary, etc. Slow cooling proved generally essential; each tissue required different media into which the glycerol is

incorporated, different storage temperatures, etc.

37466. SMITH, LAWRENCE WELD, 1895- . Refrigeration in cancer; pathologic observations in 100 advanced cases. (*New York State journal of medicine*, Sept. 1940. v. 40, no. 18, p. 1355-61) 7 refs.

Contains a report on the first 100 cases of cancer treated with general and/or local hypothermia. In accessible tumors treated with local reduction of temperature, a "regular regression in the size" was observed. General hypothermia produced a "variable" effect upon distant tumor metastases. No significant changes were observed in the non-neoplastic tissues in cases of general hypothermia, but some physiologic functional disturbances were in evidence.

37467. SMITH, LAWRENCE WELD, 1895- , and T. FAY. Temperature factors in cancer and embryonal cell growth. (*American Medical Association. Journal* 1939. v. 113, p. 653-60, illus.) 7 refs.

Referring to the relative infrequency of primary and metastatic carcinoma in parts of the body having a reduced temperature and to observations that below a certain "critical" temperature young, undifferentiated cells become inactive and degenerated, the authors present 38 cases with cancer, in which local and general hypothermia ("hibernation") has been applied as therapeutic means for up to five days; the body temperature was lowered to 85° or 90° F. Information on the method, clinical and local results, general condition, etc., is included. This is the first attempt to treat neoplasms with hypothermia.

1931, Bull. no. 844, 1934, p. 83-117;

1943-44, Bull. no. 947-A, 1946, 6 p.)

Continuation of the annual series of administrative reports begun by Alfred H. Brooks, q. v. Summary by the geologist-in-charge is given of each year's work of the topographic, engineering, and geological parties in various parts of Alaska, as well as the office activities contingent to the work of the Alaskan Branch. The report for 1925 (Bull. 792) was made by Fred H. Moffit. No administrative reports were issued after that for 1931 (in Bull. 844), until 1946 when a brief summary of the field and office activities of the U. S. Geological Survey in Alaska in 1943 and 1944, by John C. Reed, was released (Bull. 947-A).

37470. SMITH, PHILIP SIDNEY, 1877-1949. The Alatna-Noatak region. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1911. Bulletin, 1912, no. 520, p. 315-38, fold. map)

Describes the geography and geology of this region in northwestern Alaska, between the Noatak River, which drains westward into Kotzebue Sound, just north of the Arctic Circle, and the Alatna River, a northern tributary of the Koyukuk. The mineral resources as known in 1911 of both the Alatna and Noatak basins, are outlined. These include gold lodes and placers, copper deposits (chalcocopyrite) native copper (float), antimony lodes (stibnite), and silver-lead deposits. No productive mining had yet been done; possibilities for future development of the mineral deposits are discussed. cf. *Arctic Bibliography*, No. 16326, 16337.

37472. SMITH, PHILIP SIDNEY, 1877-1949. Gold fields of the Solomon and Niukluk River basins. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1906. Bulletin, 1907, no. 314, p. 146-56)

Contains a short summary of the dredging, lode mining, and placer mining developments in 1905-1906, in the Solomon River basin, southern Seward Peninsula. More detailed descriptions are given of the placer deposits of the Niukluk River (64°48' N. 163°28' W.) and its main productive tributaries—Fox River, Melšina, Ophir, Goldbottom and Elkhorn Creeks, and Casadepaga River. Gold lode discoveries in the Niukluk River basin are also described, and the possible association of lodes and contacts briefly considered. Recent developments on the silver-bearing galena vein on Omalik Creek, a branch of Fish River are given. The discovery of this vein, the first lode discovered in Seward Peninsula, dates back to 1881. *Copy seen:* DLC.

37473. SMITH, PHILIP SIDNEY, 1877-1949. Lode mining in the Ketchikan region. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1913. Bulletin, 1914, no. 592, p. 75-94)

Discusses the general mining conditions in this region in 1913, then describes the distribution of the mines and prospects and the occurrence and operations at various copper and gold deposits.

Copy seen: DLC.

37474. SMITH, PHILIP SIDNEY, 1877-1949. Lode mining near Fairbanks. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1912. Bulletin, 1913, no. 542, p. 137-202, sketch maps, section fold. map)

The general geology of the region and the condition of lode mining are outlined;

and detailed descriptions given of many gold quartz lode mines and prospects. Discussion follows of the future of lode mining in the Fairbanks district in central Alaska, covering the areal extent of mineralization, its lower limit, character of mineralization in depth, tenor of the ore, and mining costs.

37475. SMITH, PHILIP SIDNEY, 1877-1949. Mineral resources of the Lake Clark-Iditarod region. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1914. Bulletin, 1915, no. 622, p. 247-71, fold, map, fig.)

Contains the results of a field investigation of the geology and mineral resources made in 1914 by the author in the Lake Clark-Iditarod region of southwestern Alaska. Discusses the geography, geology, and the general economic conditions. Describes the mineral resources: gold, copper, antimony, silver-lead, molybdenum, manganese, and coal deposits; and the water resources. Author's bulletin on this area in *Arctic Bibliography*, No. 16325.

37476. SMITH, PHILIP SIDNEY, 1877-1949, and H. M. EAKIN. Mineral resources of the Nulato-Council region. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1909. Bulletin, 1910, no. 442, p. 316-52, fold. map, maps, diagr.)

Contains results of an exploration in 1909 in the country between Nulato on the Yukon River and Council on the Niukluk River, largely in the drainage areas of Norton and Golofnin bays on southeastern Seward Peninsula. The geography and geology of this region are described. Attention is called to the limited gold resources in nonmetamorphosed sediments east of the Koyuk River, and to the much more extensive gold placer and lode occurrences in the area of metamorphic rocks in the western part of the region. The Omilak silver-lead lode northeast of Council is described, as are also several gold lode prospects, and some coal deposits in the Norton Bay region.

1939, Bull. no. 926, 1942, p. 1-106;
1940, Bull. no. 933, 1944, p. 1-102;
1941-42, Bull. no. 943, 1945, p. 1-23)

Prepared by the Chief Alaskan Geologist, Philip S. Smith, successor to A. H. Brooks, q. v., except 1925 by Fred H. Moffit. Each year's report comprises discussions of the distribution of the mineral deposits of Alaska and developments in the various mineral industries during the year. Charts showing trends in annual gold and copper production since initiation of production are given in most of the chapters. Notable features of specific years' reports are as follows: in that for 1929 (Bull. 824) a map of coal property at Harkrader on Admiralty Island, and description of the property; in report for 1936 (Bull. 897) notes by S. R. Capps on "Lode mining in the Nuka Bay district;" in 1937 (Bull. 910) notes by F. H. Moffit on a molybdenite deposit on Rock Creek in the upper Copper River valley.

Late in 1944 the responsibility of recording Alaska mineral production was transferred to the U. S. Bureau of Mines.

37478. SMITH, PHILIP SIDNEY, 1877-1949. Notes on mining in Seward Peninsula. (*In:* U. S. Geological Survey. Mineral resources of Alaska in 1911. Bulletin, 1912, no. 520, p. 339-44)

Describes mining developments in 1911 on the gold, tin, antimony, and graphite deposits on Seward Peninsula. Discusses the gold dredging operations and contains a list of dredges in operation on Seward Peninsula in 1911. A dredge was in operation on the ten placers of Buck Creek, and a tin lode mine was reopened and operated near York. Mining operations were in progress at a gold-bearing antimony (stibnite) lode mine on Manila Creek, and also at the graphite mine near Imuruk Basin.

Presents an analysis of the U. S. Geological Survey statistical records regarding the production of lode gold from Alaska for the period 1882-1937, inclusive. Discusses the methods used in collecting and tabulating the information, limitations governing the presentation of the records, their degree of accuracy, areal subdivisions adopted, summary of early history of lode-gold mining in the Territory, its total production of lode gold, production by regions, production regions, districts, and areas to the close of 1905, and since 1905.

Presents summary tabulation of annual placer gold production of Alaska by districts from 1880 to 1930, with a discussion of the statistics. Tabulated data are also given on placer-gold production by dredges from 1903 to 1930.

Copied seen: DLC.

37481. SMITH, PHILIP SIDNEY, 1877-1949, and A. G. MADDREN. Quicksilver deposits of the Kuskokwim region. (In: U. S. Geological Survey. Mineral resources of Alaska in 1914. Bulletin, 1915, no. 622, p. 272-91, figs.)

Presents data regarding the occurrence of quicksilver in the Kuskokwim region gathered by the authors in the course of investigations in 1914. Gives historical sketch of previous investigations. Describes Parks quicksilver prospect in central Kuskokwim basin, the deposit near Kolmakof, 100 miles downstream from the Parks prospect, and miscellaneous other deposits. Discusses the origin and possible extent of the quicksilver area, the possible future areas, and the economic conditions affecting the production of quicksilver.

37484. SMITH, PHILIP SIDNEY, 1877-1949. Surveys in northwestern Alaska in 1926. (In: U. S. Geological Survey. Mineral resources of Alaska in 1926. Bulletin, 1929, no. 797, p. 125-42, fold. map)

Presents the results of a field investigation by the author in 1926, of the area between the western boundary (southward from Icy Cape) of the U. S. Naval Petroleum Reserve No. 4, and the Point Hope - Cape Lisburne area to the west. Gives the narrative of the 1926 expedition and describes the topographic and geologic surveys made. Discusses possibility of finding workable metallic mineral deposits—gold, copper, and lead—and describes the petroleum and coal possibilities of the region. *Copied seen:* DLC.

37485. SMITH, ROBERT H., and E. L. SUTTON. Waterfowl breeding ground survey in northern Alberta, the North-

west Territories, and the Yukon, 1953. (In: U. S. Fish and Wildlife Service. Waterfowl populations and breeding conditions, summer 1953, *pub.* 1954. Special scientific report: Wildlife no. 25, p. 7-15, text map, 13 tables)

Report on sixth consecutive survey of this region. Area covered included the Mackenzie River drainage from 54° N. to the arctic coast, northern Yukon Territory, Anderson River basin (northwest Mackenzie District), Thelon River (Keewatin District) from near its source to Baker Lake, southern Victoria Island, and Perry, Ellice, and Kugaruk Rivers (eastern Mackenzie and western Keewatin Districts). Tables show percent species composition and numbers of ducks, geese, and swans per sq. mi. in each area studied, for years 1948-1953 (in some cases 1949 or 1950-1953). **Copy seen:** DLC; DF.

Presents the results of a field investigation by the authors, of the geography, geology, and mineral resources (petroleum and coal) of the Puale (formerly Cold) Bay - Chignik district on the southeast side of the Alaska Peninsula west of Kodiak Island. A summary of previous investigations is given, as well as the present one. **Copy seen:** DLC.

37487. SMITH, WALTER R. The Cold Bay-Katmai district. (In: U. S. Geological Survey. Mineral resources of Alaska in 1923. Bulletin, 1925, no. 773, p. 183-207, fold. sketch map)

Contains the results of a field investigation by the author in 1923, of the geology and mineral resources of the Puale (formerly Cold) Bay-Katmai district at the northern end of the Alaska Peninsula in southwestern Alaska. Summarizes the work of the previous and the present investigations of the area. Describes the geography, geology, and mineral resources of the district, and discusses the indications of oil. A brief description is given also of a gold placer deposit at Cape Kubugakli. **Copy seen:** DLC.

37488. SMITH, WALTER R. Geology and oil development of the Cold Bay district. (U. S. Geological Survey. Mineral resources of Alaska in 1924. Bulletin, 1926, no. 783, p. 63-88, fig., fold. map)

Presents the results of the authors' field investigation of Cape Kekurnoi, the Salmon Creek-Bear Creek anticline, the Ugashik Creek anticline, the shores of Wide Bay, and an area along the north side of Becharof Lake (approx. 58° N. 156° W.) on Alaska Peninsula. Gives brief review of the geography, and general geologic features of the Cold (now Puale) Bay region, with geologic details of structures and areal extent of formations mapped in field season of 1925, with descriptions of all occurrences.)

37489. ŠMITS, PETERIS. The language of the Olchas. (Riga. Universitate. Raksti; acta universitatis latviensis, 1923. v. 8, p. 229-88)

Contains ten riddles, two songs, three tales and a vocabulary of the Olcha language, collected by the writer in 1908 when living among the Olchas and Golds. The Olchas (about 1500 individuals) inhabit both shores of the Amur River approximately from the village Tlyars in the north to Maryinsk in the south. During their migration they have absorbed some Paleo-Siberian aborigines. Their language may be one of many Goldi dialects; it is closely related to the Manchu and should be considered as belonging to the large Tungus family.

37491. SNELL, ERIC SAXSON. The
relationship between the vasomotor re-
sponse in the hand and heat changes in
the body induced by intravenous infu-
sions of hot or cold saline. (*Journal of*
physiology, Aug. 27, 1954. v. 125, no. 2,
p. 361-72, 5 fig., 2 tables) 15 refs.

Contains a study aimed to elucidate
whether changes in blood temperature
produced by intravenous infusion of hot
or cold saline were reflected in changes
of cutaneous vascular tone. Hot infu-
sions produced vasodilatation, cold infu-
sions vasoconstriction in the hand. A
highly significant correlation was ob-
served "between the size of induced heat
change and the size of the vasomotor
response of the hand." These responses
are probably mediated through deeply
situated temperature receptors.

Contains chronological account from
first reports of a smoke cloud, Feb. 15 to
June 30, 1953. Observations of the
region (58°15' N. 155°05' W.) were
made from U. S. Navy aircraft Feb. 18-
Mar. 5 by R. R. McDonald (Geophysical
Branch. U. S. Geological Survey) and
Feb. 25-Mar. 13, also on June 17, by the
writer. Other information was supplied
by U. S. Navy, U. S. Air Force, and
U. S. Coast Guard personnel and com-
mercial aircraft. By June 17 an esti-
mated 300-400 million cubic yards of
rock material had been erupted. Con-

current activity of other events in the
Katmai region is noted.

**37493. SNYDER, GEORGE LEONARD,
1927-** . Trident Volcano observations.
(In: Luntney, R. S. and others. Interim
report on Katmai Project . . . Alaska.
Mar. 1954. p. 72-74)

Reconnaissance investigations consist-
ing of about 12 hours of aerial study and
four days ground observations were made
Feb. 21-Mar. 13, June 17, and Aug. 29-
Sept. 4, 1953, of Trident Volcano (58°15'
N. 155°05' W.) in order to observe a
volcanic eruption of moderate magnitude.
Although not directly connected with
the Katmai Project, the author used its
facilities for the preliminary ground
studies. Events to July 1, 1953 have been
published, No. 37492. Only a chronologi-
cal account of the author's activities is
given here.

liminary report on the geology of the
Aleutian I. 1954. No. 34829.

**37494. SNYDER, LESTER LYNNE
1894-** . Great-Plains races of sharp-
tailed grouse. (*Auk*, Apr. 1939. v. 56,
no. 2, p. 184-85)

Contains a list of five forms of the
grouse, *Pedioecetes phasianellus*, with data
on distribution. *P. p. kennicottii* native
to Alaska, Yukon and the Mackenzie
River region, and *P. p. phasianellus* from
northeastern Manitoba and northern
Ontario and Quebec, are included.

Copy seen: DSI; MH-Z.

**37495. SNYDER, LESTER LYNNE
1894-** . On the distribution of *Colym-
bus griseogen holböllii*. (Canadian field-
naturalist, Jan.-Mar. 1954. v. 68, no. 1,
p. 41-42) 20 refs.

Contains brief review of the literature
on the breeding range of the red-necked
grebe, with corrections of earlier accounts.
The species is not a summer bird of the
central and northeastern Canadian Arctic.
A line from the Mackenzie River mouth
via Favourable Lake and Sioux Lookout
in northwestern Ontario, to Whitefish
Lake, 50 miles west of Port Arthur, Ont.,
limits its northeastward front. It is an
irregular visitor to southernmost West
Greenland.

Copy seen: DGS.

**37496. SNYDER, LESTER LYNNE
1894-** . The snowy owl migration of
1941-42; a report of the Snowy Owl

Committee. (Wilson bulletin, Mar. 1943. v. 55, no. 1, p. 8-10, text map)

Contains notes on the 1941-42 migration which resulted in a concentration of snowy owl in the St. Lawrence valley, along the New England coast and the shores of the Great Lakes. Source of the flight was probably Baffin and Southampton Islands and the Hudson Bay region; its essential features are shown on text map (p. 10). **Copy seen:** DSI; MH-Z.

37497. SNYDER, LESTER LYNNE, 1894- . A study of the sharp-tailed grouse. Toronto, 1935. 66 p. front., illus. (Toronto. University. Studies. Biol. ser. no. 40) 39 refs.

In two principal parts, of which the first deals with the 1932 emigration of *Pedioceles phasianellus phasianellus*: the races and periodicity in this bird, its seasonal distribution; period of the flight, its progress and number involved; fall and winter habits of emigrating grouse (food tabulated, p. 21-22), specimens and distribution of records, final phases, possible causes and directional factors in the emigration of 1932. Pt. 2 includes data on the taxonomy and nomenclature, distributional notes (map 2), and remarks on the forms of the species. *P. phasianellus phasianellus* (northern sharp-tailed grouse) recorded in Central Alaska, northern Manitoba and northern Quebec, and *P. phasianellus kennicottii* from Mackenzie region, are included.

37499. SOCHAVA, VIKTOR BORISOVICH. Anabarskaja ekspeditsija Narkomzema i Instituta olenevodstva. (Leningrad. Arkhticheskij . . . institut. Biulleten', 1933. v. 3, no. 3, p. 49-51) Text in Russian. **Title tr.:** The Anabar Expedition of the People's Commissariat of Agriculture and the Institute of Reindeer Husbandry.

A party headed by the author, made a 2,000 km. trip in 1932 from the lower Lena to the Anabar River basin as part of a Yakutia pasture inventory, which was in turn part of a general registration of the U.S.S.R. pastures. The geomorphology, botany, local economy and reindeer husbandry of this little known area were investigated, and a map of it compiled; extensive lichen pastures suited to reindeer grazing, were found in the tundra; conditions among the 15.5 thousand head of reindeer and the causes of herd depletion were studied. **Copy seen:** DLC.

37500. SOCHAVA, VIKTOR BORISOVICH. Geobotanicheskaja karta SSSR. (Priroda, Oct. 1954, no. 10, p. 36-42, 2 fold. maps) Text in Russian. **Title tr.:** The geobotanical map of the U.S.S.R.

Contains a general description of the new map (in scale one: four million) of the vegetation (and glaciers) of the U.S.S.R., prepared by the Botanical Institute of the Academy of Sciences U.S.S.R. under direction of E. M. Lavrenko and V. B. Sochava. A fragment of this map and the entire map in smaller scale (one: 20 million) are reproduced here. On it, twenty-seven zonal groups of vegetative formations are indicated. The effect of physiography, permafrost, etc., on plant life, and the various subdivisions of the tundra and taiga zones are discussed (p. 37, 40-41). The tundra vegetation extends as far south as 59° N. where islands of it occur along the Okhotsk seacoast. **Copy seen:** DLC; MH.

37501. SOCHAVA, VIKTOR BORISOVICH. Gora Stadukhina na krajnem severo-vostoke Azii. (Priroda, 1930. no. 11-12, col. 1172-74) Text in Russian. **Title tr.:** Stadukhin Mountain in the far northeast of Asia.

Contains an orographic sketch of the northeastern section of Siberia bounded by the Kolyma River, Arctic Ocean, Bering Sea and Kamchatka Peninsula and Okhotsk Sea coast. The author discovered in 1930, in the middle course of Oklan River, a right tributary of the Penzhina, a mountain (ca. 975 m.) which he proposes to name, in the honor of the first explorer of this region, Mikhail Stadukhin. The mountain is described but its coordinates are not given. Notes on the vegetation are added.

Contains results of experimental study of these two arctic chickweeds cultivated in the Bergen Botanical Garden, the first from northern Canada, the second from West Greenland. **Copy seen:** MH-Z.

37507. SØMME, AXEL, 1899- . Jordbrukets geografi i Norge. Geography of Norwegian agriculture. Bergen, J. W. Eides Forlag, 1949, 1954. 2 v.: 414 p., 111 p. illus., maps (incl. 5 fold. in atlas), graphs (incl. 6 fold. in text), tables (Norges Handelshøyskole i Rekken. Geografiske avhandlingar. Skrifter, nr. 3) approx. 150 refs. v. 1 has text in Norwegian, summary (p. 364-99) in English. v. 2 (atlas) has text in Norwegian and in English.

Contains study of the "interaction of the physical background and the marketing possibilities" based on field studies and research of the Geography Dept. of the Norges Handelshøyskole during approx. 1943-1953. The atlas (pub. 1949), was based on the agricultural census of 1939. In the text volume (pub. 1954) the census of 1949 was used in

addition, and extensive comments are made upon the atlas. Climate, geology, also present position and trends in Norwegian agriculture are discussed; then follow reports on Norwegian agricultural regions. Section on North Norway (p. 210-30) includes information on: climate, soils, areas of cultivated and cultivable land, as well as types of crops, their requirements, distribution and production. Other general subjects discussed include: agriculture and food supply, transhumance, new-cultivation and reclamation, complementary occupations, and types of farms. Further material on northern Norway is found throughout the entire work.

37508. SØRENSEN, THORVALD JULIUS, 1903- . New species of *Hierochloë*, *Calamagrostis*, and *Braya*. København, C. A. Reitzel, 1954. 24 p. 6 illus. incl. 3 plates, 2 text maps. (Meddelelser om Grønland. Bd. 136, nr. 8) 16 refs.

Contains partial results of studies made by the author, C. A. Jørgensen, and M. Westergaard on Greenland plants. Systematic descriptions are given for two new species of grasses: *Hierochloë orthantha*, nov. sp. (formerly regarded as *H. alpina*); and *Calamagrostis poluninii*, nov. sp. (formerly regarded as *C. purpurascens*); also for *Braya intermedia*, nov. sp. (which may simulate an intermediate form between *B. linearis* and *Torularia* (*Braya*) *humilis*). Observations are made on the nomenclature of East Greenland *Torularia humilis*.

A. Reitzel, 1953. 179 p. illus. incl. 13 plates, 15 text maps. (Meddelelser om Grønland. Bd. 136, nr. 3) approx. 200 refs.

Systematic descriptions are given of the 12 species distinguished in Greenland (four new). Three species (two new) of special interest from eastern North Amer-

ica, are also described, and those of Novaya Zemlya and Vaygach Peninsula surveyed. All the arctic representatives of this genus of grasses are arranged in nine natural groups according to gross-morphological and leaf-anatomical characteristics. Seven of these are represented in Greenland. Origin and migration history of the Greenland species is discussed, and the specimens examined are listed by phytogeographic districts (with map). Greenland place names (152) used in the text are listed by E. Holtved in correct spelling.

37511. SOKOL, ANTHONY EUGENE, 1897- . The cruise of "Schiff 45." (United States Naval Institute. Proceedings, May 1951. v. 77, no. 5, p. 476-89, illus., 2 text maps)

The German auxiliary cruiser *Schiff 45* (*Komet*), commanded by Robt. Eyssen, was the first warship to negotiate the Northern Sea Route of the U.S.S.R. in time of war. German use of Russian bases in the Murmansk region in early 1940, and preparations for the *Komet's* passage are described. After waiting from July 15 to Aug. 13, 1940 in the Barents and Pechora Seas, the *Komet* started eastward, reaching Bering Strait on Sept. 5, covering 3,300 miles in 23 days. She was aided by the Russian ice-breakers *Lenin*, *Stalin*, *Malygin*, and *Kaganovich* in turn from west to east. Ice conditions are described and shown on a map of the route. The *Komet* left Anadyr' Bay on Sept. 6, passed the western end of the Aleutians, and reached the Pacific Ocean Sept. 10. The remainder of the article concerns activities of the raider in the Pacific

and Indian Oceans and in Antarctic waters. She reached Hamburg, Germany, on Nov. 30, 1941, completing a cruise around the world lasting 516 days and covering 87,000 nautical miles, in the course of which nine Allied ships were sunk and one captured.

Copy seen: DLC.

37512. SOKOL, ANTHONY EUGENE, 1897- . German attacks on the Murmansk Run. (United States Naval Institute. Proceedings, Dec. 1952. v. 78, no. 12, p. 1326-41, illus., text map) 4 refs.

Contains detailed account of the Murmansk Run of World War II, made by U. S., British, and lend-lease Russian ships in convoys carrying supplies to the U.S.S.R. Reasons for choice of this route (from Iceland, northeast and east along the edge of the pack ice in Greenland and Barents Seas to approx. the latitude of Murmansk, then south and southeast to Murmansk and Arkhangelsk) are discussed. Convoys began in late Aug. 1941 and continued until the war's end. Large-scale German operations against them started Mar. 1942. A chronological account of these attacks is given till the destruction of the German battle cruiser *Scharnhorst* in Dec. 1943, and conclusions are drawn concerning the effectiveness of German operations along the route. Supplementary information and corrections to this article are given by J. Meister in the *Proceedings*, Oct. 1953, v. 79, no. 10, p. 1133-34; and by P. von Handel-Mazzetti, July 1954; *ibid.*, v. 80, no. 7, p. 809-810.

37513. SOKOL'NIKOV, NIKOLAI PAVLOVICH. Bolēzni i rozhdenie chelovēka v selē Markovrē na Anadyrē. (Ėtnograficheskoe obozrenie, 1911. god 23, no. 3-4, p. 71-172) 5 refs. Text in Russian. **Title tr.:** Diseases and childbirth in the village of Markovo on the Anadyr'.

Contains a monograph based on author's experiences while living for ten years (1897-1907) in the Anadyr' region, especially in Markovo (64°40' N. 170°28' E.). The various diseases observed among the Russian population and the natives (Yukaghirs, Chuvantsy, Chukchis, Koryaks, and Lamuts) are described in detail. Their poor health and bad sanitary conditions, conceptions of the causes of diseases, popular medicaments, activity of shamans, making of sacrifices, etc., are sketched (with a section especially on natives, p. 129-35). Several specific cases of diseases are reported, especially syph-

ilis, giving case histories. In the second part, female hygiene, menses, customs and behavior in pregnancy, parturition and regulations after childbirth, baptism customs and care of infants are outlined (with a section on the natives, p. 166-72). Comment on this report was made by V. M. Zenzinov, q.v.

37515. SOKOLOV, ALEKSEI VLADIMIROVICH. Raboty gosudarstvennogo okeanograficheskogo instituta v severovostochnoi chasti Barentsova moria letom 1931 goda. (Leningrad. Arkticheskii . . . institut. Brulleten', 1931. v. 1, no. 11, p. 210-11, 231-32) Text in Russian. Summary in English. **Title tr.:** The work of the State Oceanographic Institute in the northeastern part of Barents Sea in summer 1931.

The Institute's research vessel *Persei* carried out several hydrological sections (locations indicated) in the area between Novaya Zemlya and Franz Joseph Land in Aug.-Sept. 1931, directed by the author. Preliminary results are stated: the waters of the northeastern part of Barents Sea are claimed not to belong to arctic waters, but to be chiefly influenced by the warm Atlantic waters entering from the north between Franz Joseph Land and Novaya Zemlya, the Atlantic waters from the south, except the surface layer, not reaching this part of the sea.

37522. SOLONENKO, V. P. Izlûkanie trappov i nekotorye osobennosti tektoniki Sibirskoi platformy. (Akademiâ nauk SSSR. Doklady, 1949, nov. seriâ, t. 67, no. 6, p. 1081-84, sketch map) Text in Russian. **Title tr.:** The eruption of traps and some peculiarities of the Siberian platform's tectonics.

Contains a criticism of the opinion that Siberian traps were formed during the subsidence of the Tungus basin;

the author thinks that the effusion of traps took place during the raising of the Tungus basin and that the magmatic processes were caused not by the fluctuation of the earth core but by the changes in the structure of basalt rocks which led to the discharge of enormous amount of energy. *Copy seen:* DLC; MH.

37523. SOLOT, SAMUEL B., and T. J. KEEGAN. An extension to 100,000 feet of the U. S. A. F. cold and hot atmospheres. (American Meteorological Society. Bulletin, Dec. 1954. v. 35, no. 10, p. 472-75, graphs, 3 tables) 9 refs.

"For the purpose of setting up engineering standards, the U. S. A. F. was requested to determine standard cold and hot atmospheres from 60,000 feet to 100,000 feet. Data were too scarce to use conventional statistical techniques and an alternate method is presented herein. [It involved special study of extreme temperatures from selected sample of arctic and tropical stations, including Barrow, Resolute, Mould Bay, Thule, and Eureka.] Included are graphs of the cold and hot atmospheres for each of four latitudinal zones [including 60°-90° N.] from sea level to 100,000 feet, and a table of heights and temperatures at critical points along straight-line envelopes enclosing all zonal curves."—*Author's abstract.* *Copy seen:* DGS.

37524. SOLOUKHIN, VLADIMIR. "У нас в Нар'ян-Маре" . . . (Ogonëk, Apr. 1953. no. 15, p. 4-5, illus.) Text in Russian. *Title tr.:* "In our Naryan-Mar" . . .

Story of two young physicians, women, who made a trip by sea from Arkhangel'sk to Naryan-Mar, where they were to begin their practice of medicine; the importance of Naryan-Mar as an educational center in Nenečs National District is noted. *Copy seen:* DLC.

37525. SOLOUKHIN, VLADIMIR, and G. SAN'KO. "Vsem bortam!" (Ogonëk, Jan. 1954. v. 32, no. 4, 5 col. illus. on plate) Text in Russian. *Title tr.:* "To all ships."

Colored photographs taken by the second author, of an unidentified polar station on the coast (or island) of Kara Sea, and of its personnel: a meteorologist, hydrometeorologist, aerologist and radio operator, each shown at work. Brief explanatory notes accompany the illus. *Copy seen:* DLC.

37526. SOLOV'EV, A. N. Polární issledovatel' Georgii Sedov. (Nauka i zhizn', June 1949. t. 16, no. 6, p. 43-45, port.) Text in Russian. *Title tr.:* The polar explorer Georgii Sedov.

A short biographical sketch summarizing Sedov's arctic explorations, occasioned by the 35th anniversary of his death; the continuity of Sedov's work in Soviet arctic achievements is emphasized. *Copy seen:* DLC.

37527. SOLOV'EV, F. Ostatki shamanstva u Yakutov. (Sbornik gazety Sibir', 1876. t. 1, p. 409-419) Text in Russian. *Title tr.:* Remnants of paganism among the Yakuts.

Contains a characterization of Yakut shamanism and conception of the human soul. Good spirits (9) and demons (9) are listed with notes on their functions and the sacrifices. The failure of first Russian missionaries among the Yakuts and possible advantages of the Christian religion are stressed. A shaman's grave found by the writer at Namskiy ulus is described; a Tungus legend on the journey and rebirth of the human soul is given (p. 411 footnote).

Contains anthropometric data, and some comments as to the racial affinities of Zyryans in the village Muzhi on the Ob' (about 65°21' N.), investigated by the writer in 1880. Although speaking a Finno-Ugrian language, the Zyryans were racially quite different from Ostyaks

and Voguls: their physical appearance rather resembles that of the Finns from Tavastland. **Copy seen:** DLC.

37529. SOMMIER, STEPHEN, 1848-1922. Ostiacchi e samoiedi dell' Ob. (Archivio per l'antropologia e la etnologia, 1887. v. 17, p. 72-222, tables, 17 illus., 3 plates, col. map) Text in Italian. **Title tr.:** Ostyaks and Samoyeds of the Ob'.

Contains anthropological results of author's journey in Siberia in 1880. He traveled by boat from Tobol'sk to the mouth of the Ob', then about 150 km. along the southern shores of the Yamal Peninsula, and back to Tobol'sk, altogether some 2,600 km. Anthropological measurements were made on 138 living Ostyaks and 109 Samoyeds; also 37 Ostyak and 19 Samoyed skulls taken from old graves. Numbers and geographic distribution of Ostyaks and Samoyeds at this time are given, as well as notes on the geography, climate, flora and fauna of the region. An extensive historical sketch of the Ostyak-Vogul and Samoyed peoples, their commercial relations, archeology, and history of investigation are included. Physical characteristics of Ostyaks and Samoyeds are dealt with at length, and data are given on their physiology, pathology, and demography. **Copy seen:** DLC.

37530. SOPER, JOSEPH DEWEY, 1893-. Discovery of the breeding grounds of the blue goose. (Canadian field-naturalist, Jan. 1930. v. 44, no. 1, p. 1-11, sketch map) Also issued as separate pamphlet by Canada, Dept. of the Interior, Northwest Territories and Yukon Branch.

Contains account of the writer's trips to Baffin Island in 1923 (as naturalist of the National Museum of Canada's Canadian Arctic Expedition), summer 1924 to fall 1926, and summer 1928 to late Aug. 1929. Breeding grounds of the blue goose were found in the Bowman Bay region of southwest Baffin Island (65°33' N. 73°40' W.) in 1929. The spring (June) migration, nesting,

moulting, and the young are described. Notes are given on association of blue geese and lesser snow geese and the distribution of these species on Baffin Island. **Copy seen:** DGS.

37531. SOPER, JOSEPH DEWEY, 1893-. Waterfowl and other ornithological investigations in Yukon Territory, Canada, 1950. Ottawa, Sept. 1954. 64 p. 16 illus., text map, tables. Mimeographed. (Canada. Wildlife Service. Wildlife management bulletin, series 2, no. 7) 9 refs.

Contains results of the writer's investigations for the Canadian Wildlife Service, June 12-Aug. 13, 1950, in southern and central Yukon. His field work carried out by boat, horseback, aircraft, and on foot, covered 8,550 miles. A brief description is given of topography, vegetation and climate, waterfowl habitats and population. Data were secured by transects on the water bodies and observations at random while traveling. Brief notes are given on waterfowl and other birds in each district visited in turn, and transect data are presented in tables; 153 species seen (not collected) are listed, with notes on locality, also a few references to records by other observers. **Copy seen:** CaMAI.

t. 3, no. 4) Text in Russian. *Title tr.*: A journey to the Voguls.

Contains a journal of a three-man expedition, June 23 - July 18, 1872, organized by the Kazan' Society of Naturalists. Traveling by boat, horseback and on foot, the party reached the region of the upper Loz'va and the eastern slopes of the Ural Mts. The author, a botanist, studied (but does not report here) plants in the Ural region, and their use by the natives for food and medicaments. Ethnological notes are given on the Voguls' occupations (hunting and fishing, gold mining), their tools and implements, clothing and hair dress, food, songs and music (p. 29-34), physical characteristics, relations with and exploitation by Russian merchants and gold miners (p. 50-54). A vocabulary of about 300 words is given (p. 35-43). *Plates* show Vogul *tamgas*, idols, tools and utensils, arrow points, a *shangar* (musical instrument), author's drawings of Vogulian types and landscapes, and a map of the visited region. The physician of the party, N. Maliev, also reported in his *Otchet o vogul'skoi ekspeditsii*, 1873 (*Arctic Bibliography*, No. 30661).

37534. SOSNOVSKIĬ, G., and S. DOBKROKHOTOV. Ocherednye zadachi organizatsii transporta v Ĭakutii. (Sovetskoe kraevedenie, Aug. 1935, no. 8, p. 61-63, illus.) Text in Russian. *Title tr.*: Current tasks in the organization of transportation in Yakutia.

In 1934, 210 km. of roads were constructed in Yakutia, and 672 km. repaired. The 720 km. motor road from Aldan to the Bol'shoy Never railroad station came into operation, and a winter motor road Churan - Amga - Tommot - Aldan is to be ready for use in 1935; its continuation northward from the village of Pokrovskoye to Yakutsk (87 km.) will connect Yakutsk with the Aldan. A dependable river and land communication from Yakutsk westward to Vilyuysk and Suntar, and northward to the polymetallic deposits in the Verkhoyansk District is the next main task in organizing transportation. The regional students (kraevedy) are to help carry out these tasks by study of the needs and conditions of transportation in Yakutia.

37535. SOSNOVSKIĬ, G. Vnimanie kraevedov daurskoi listvennitsë. (Sovetskoe kraevedenie, Aug. 1935, no. 8,

p. 48-59) Text in Russian. *Title tr.*: Attention of regional students to the Daurian larch.

Yakutia has 126 million hectares of larch forest, or over 63 percent of all in Siberia, though only three percent is explored. The principal tree of these forests, the Daurian, or Yakut, larch (*Larix dahurica*), provides excellent timber for building and the furniture industry; its chemical processing yields many materials of great industrial value: rosin, turpentine, pitch, wood vinegar, glucose, gum. Proper utilization of the larch would cover all domestic needs for timber in Yakutia and provide various goods for export in quantity. Regional students' attention is directed to study of the larch.

Trudy Sovetskoi sekcii mezhdunarodnoi assotsiatsii po izucheniiu Chetvertichnogo perioda, 1937, vyp. 1, p. 278-95, illus., plate). Text in Russian. Summary in German, p. 293-95. *Title tr.*: New finds in the paleolithic site at the village of Mal'ta.

Contains results of excavations made by both authors in 1934 at this oldest northern Asiatic site, discovered in 1928 on the Belaya River, 85 km. from Irkutsk (53°08' N. 103°28'41" E.). Earlier excavations had been made in 1929-1930 and 1932; in 1934 digging was done in six places and 182 sq. m. of surface were explored. Numerous animal bones, many of them split, were found: they were mostly of reindeer and foxes, but some also of mammoth, bison, rhinoceros and other animals.

37540. SPAIGHT, J. M. 1867 and all that. (Royal Air Force quarterly, Jan. 1953. n. s., v. 5, no. 1, p. 17-20)

Alaska's strategic importance to the defense of the American continent is described. The purchase of Alaska in 1867 is attributed to the then existing friendship between the U. S. and Russia; Russian good will, said to have been expressed in 1863 when two Russian naval formations appeared unexpectedly

in New York and San Francisco, supposedly in support of the Union, is exploded as a myth: the Russian warships were sent into American ports for comparative safety in case of possible intervention of Britain and France in aid of Poland in revolt against Russia. The threat of Russian air attacks on Canadian oil and uranium sources if Alaska were in Russian possession is indicated.

Contains description of a *Heracleum sphondylium* (a cow parsnip, or hogweed), used by Kamchadals in the preparation

of food and at certain superstitious rites. The Cossacks discovered in 1732 that vodka could be made from this plant. The process of preparation and distillation are described, the qualities of this intoxicant, its large scale production and prices are indicated.

Copy seen: DLC.

37544. SPASSKIĬ, GRIGORIĬ IVANOVICH, d. 1864. Tungusy; istoricheskiĭ sviĕdĕniĭa o Sibirskikh Tungusakh voobshche i o Zabalkal'skikh v osobennosti. (Sibirskii vĕstnik, 1821, chast' 18, p. 339-48; 1822, chast' 19, p. 133-44, chast' 20, p. 255-68, 311-28) Text in Russian. *Title tr.:* The Tungus; historical information on the Siberian Tungus in general and on the Transbaykalian Tungus in particular. Pt. 2-4 (1822) have title: *Zabalkal'skie Tungusy* (Transbaykalian Tungus).

Contains general notes on this people, their dissemination, different branches and names, migration, historical relations with other peoples and ethnography. The writer, who says that his essay is based on an unknown author's manuscript, his own observations and on literature, deals especially with the southern or Transbaykalian Tungus in the region of Nerchinsk. Details are given on their religion, beliefs, and customs: conversion to Christianity, influence of Lamaism, the old cosmological ideas, belief in the soul and life after death, idolatry, shamanism, shamanistic garments and sacrifices. Their character and abilities, hospitality, physical appearance, diseases, food, clothing and dwellings are described. A sketch is given of their tribal organization, occupation (animal breeding and fishing), courting and marriage customs, childbirth, burial, pastimes and games, and notes are added on literacy, time reckoning and language. *Copy seen:* DLC.

37546. SPECK, FRANK GOULD-SMITH, 1881-1950. Culture problems in northeastern North America. (American Philosophical Society. Proceedings. 1926. v. 65, no. 4, p. 272-311)

Contains a general interpretation of the cultural peculiarities of Indians of the Montagnais-Naskapi group to the north and the Wabnaki group to the south of the St. Lawrence River. Ethnical origins, cultural affiliations and archaeological problems are discussed at length; a review is given of their material and spiritual culture, race, language and cultural patterns. The influence of climate upon the culture and mode of life is stressed; as are differences between "people of the interior" and "people of the sea." Contact and reciprocal influences between the Labrador Eskimos and these northeastern Algonkian bands are considered. The dual culture type in the far North is discussed: a coastwise one represented by the Eskimos and the littoral groups of northeastern Asia, and an interior one represented by the Athapaskan and Algonkian peoples of America and again by some tribes of eastern Siberia. *Copy seen:* DLC.

37547. SPECK, FRANK GOULD-SMITH, 1881-1950. Dogs of the Labrador Indians. (Natural history, Jan-Feb. 1925. v. 25, no. 1, p. 58-64, 7 illus.)

Two types of dogs are used, for hunting and sledge-driving; the former, a small decidedly vulpine race, represent an original strain; the latter are big hardy beasts with broad heads and short hair, whose affinity with European races, and occasionally with the Eskimo husky, is apparent. Physical characteristics, performance, etc., of both are described, the sledge dogs in greater detail, from the writer's observations over several years' research among the Montagnais and Naskapi, as well as his recent study of their institution of dog-driving. Some three thousand in number, these Indians range, hunting, over Northern Quebec and Labrador from James Bay to the Gulf of St. Lawrence. In the southern

and eastern area, their use of dogs for transport ("train dogs") and to some extent, the dog stock itself derives from contact with French Canadians; elsewhere (e. g. Lake Mistassini band) from Eskimos. Ancestors of these tribes, before contact with Eskimos and Whites, had hunting but not hauling dogs. A few traditional beliefs and tales on game animals and on the dog are added.

Copy seen: DLC.

37548. SPECK, FRANK GOULD-SMITH, 1881-1950. In Montagnais country. (In: E. C. Parsons, editor, American Indian life. New York, 1922, p. 87-97)

Contains a fictional account of the life of the Montagnais hunters and trappers, "the People of the Interior," who come every spring to a Hudson's Bay Co. post on the shores of Hudson Bay, "the great lake," to trade.

Copy seen: DLC.

37549. SPECK, FRANK GOULD-SMITH, 1881-1950, and L. C. EISELEY. Montagnais-Naskapi bands and family hunting districts of the central and southern Labrador Peninsula. (American Philosophical Society. Proceedings, Jan. 1942. v. 85, no. 2, p. 215-42, 3 sketch maps)

Contains data concerning the formation of bands investigated during 1922-1925 and previously reported (*Arctic Bibliography* No. 16614). Seven local bands are described in detail: their living place (map p. 216), social organization, rules of property and ownership, and cooperation between individuals which is considered typical for a hunting people. "Ethnological material dealing with hunting territory concepts . . . is presented and analyzed in the light of present knowledge of the ecological relationships existing between these people and their faunal and floristic background."—From author's abstract.

37550. SPEERSCHNEIDER, C. I. H. The state of the ice in Davis Strait, 1820-1930. København, G. E. C. Gad, 1931. 53 p. fold. graph, 3 tables. (Denmark. Meteorologiske institut. Meddelelser, 1931. Nr. 8)

From logbooks of vessels operating in Davis Strait (usually seven or eight annually) and other reports, brief information is given on ice conditions during several months each year, 1820-1896 (p. 11-46). Previous to that, information on 35 individual years at

intervals back to 1579 is offered from expeditions' statements, etc. (p. 7-10). For 1897 and subsequently, reference is made to annual ice reports in appendix of the Institute's *Nautisk-meteorologisk drøbog* (*Arctic Bibliography* No. 3874, 28731). Comment upon ice conditions and movements in the period 1890-1930 (p. 46-48) is followed (p. 48-50) by statements concerning certain years during 1747-1850. A comparison is made of the state of the ice in different years (p. 50-51); in general, the period 1820-1860 was poor in ice, 1860-1900 rich in ice, and 1900-1930 again poor.

37551. SPENCER, ARTHUR COE, 1871- The Treadwell ore deposits, Douglas Island. (In: U. S. Geological Survey. Mineral resources of Alaska in 1904, Bulletin, 1905, no. 314, p. 69-87, map, diagrs.)

Contains a brief discussion of the geology of the region and an extensive description of the post-Lower Cretaceous gold-bearing ore bodies on Douglas, one of the smaller islands in the Alexander Archipelago, Southeast Alaska. These consist of secondary mineralized albite-diorite dikes. The ore is mainly dike rock impregnated with sulfides, which form about two percent of the ore. The sulfides are mainly pyrite. Gold accompanies the pyrite, occurring both free and enclosed in the pyrite. No secondary enrichment of the orebodies is present. A more extended account of the geological features of the region is given in *Arctic Bibliography*, No. 16625.

Contains information on the important ranges of the area (Kenai Peninsula, Susitna valley, Copper River, Alaska Peninsula, and Yakutat); food and forage; range requirements and utilization; effects of fires and settlement; population dynamics; kill records, mortality, predation; long-term policies and management. Discussion of paper, p. 561-62.

Copy seen: DLC.

37553. SPENCER, ROBERT FRANCIS, 1917-, and W. K. CARTER. The blind man and the loon: Barrow Eskimo

variants. (Journal of American folklore, Jan.-Mar. 1954. v. 67, no. 263, pt. 1, p. 65-72) 17 refs.

Contains texts, analysis and comments with comparative notes on a tale widely diffused among the arctic and subarctic natives of North America, among the Eskimos particularly. Five variants of the tale were collected in the Barrow-Wainwright area of northern Alaska in the summer of 1952.

Copy seen: DLC.

37554. SPENCER, ROBERT FRANCIS, 1917- . The hunted and the hunters. (Pacific discovery, May-June 1953. v. 6, no. 3, p. 22-27, 6 illus.)

Contains discussion of the adaptation of the Barrow, Alaska, Eskimo to the impact of white settlement and culture, and his retention of the important elements of his former way of life. The modern aspects of the community of Barrow are pointed out. A walrus hunt in which the writer participated, is described to exemplify the Eskimo's adoption of some new methods and retention of older ones.

37555. SPIEGEL, ERNEST A., 1895- . Depressor effects of cold upon static receptors of the labyrinth. (American journal of physiology, 1944. v. 141, p. 404-409, illus.) 29 refs.

Contains an account of experiments with cats and rabbits having cold applied bilaterally to the external auditory meatus or to the tympanic cavities. A depressor effect upon tonic labyrinthine reactions (decrease of the extensor tonus on the side of cooling, inclination of the head towards this side) was observed. The possible role of physical factors responsible for this phenomenon, is discussed.

37556. SPIER, LESLIE, 1893- . Franz Boas and some of his views. (Inter-American Society of Anthropology and Geography. Acta Americana, 1943. v. 1, p. 108-127)

Contains a biographical sketch, evaluation of Boas' anthropological work, especially in the United States (teaching, field work among Eskimos and Indians). His theories and a selected bibliography (38 items) are given. *Copy seen:* DSI.

37557. SPINDLER, W. H. Labrador iron ore. (Military engineer, May-June 1954. v. 46, no. 311, p. 186-88, illus., text map)

Contains a brief review of the problems of developing the Knob Lake-Burnt Creek iron deposits. Construction of the Quebec North Shore and Labrador Railway is described in some detail. Work should be completed in summer 1954. Electric power, mining (open-pit method), shipping, and the terminal at Seven Islands, Que., are also briefly discussed. The 400,000,000 tons of proved ore average 55-56 percent iron.

37558. SPINNANGR, GUNNAR. Fog and fog forecasting in northern Norway (Norway. Meteorologiske institutt. Meteorologiske annaler, 1950. Bind 4, nr. 4, p. 75-136, 16 text maps 8 graphs 8 tables) 10 refs.

Norway north of 65° N. is to a great extent sheltered from fog by the Gull Stream, so that its frequency is no greater than in the southwestern part of the country. Five types are recognized: maritime air fog, continental air fog, radiation fog, frontal fog, and arctic sea smoke. Fog frequencies in the outer or coastal, fjord, and inland districts are discussed on the basis of observations from 55 weather stations. Continental air fog was predominant in the coastal district, with considerable frequency of maritime fog; maximum frequency was in summer; the fjord district had less than the coast. Two maxima were observed, one in summer due to continental fog, and one in winter as the result of arctic sea smoke. Few records were available for the inland district, but southern Finnmark showed a predominance of radiation fogs with great winter maximum. Sea surface temperatures in the Greenland Sea and Svalbard waters and their importance to fog forecasting are discussed, and fog frequencies at Jan Mayen, Bjørnøya, and Vestspitsbergen are briefly noted. The five types of fog in the three districts during various months and factors favorable to fog formation and dissipation are then described in detail, with references to actual weather situations occurring during 1935-1939.

37559. SPIRIDONOV, NIKOLAI I. Kul'turno-sofial'naii rabota v Chukotskom krae. (Leningrad. Arkticheskii...

institut. Bülleten', 1932. god 2, no. 3, p. 50-51) Text in Russian. **Title tr.:** Cultural and social work in the Chukotsk region.

Contains a review of activity in regard to schools, medical and propaganda centers in the Chukotsk-Anadyr region before and in 1932. Nine schools for the settled population and eleven for nomads, several "red tents" and "native club houses," eight small hospitals and medical centers were founded or planned. Only 12 percent of the children of school age among the settled population, including Chukchis and Eskimos, attended the schools in 1931, and none of the nomads. Teaching in the native languages was about to start.

37560. SPIRIN, IVAN TIMOFEEVICH. Na severnyĭ polūs. Moskva-Leningrad. Gos. izd-vo detokol lit-ry, 1952. 222 p. illus., maps. Text in Russian. **Title tr.:** To the North Pole.

Popularized version of author's previous publications (cf. *Arctic Bibliography*, No. 26387 and 32216) giving account of the flights in spring 1937 from Moskva via Arkhangel'sk, Nar'yan-Mar, Matochkin Shar, to Rudolf'a Island, thence to the North Pole, setting up the drifting station "North Pole" under Papanin's leadership. Description is given (p. 30-37) of airplane N-170 and instruments; the principal participants in these flights (Vodop'ianov, Babushkin, Molokov, Alekseev, Kozlov, Golovin) are characterized, and significance of the expedition stressed. Photographs and sketches (mostly new) show places visited, polar stations, land- and ice-scapes of Rudolf'a Island and Arctic Basin.

37562. SPRUNG, MAKSO. Osvrt na patofiziologiju duboke hipotermije. (Medicinski glasnik, Sept. 1953. god 7, br. 9, p. 319-21) 11 refs. Text in Serbo-Croatian. **Title tr.:** Considerations on the pathophysiology of deep hypothermia.

Deals with surface and core temperature; physiology of general hypothermia; pathology and causes of death; etc.

Copy seen: DSG.

37563. SPURR, G. B., and others. Prolonged hypothermia in the dog. (American journal of physiology, Aug. 1954. v. 178, no. 2, p. 275-82, 3 fig. 4 tables) 23 refs. Other authors: B. K. Hutt and S. M. Horvath.

Contains account of stable, low body temperature produced in dogs for periods of one to 34 hrs. (average 10.35 hrs.) by a special method described. Gradients between rectal, skin and environmental temperatures; causes of death, etc., are discussed.

Copy seen: DSG.

37564. SPURR, G. B., and others. Responses of dogs to hypothermia. (American journal of physiology, Oct. 1954. v. 179, no. 1, p. 139-45, 3 fig. 2 tables) 21 refs. Other authors: B. K. Hutt and S. M. Horvath.

Contains a study and analysis of physiological responses of animals during prolonged periods of stable, reduced body temperatures. Twenty-four experiments were performed on dogs under pentobarbital anesthesia, with measurements made of skin and rectal temperatures, O_2 consumption, pulmonary ventilation, cardiac and respiratory rate, metabolic changes, etc.

Copy seen: DSG.

37565. SPURR, G. B., and others. Thermal relationships in hypothermic dogs. (Federation proceedings, Mar. 1954. v. 13, no. 1, pt. 1, p. 144, table) Other authors: B. K. Hutt and S. M. Horvath.

Contains brief account of complete heat balance studies on hypothermic dogs. The maintenance of these animals at a thermally equilibrated state was difficult as the thermo-regulatory mechanism appeared to be sluggish and somewhat unstable in initiating compensatory responses at low body temperatures.

La splenoreduzione da fredda, con riferimento alla dottrina della splenoreduzione et alla genesi delle splenomegalie congestizie di tipo Bantiano. (Archivio di patologia e clinica medica, 1948. v. 26, p. 114-38, tables) 44 refs. Text in Italian. *Title tr.:* Studies of spleen reduction I. Spleen reduction due to cold, with reference to the theory of spleen reduction and to the genesis of congestive splenomegalies of the Banti type.

Following an introduction to the problem and to earlier studies, experiments in cooling the splenic and other surface areas in ten normal subjects, are described. Size of spleen, with amount of reduction (or enlargement) as well as the blood picture are studied. Spleen size-reduction observed upon cooling certain skin areas is found to be a reflexive, vasomotor phenomenon depending on intrasplenic arteriolar vasoconstriction. The bearing

of these experiments on certain pathologic conditions is discussed.

The balances of angular momentum, energy and water are examined on the basis of hemispherically distributed observations of wind, temperature and moisture for the year 1950. Mean latitudes of the strings of observation stations used for the study of all three balances are 13° N., 31° N., 42.5° N. and 70° N. Tabulations include numerical analysis of sensible heat flux data, water balance data, and momentum

balance data for 1950 at latitudes 55° N. and 70° N. **Copy seen:** DLC.

37583. STARTSEV, GEORGIĬ A. *Revolutsiia i Zyrĭane.* (In: Bogoraz, V. G., editor, *Revolutsiia v derevne, Moskva-Leningrad, "Krasnaia Nov",* 1924, p. 105-119) Text in Russian. **Title tr.:** Revolution and the Zyryans.

Contains a sketch of social and economic differentiation in the Zyryan country before 1917. The revolutionary movement, expropriation of the middle class and merchants, etc. are outlined. The subsequent great famine of 1918-1919, substitutions in food and unsuccessful efforts to save life are described. Notes on superstitions and ancient beliefs are included. **Copy seen:** DLC.

37584. STAUBER, HANS. *Die Bedeutung der hydrogeologischen Forschung zur Besiedlung und Erschliessung der Tundragebiete.* (Polarforschung, 1952, pub. 1954. Bd. 3, Heft 1-2, Jahrg. 22, p. 172-80, diagr.) Text in German. **Title tr.:** The importance of hydrogeological investigations for the settlement and reclamation of tundra regions.

"The possibilities of reclaiming polar regions for agricultural and settlement purposes are discussed with special emphasis on the water economy of these regions. Eight million sq. km. of the total 28 million sq. km. of the polar regions are ice-free. A typical mountain region in Greenland [during summer] is described, mapped and diagrammed, and suggestions on drainage, water supply, flood control, [solifluction] and avalanche and landslide prevention are given . . ."—SIPRE. Water problems and tasks peculiar to Greenland are summarized and practical solutions are advanced. A three-stage reclamation program is described consisting of (1) ground improvement through drainage and control of ground water; (2) consequent improvement of the soil, vegetation and local climatic conditions; and (3) artificial help through sowing, planting, soil working and fertilizing. The use of good aerial photographs in terrain and survey studies is stressed.

37585. STEERE, WILLIAM CAMPBELL, 1907- . The systematic position of *Bryobrittonia*. (American journal of botany, May 1953. v. 40, no. 5, p. 354-58, illus., text map) 10 refs.

"*Bryobrittonia*, a genus of Musci, was established in 1901 for a single collection, lacking sporophytes, from the Yukon Territory [Dawson]. Although recognized as a valid genus by bryologists, its relationships have been impossible to determine with certainty, in spite of several suggestions. The author reports his discovery of sporophytes of *Bryobrittonia* in arctic Alaska, [Franklin Mts. between Schrader and Peters Lakes, northeastern Alaska], and describes in detail the reproductive structures, which demonstrate conclusively that this genus belongs in the Encalyptaceae, hitherto represented by a single genus, *Encalypta*. From numerous unreported collections, the known geographical distribution of *Bryobrittonia* is extended to Coppermine and Prince Patrick Island . . . and to several localities on the slopes of the Brooks Range in Alaska."—*Author's summary.* **Copy seen:** CaMAI; DSL.

37589. STEIGER, ANDREW J. Art in the Soviet Arctic. (International literature, 1938, no. 1, p. 93-98, illus.)

Notes by an American journalist largely from interviews with officials during a visit to the U.S.S.R. He describes a special Traveling Arctic Theater organized in 1935 and sponsored by the Northern Sea Route Administration, which made three tours during 1935-37, visiting all the principal settlements in the North from Kola Peninsula to Chukotka. It spent 15 months on the road and traveled a total of 52,000 km. The founding of a permanent theater at Igarka in 1937 is noted; also tours of concert brigades from the Moscow Conservatory. The significance of art in the northern areas as an instrument of acculturation and of political

and social propaganda is discussed generally and the Soviet attitude toward the native northern peoples praised. A poem on Lenin and Stalin called *The Sun Regained*, written down "from the words of native bards on the Kola Peninsula" is summarized and partly translated. **Copy seen:** DLC.

37590. STEIN, ROBERT, 1857-1917. Geographische Nomenklatur bei den Eskimos des Smith-Sundes. (Petermanns geographische Mitteilungen, 1902. Bd. 48, p. 195-201, fold. map on plate 18) Text in German. **Title tr.:** Geographic names among the Eskimos of Smith Sound.

Contains an account of migration and travel among the Polar Eskimos, and their good orientation in geographic matters. Native place naming is discussed: its linguistic aspects, formation of terms, their meaning; misspelling and mispronunciation of Eskimo terms by Europeans, etc. Native names are attached to features on a map (1:1,200,000) of northwest Greenland from Cape York to Inglefield Land, and about a hundred terms with their variants, and with German equivalent, listed in the text. The material was collected during author's two-year sojourn (1900-1901) in that region with the Peary Expedition. **Copy seen:** DLC.

37591. STEINITZ, WOLFGANG, 1905-. Geschichte des ostjakischen Vokalismus. Berlin, Akademie-Verlag, 1950. viii, 138 p. sketch map. Text in German. **Title tr.:** History of the Ostyak vocalism.

A linguistic study, based on material collected by K. F. Karjalainen, H. Paasonen, and the writer. Ostyak dialects (indicated on map, p. 10) are reviewed. The vocalism of the first syllable in the present-day dialects, and the history of each vowel (16 in all) are given. The Ostyak language has the key position for study of Finno-Ugric vocalism, states the author.

37592. STEINITZ, WOLFGANG, 1905-. Ostjakische Grammatik und Chrestomatie; Wörterverzeichnis. 2 verb. Auflage. Leipzig, O. Harrasowitz, 1950. 169 p. 168 refs. Text in German. **Title**

tr.: Ostyak grammar and chrestomathy: with a vocabulary. 2d improved edition.

A revision and enlargement of the author's *Ostjakische Chrestomatie*, 1942 (*Arctic Bibliography*, No. 26420). In the introduction (p. 7-35) some general information is given on this people (23,000 in 1939), their living places and occupation, the dialects are characterized and Ostyak linguistics and literature reviewed. An extensive bibliography is added. The main part of the book gives Ostyak grammar (p. 36-80). Texts in the Latin alphabet and without translation present samples of folklore (12 tales and narratives, 27 riddles, and three songs), all but one tale in Sherkaly dialect, noted down by the writer and here published for the first time. As samplings of the modern Ostyak literary language, translations are given of Pushkin and other Russian authors in the new Cyrillic transcription. A vocabulary is appended (p. 134-69).

37594. STEJNEGER, LEONHARD HESS, 1851-1943. Georg Wilhelm Steller, the pioneer of Alaskan natural history. Cambridge, Harvard University Press, 1936. xxiv, 623 p. ports., facsim., plates (1 col.) maps (1 fold.). Over 250 refs.

Biography of the German-Russian scientist (1709-1746) by an American biologist, who 150 years later became noted, like Steller, for his natural history investigations of the Commander Islands. Steller's early life and education in Germany, his move to Russia in 1734, and appointment as "adjunct" to the recently formed (1725) Academy of Sciences are recounted in some detail.

The organization of Bering's second expedition, its Admiralty and Academy components, its program of exploration,

and the principal members are sketched. Steller joined it in 1738, his travels to Yakutsk, Okhotsk and Kamchatka, living, travel and working conditions, logistic problems, are described. Relations (mainly acrimonious) among members of the expedition, denunciations, etc., to the government and Academy at home are stressed as frustrating accomplishment and eventually leading indirectly to Steller's premature death. Krashennikov's expedition in Kamchatka at this time is also noted. Steller joined Bering's voyage to America in May 1741: its course, particularly the discovery of Alaska (Mt. St. Elias, July 16, 1741), the disastrous wintering on Bering Island, Steller's observations of plants and animals, especially the sea-cow, are treated fully (p. 220-375). The latter stages of the Bering Expedition, Steller's recall, death, the fate of his mss. are outlined.

In *appendices* Stejneger traces the origin of the pictures of the sea cow (as Steller did not draw), and evaluates his contribution as ichthyologist and as botanist. The work is based on exhaustive study of German and Russian sources in mss. and print., as well as on Stejneger's familiarity with the Bering Sea region. It is fully documented (over 250 references, p. 565-99), includes record of Steller's (17) works, and has extensive index of names and subjects.

37596. STEJNEGER, LEONHARD HESS, 1851-1943. Remarks on the species of the genus *Cephus*. (U. S. National Museum. Proceedings, Aug. 5, 1884. v. 7, no. 14-15, p. 210-29, illus.)

Contains a discussion of the genus *Cephus* (so-called black guillemots), four tables of measurements of various species, notes on geographic distribution

and a synopsis of five. *Cephus mandtii* is circumpolar in distribution; *C. grylle* is known to breed in Greenland; *C. (Uria) columba* is found on the Asiatic shores of the Pacific Ocean; and *C. carbo* seems to be confined to the shores of the Sea of Okhotsk and adjacent waters. **Copy seen:** DLC; MH-Z.

37599. STELLER, GEORG WILHELM, 1709-1746. G. W. Steller's . . . Reise von Kamtschatka nach Amerika mit dem Commandeur-Capitän Bering; ein Pendant zu dessen Beschreibung von Kamtschatka. St. Petersburg, Johann

Zacharias Logan, 1793. 133 p. Text in German. **Title tr.:** G. W. Steller's voyage from Kamchatka to America with Commander-Captain Bering; an appendix to his description of Kamchatka

This is a reissue in book form of Steller's journal edited by P. S. Pallas and first published (posthumously) in Pallas' *Neue nordische Beyträge* . . . Bd. 5-6 (with minor discrepancies noted by Golder). An English translation of the journal is pub. in *Bering's voyages*, 1925 (v. 2, p. 9-187) edited by F. A. Golder, q. v.

The introduction (p. 5-14) outlines the tasks, plans and preparation of this part of the so-called Great Northern Expedition. Then follows the journal of the German-Russian naturalist, Steller, who in 1738 joined the second Kamchatka expedition and accompanied V. Bering on his voyage on the *Sv. Petr* from Kamchatka to Alaska in 1741. The events of the voyage are recounted from its start, June 4, the disappearance of the companion ship *Sv. Pavel* under command of Chirikov, the trip eastward, the discovery of the Alaskan coast and the author's landing and scientific observations on Kayak Island on July 20 (p. 29-43); the voyage back, outbreak of scurvy, encounter with a "sea-monkey" probably a fur seal (p. 47-49), discovery and landing on the Shumagin Islands, the first meeting with natives of northwestern America, Aleuts (p. 63-72). The storms encountered in September and October, are described, then the landing on a coast thought to be Cape Kronotsky, actually one of the Commanders now known as Bering Island, and wreck of *Sv. Petr*. The hardships and adventures of wintering there, observation of the wildlife, hunting, the death of Bering and thirty others are related. Finally Steller tells of the building of a new ship in the spring and summer of 1742, sailing to Kamchatka under the command of Waxell and the arrival at Petropavlosk on Aug. 26. The diary vividly depicts Bering, Waxell, Khitrov and other members of expedition. The narrative is colored by the author's attitude as a naturalist, eager to go further and to stay longer on the newly discovered lands, and in conflict with Bering and his aides, apprehensive of danger in unknown regions, aware of the advanced season and poor equipment of the expedition. The editor's

preface, signed "P", gives information about origin of the manuscript.

37600. STELLER, GEORG WILHELM, 1709-1746. Georg Wilhelm Steller's . . . Beschreibung von dem Lande Kamtschatka, dessen Einwohnern, deren Sitten, Nahmen, Lebensart und verschiedenen Gewohnheiten. Herausgegeben von J. B. S. mit vielen Kupfern. Frankfurt und Leipzig, J. G. Fleischer, 1774. 4 p. l., 24, 4, 384, 72 p. illus., fold. plates, fold. maps. Text in German. **Title tr.:** Georg Wilhelm Steller's description of the land of Kamchatka, its inhabitants, their manners, names, way of life and various customs, edited by J. B. S. [Jean Benoît Scherer], with numerous plates.

Comprehensive account, one of the two earliest, this by the naturalist who went to Kamchatka in 1738 to participate in Bering's expedition and remained almost till his death in 1746. Brief survey is given of the inhabitants, Kamchadals, Koryaks and Chukchis (p. 1-12); and the Kamchadals (Itelmen) are treated in detail (p. 239-362): their origin, religion and shamanism, psychological characteristics, virtues and vices, physical characteristics, clothing, artifacts and implements, food, drink, cooking, and manner of eating, festivals and entertainments, marriage, childbirth and education, social organization, law and settlement of controversies, calendar and medicine.

Geography, fauna and flora are described (p. 13-199): the coasts and islands, rivers, lakes, springs (cold and hot), mountains and volcanoes, soil, climate, minerals, vegetation, algae, sea mammals, animals, fishes, birds, insects. Russian posts *ostrogi* are noted (p. 200-220); and the means of transportation and trade discussed (p. 367-84).

Steller's work is preceded by the editor's preface, in which Krasheninnikov's description of Kamchatka is termed (unjustly) but an imperfect copy of Steller's; and biography of Steller (24 p.) which is not always reliable, e. g. on the circumstances of his death.

Appended is an essay (in German): Geography and constitution of Kamchatka (71 p.) by Gerhard Friedrich Müller, which is listed in this Bibliography under its author's name.

37603. STEPHEN, W. P. A revision of the bee genus *Colletes* in America north of Mexico (Hymenoptera, Colletidae). (Kansas University science bulletin, 1954. v. 36, pt. 1, no. 6, p. 149-527, illus. (87 figs.), 8 text maps) 44 refs.

Contains data on the morphology, bio-nomics, distribution, phylogeny, geographic variation, and measurements, followed by a description of this genus,

and keys to the males, and females (p. 173-201). Ninety-five species (12 new), and 16 subspecies (males and females), are described, with extensive taxonomic, data, literature references, synonyms also some information on biology (flight records, plant records), phylogeny and on the geographic distribution in America north of Mexico. Index to species and subspecies is appended. A few species native to Alaska, Yukon Territory and Northwest Territories, are included.

37604. STEPHENS, FRED H. Canada's largest dredging operation. (Western miner, Jan. 1953. v. 26, no. 1, p. 40-42, 3 illus.)

Yukon Consolidated Gold Corporation, Ltd., incorporated Apr. 14, 1923, was long the only major dredging operator in Canada; its seven dredges still outnumber the total of all others. Its organization, financial condition, and history are briefly sketched, location of dredges, problems of transporting equipment and supplies, number and distribution of working force are noted, company officials listed.

Copy seen: DGS.

37605. STEPHENS, FRED H. A gold camp of substance. (Western miner, Jan. 1954. v. 27, no. 1, p. 33-37, 9 illus.)

Mining developments and difficulties confronting companies in the Yellowknife region, Great Slave Lake, since 1944 are outlined. Construction of a railroad from Grimshaw, Alberta, to the new Pine Point lead-zinc mining district on the south shore of the lake would benefit all mining in the Yellowstone region. The program, production, and staff of three producing gold mines, Giant Yellowknife, Con Mine, and Consolidated Discovery, are described, as of Sept. 1953.

37608. STEVENS, W. E. The northwestern muskrat of the Mackenzie delta, Northwest Territories, 1947-48. Ottawa, Oct. 1953. 46 p. 10 illus., text map. 4 tables. Mimeographed. (Canada. Wildlife Service. Wildlife management bulletin, series 1, no. 8)

Contains results of continuous investigations during June 7, 1947-Sept. 6, 1948, of the mammalian fauna of the region 67°48' - 69° N. 134°10' - 135° W. Concerned chiefly with the muskrat, *Ondatra zibethica spatulata* Osgoode, basis of the fur trade economy in this region, the studies were carried on in five widely separated areas representing various types of habitat, one north of the region of forest cover. Factors considered are: distribution of this species in northern Canada, tagging and trapping procedures, size and weight, sex ratios, reproduction, population studies, winter studies, types of lake habitats, harvesting methods, and decimating factors. Brief notes on beaver are included, and need for a program of habitat improvement for both muskrat and beaver is discussed.

37609. STEVENSON, EDWIN R. Rotors over Alaska. (American helicopter, Oct. 1946. v. 4, no. 11, p. 18-19, 46, illus.)

Operations with a YR-5A helicopter in the Fairbanks area are described. Cold-weather tests were conducted at temperatures to -20° F. Wheel landings were made on frozen creeks or rivers covered with an average snow depth of 24 inches. When landing on snow-covered swamps and in small open areas in the woodland, it was advantageous to select an area where some brush broke through the snow or where snow hummocks prevailed in order to aid the pilot's depth perception. The commercial need for helicopters in Alaska is expressed.

37611. STEVENSON, WILLIAM A. Bridge for defence of the western world. (Jet age, Summer 1954. v. 3, no. 2, p. 1, 7, 10-12, illus. incl. map)

Contains description of aerial convoy operations conducted by the Royal Canadian Air Force from Montreal to France or Germany via Goose Bay, Bluie West, Keflavik, and Kinloss (Scotland), transporting Canadair's Sabre 5 sweptwing jet fighters powered by Avro Canada Orenda engines. Total air time for the 3,100-mile journey is 6.5 hrs. Experiences encountered by various pilots are described to indicate the dangers of the northern route, including landing difficulties at Bluie West One. Emergency procedures and rescue services available are discussed.

37613. STEWART, BENJAMIN DUANE, 1878- . The occurrence of gypsum at Iyoukeen Cove, Chichagof Island, Alaska. (In: U. S. Geological Survey. Mineral resources of Alaska in 1929. Bulletin, 1932, no. 824, p. 173-77)

Describes the location, extent, and former operations at the old worked-out gypsum deposit on Gypsum Creek on Chichagof Island in Southeast Alaska, and the discovery in tunnels of a new gypsum deposit on the shore of Iyoukeen Cove, one-and-a-half miles east of the old Gypsum Creek mine. The location and general geology of the new deposit are described, and the results of exploratory work in driving three tunnels are given. Two of the tunnels penetrated the upper portion of a body of gypsum of undetermined extent. The article suggests that a small amount of additional work would serve to demonstrate the continuity and extent of the deposit.

Copy seen: DLC.

37614. STEWART, N. C. British Columbia provincial boundaries. (Canadian surveyor, Apr. 1954. v. 12, no. 2, p. 75-96, 3 illus., text map, tables) 34 refs.

Includes discussion of demarcation of the boundary between British Columbia and Yukon and Northwest Territories (p. 76-86). The present boundaries of British Columbia came into being in 1866. Influx of people into the Yukon Territory, created in 1898 during the gold rush, necessitated more definite demarcation of the Yukon-B. C. boundary. Surveys made between 1899 and

1945 are briefly described. In 1945 a commission was created to survey the boundary using astronomic control. The surveyors' instructions are given, and the survey itself described, with brief discussion of physical features of the boundary region and means of access. Chronological record of boundary surveyors and assistants is included.

37615. STEWART, THOMAS DALE, 1901- . Change in physical type of the Eskimos of Labrador since the 18th century. (American journal of physical anthropology, 1938. v. 23, no. 4, p. 493-94)

Contains an abstract of a lecture given at the 9th annual meeting of American Association of Physical Anthropologists in 1938. Measurements of skeletal remains from graves dated first half of the 19th century, and on living individuals, show that a marked change has taken place. Among the living Eskimos, stature seems to decrease, head shape changes from dolichocephaly to mesocephaly, face breadth decreases relative to the length, dental caries is rampant, syphilis is represented, and admixture of White blood is increased. These changes of a degenerative nature are due to the influence of civilization, primarily to altered food habits.

37620. STIER, THEODORE JAMES BLANCHARD, 1903- . On the temperature-regulatory function of "spontaneous" activity in the mouse. (National Academy of Sciences, Washington. Proceedings, July 1933. v. 19, no. 7, p. 725-29, fig.) 7 refs.

"Spontaneous" muscular activity of two-day-old mice increases as the animal's internal temperature rises from 16° to 22° C. and then decreases at successively higher temperatures. A kind of temperature regulation is assumed to exist in the young mouse at internal temperatures above 25° C.: a fall in ambient temperature results in increase

of muscular activity and of heat production.

37621. STIER, THEODORE JAMES BLANCHARD, 1903-, and **G. G. PINCUS.** Temperature characteristics for frequency of respiratory movements in young mammals. (Journal of general physiology, Mar. 20, 1928. v. 11, no. 4, p. 349-56, 3 fig.) 12 refs.

Contains a study of respiratory movements of mice one to two days old, in various environmental temperatures. Internal temperature of two-day old mice deviated by 0.01° to 3.0° C. from ambient temperature over a range of 24° C. Respiratory frequency did not show a regular dependence on environmental temperature.

Contains an account of tests on infants made within 24 hrs. after birth. "The response to cold was withdrawal, with a less pronounced reaction of approach to warm (greater in the waking than in the sleeping state). The cheek was most sensitive while the sole of the foot was more sensitive than the palm of the hand. Radiating warmth on the cheek was more effective than the warmth contact in eliciting the rather complex searching reflex."—*Psychological abstracts*, 1945. v. 19, p. 148.

37627. STØRMER, CARL, 1874- . Preliminary report on the results of the aurora-borealis expedition to Bossekop

in the spring of 1913. Fifth communication. (Terrestrial magnetism and atmospheric electricity, Dec. 1916. v. 21, no. 4, p. 153-56, 2 plates, text map, graphs) ref.

The material considered is from the nights of Mar. 30 and Apr. 1, 1913. Auroras seen are described and pairs of photographs taken simultaneously from Bossekop and Store Korsnes are shown, with notation on auroral altitudes and positions. **Copy seen:** DLC.

37628. STØRMER, CARL, 1874- Preliminary report on the results of the aurora-polaris expedition to Bossekop in the spring of 1913. (Terrestrial magnetism and atmospheric electricity. Mar. 1915. v. 21, no. 1, p. 1-12, 5 text maps, diagrs.) 4 refs.

The second in a series of reports by Størmer on the auroral expedition to Bossekop, northern Norway. The material considered is from the nights of Mar. 3-4, 4-5, 11-12, 1913. Each aurora was photographed simultaneously from Bossekop and Store Korsnes, 27.5 km. apart in a north-south line. Altitudes and positions from some of the pairs of photographs published in earlier reports of the expedition are given. The auroras seen on the above dates are described and some conclusions drawn as to their origin. **Copy seen:** DLC.

37629. STØRMER, CARL, 1874- Summary of results of the aurora-borealis expedition of 1913 to Bossekop, Norway. (Terrestrial magnetism and atmospheric electricity, Dec. 1916. v. 21, no. 4, p. 157-86, 2 text maps, graphs, 9 tables) 6 refs.

The altitude and situation of the auroras observed are discussed and shown graphically. The auroras are classified into eight types according to color, form, and time of exposure. Each of these types is briefly described, the dates they were seen, and photographs of them published in the preliminary series of reports listed above, are noted. **Copy seen:** DLC.

37634. STOLL, WALTER CLERICUS, 1915- . Relations of structure to mineral deposition at the Independence Mine, Alaska. Washington, D. C., U. S. Govt. Print. Off., 1944. ii, 201-217 p., 3 diagrs., 2 photos., 4 maps incl. 3 fold. (U. S. Geological Survey. Bulletin 933-C. Mineral resources of Alaska, 1940)

Presents results of a study by the author in 1940 of the Independence gold mine in the Willow Creek gold mining district of the Talkeetna Mts. in south-central Alaska. Describes the geologic setting and the Independence gold quartz vein. Discusses the influence of structure on the distribution of the ore and the internal structure of the vein. Conclusions summarize the sequence of events which produced the Independence vein. Deposition from gold- and sulfide-bearing solutions followed the fracturing of quartz filling deposited from hydrothermal solutions in the vein fault.

(Deutsches Gewässerkundliches Jahrbuch. Besondere Mitteilungen, Nr. 10) 66 refs. Text in German. *Title tr.:* The formation, prevention, and removal of ice in standing and flowing waters and especially on dams.

Processes during ice formation in standing and flowing water and various theories of anchor- and frazil-ice formation are discussed. Ice movement including drift ice and debacle at various stages of the icing period is described. The effect of ice on dams, preventive measures against ice in power plant installations, dam and installation design to minimize the ice damages, and various measures taken to combat ice in intakes, rakes, gates and turbines are described in detail. The use of icebreakers (vessels) and uniform methods of combatting ice during the

thaw period are discussed. Appended is an analysis of the possibility of determining amounts of ice passing a given river cross-section, the pressure effects of ice floes and ice sheets, and ice creep.

37661. STURGIS, SAMUEL DAVIS, 1897- . World's third tallest structure erected in Greenland; radio transmission tower rises 1,212 ft. at Thule Air Force Base. (Civil engineering, June 1954. v. 24, no. 6, p. 59-63, illus., 3 fig.)

Contains detailed description of the structural features and erection operations of a radio transmission tower rising 1,212 ft. 8 in. at Thule Air Force Base, Greenland. The tower stands on two

tiers of base insulators and was constructed under the supervision of the U. S. Corps of Engineers for the U. S. Air Force. Work on the tower base and anchor blocks was begun in April 1952, and the actual job of erection was completed before the end of the summer. Typical tower section is an equilateral triangle 15 ft. on a side. The tower is held by 18 guy wires under predetermined tension. Foundations were designed to overcome existing permafrost conditions by excavating during the winter to a depth of six ft. below the proposed bottom elevation of the concrete blocks. The pit was then back-filled with non-frost-susceptible sand and gravel and allowed to come to the temperature of the surrounding soil.

37662. SULLIVAN, CHARLOTTE M., and K. C. FISHER. The effects of light on temperature selection in speckled trout *Salvelinus fontinalis* (Mitchill). (Biological bulletin, Oct. 1954. v. 107, no. 2, p. 278-88, 4 fig., 2 tables) 20 refs.

Selection of temperature was apparently more precise in low light, however actual temperature selected did not vary with the light intensity. With partly illuminated environment the response to high light prevailed over temperature response; at intermediate and low light intensities temperature response prevailed.

Contains a grammatical sketch of a Nana  or Goldi dialect, spoken in the Khabarovsk region, on the Kur River (left tributary of the Tunguska which empties into the Amur near Khabarovsk). The writer visited three Nana  villages in the Kur-Urmaiysk region in 1939. The dialect of Kur is very close to the Tungusian. The Nana  or Goldi language has three chief dialects: the Nana  proper with its three sub-dialects (including that of Kur-Urmaiysk), the Ul'chi, and the Oroki.

Contains the results of a study of *Plectrophenax nivalis*, carried out at the head of Frobisher Bay, June 14-Aug. 22, 1953. Twenty-two nests are described and measured (table 1); as are five adult birds, snow bunting and eggs; nesting habits and enemies are noted.

Copy seen: DSI; MH-Z.

37667. SUTTON, GEORGE MIKSCH, 1898-, and **D. F. PARMELEE.** Survival problems of the water-pipit in Baffin Island. (Arctic, Sept. 1954. v. 7, no. 2, p. 81-92, 3 illus., 2 tables) 15 refs.

Contains results of observations and collections made by the writers June 14-Aug. 22, 1953, near the Royal Canadian Air Force station at the head of Frobisher Bay. Nesting and feeding behavior is described. Incubation period was found to be about 12 days, fledgling period 12-14 days. Description and data on hatching success of 14 nests are given. The pipit was least successful in nesting of all birds of the Frobisher region in summer 1953. Principal losses, of well-developed nestlings, occurred during the third week of July when bad weather created an insect shortage. Four adult specimens collected are described.

37672. SVERDRUP, HARALD ULRIK 1888-. Arctic sea ice. (Encyclopedia Arctica [unpub.] v. 7, Meteorology and oceanography, July 1951. pt. 7) 7 refs.

"Sea ice is formed by the freezing of sea water. The density of sea water at salinity greater than 2.47 percent increases until the f. p. is reached and the whole body of water must be cooled to the f. p. before ice can form on the surface. Sea water freezes to pure ice containing small cavities filled by brine. The salt in the brine crystallizes out at -23°C . The temperature of ice in contact with sea water equals the f. p. corresponding to the salinity of the water. The underside of an ice floe remains at constant temperature during the whole year, while the temperature of the surface varies. The salinity of the ice varies from 0-1.5 percent and depends mainly upon rapidity of freezing and temperature changes after freezing. Trapped brine moves slowly down and produces a freshening of the top layers which produce potable water upon melting, the upper 50 cm. of ice having a temperature of 0°C . in Aug. Winter ice freezes to a thickness of 150-250 cm. and melts by absorption of radiation in spring which reduces its thickness by an average of 100 cm. each summer. The physical properties of sea ice depend upon its salt content and the amount of air bubbles in the ice. The transformations and seasonal changes of sea ice are discussed."—SIPRE.

37674. SVERDRUP, HARALD ULRIK, 1888- . Oceanography of the Arctic. (Encyclopedia Arctica [unpub.] v. 7, Meteorology and oceanography, July 1951. pt. 6) 15 refs.

"The limits, bathymetric features, bottom sediments, salinity, temperature, oxygen content, currents, formation of deep and bottom water, and the ice conditions of the Arctic [Basin and adjacent] seas are presented. Wind drift of the ice in the eastern Siberian Sea [and the effects of river discharge and excess of precipitation over evaporation on salinity are] discussed. The water on the shallow areas between Laptev Strait and Bear Island freezes to the bottom in winter; the ice floes rise when melting takes place in summer and carry with them mud, stones and shells."—SIPRE.

Copy seen: DWB.

37675. SVERDRUP, HARALD ULRIK, 1888- . Temperaturen i Vest-Spitsbergens breer. (Naturen, 1935. Årg. 59, p. 239-48, graphs) Text in Norwegian. **Title tr.:** The temperature in Vestspitsbergen's glaciers.

"The temperatures within glaciers were measured with thermoelements at Isachsen's Plateau. Temperatures decreased rapidly to a depth of 3 m. and increased slowly to 0° C. at 10 m. The temperature distribution was attributed to the latent heat released by the freezing of surface meltwater (145 mm./sq. cm.) which penetrated the ice. This process tends to increase the density of the firn with depth. The average density within the upper 40 cm. of firn was computed from 5-day distribution curves of temperatures. The computations, observations, and Ahlmann's findings are in good agreement. It is concluded that the glaciers of West Spitsbergen have the same temperature distribution as found on Isachsen's Plateau. [cf. *Arctic Bibliography*, No. 17310]"—SIPRE.

37676. SWADESH, MORRIS, 1909- . Time depths of American linguistic groupings. (American anthropologist, June 1954. v. 56, no. 3, p. 361-64)

A summary statement of the results of a new linguistic technique (glottochronology or lexicostatistics) for meas-

uring elapsed time. This method, developed by the author (see *Arctic Bibliography*, No. 26563) attempts to estimate the time depth, i. e. the time of separation of related languages by the percentage of agreement in selected words of their vocabularies. Time depths are calculated for Eskaleut (Eskimo and Aleut) and eight other native American linguistic stocks. Eskimo and Aleut estimated to have separated around 3,000 years ago, and Yukon and Greenland Eskimo 1,000 years ago. Tlingit, the only northern Indian group included in Swadesh's study, is thought to have separated from Hupa around 2,000 years ago. Swadesh's estimates for time depths of Eskimo and Aleut are discussed by H. B. Collins (q. v.) under "Comments" in same article. **Copy seen:** DSL.

37677. SWALES, BRADSHAW H. Ruby-throated hummingbird near St. Michael, Alaska. (Condor, May-June 1926. v. 28, no. 3, p. 128)

Contains a record of a mummified specimen of *Archilochus colubris* taken at Klukatauck, about 18 miles from St. Michael in 1925; deposited in the U. S. National Museum.

Copy seen: DSI; MH-Z.

37678. SWAN, HENRY, II, 1913- , and I. ZEAVIN. Cessation of circulation in general hypothermia, III. Techniques of intracardiac surgery under direct vision. (Annals of surgery, Apr. 1954. v. 139, no. 4, p. 385-96, 5 fig.) 55 refs.

A method for inducing hypothermia in patients is described, aimed at cessation of circulation for a period compatible with open-heart visual surgery. The technique of obtaining a temporary dry field within the heart is also outlined, dangers and pitfalls of hypothermia discussed and three specific operations described. The first part of this study is listed as *Arctic Bibliography*, No. 32338.

Contains a discussion of the status of *Sayornis sayus yukonensis* and its migration from breeding grounds in Alaska southwestward to California, Nevada and Arizona. The validity of the race *yukonensis* is recognized.

Copy seen: DSI; MH-Z.

37683. SWARTH, HARRY SCHELWALD, 1878-1935. Problems in the classification of northwestern horned owls. (Condor, Jan.-Feb. 1934. v. 36, no. 1, p. 38-40)

Contains a study of geographic races of the great horned owl (*Bubo virginianus*) partly based on color variants, *saturatus* and *subarcticus*, native to Alaska and Southeast Alaska.

Copy seen: DSI; MH-Z.

37684. SWARTH, HARRY SCHELWALD, 1878-1935. Report on a collection of birds and mammals from the Atlin region, northern British Columbia. (California. University. Publications in zoology, Sept. 24, 1926. v. 30, no. 4, p. 51-162, illus., plates 4-8) 48 refs.

The itinerary is given of the summer 1924 expedition sponsored by Miss Alexander for the Museum of Vertebrate Zoology of California University to the British Columbia-Yukon-Alaska border region; the localities and faunal zones are described. Following a check list of 121 birds observed, are detailed field notes on each species (p. 61-145). *Lagopus lagopus alascensis* n. ssp. (Kowak River delta, Alaska and Yukon Territories) is described (p. 87-94); several species are compared with specimens from Alaska and their distribution in Alaska and northern Canada are shown on text maps (p. 74, 97, 123, 125). Similarly, check list and field notes are given (p. 145-51) for 21 mammals, the northern coyote (*Canis lestes*) is described partly on the basis of specimens from Yukon Territory; also the beaver (*Castor canadensis canadensis*) observed in a pond in Yukon Territory.

37695. TÄNING, Å. VEDEL, 1890- . Fluctuations in fish populations owing to climatic changes. (*In:* United Nations Scientific Conference on the Conservation and Utilization of Resources, *Lake Success*, N. Y., 1949. Proceedings, v. 7, *Wildlife and fish resources*, pub. 1951. p. 8-10) 5 refs.

Contains discussion of the climatic amelioration since about 1920 and the rise in temperature in northern ocean waters. Changes in stocks and distribution of cod in Baffin Bay-Davis Strait, Greenland and Barents Seas, and Svalbard waters are noted and commercial fishery statistics are given. Climatic change has extended the cod waters much farther north than the rise in temperature has restricted inhabitable waters to the south. Of the cod populations, the Arcto-Norwegian stock has probably enlarged its distribution area the most.

Contains an analysis on the effects of warmer climate of the past quarter century, or so, upon fish life and fisheries of the northern Atlantic and arctic seas. The shift of cod (and cod fisheries) to West Greenland waters, to the Barents Sea and northern Baltic, with a corresponding decrease in southern areas; the appearance of warm-water animals in high latitudes; decrease in the number of vertebrae in herring; etc. are explained and discussed. Quarterly hydrographic-biologic investigations of key sections of the Atlantic are recommended for a better understanding of conditions and their exploitation. **Copy seen:** CaMAI.

37697. TABANELLI, M. Congelamenti di guerra. (Archivio italiano di chirurgia, 1946. v. 68, p. 111-51, illus. tables.) Text in Italian. **Title tr.:** Frostbite of war.

A study based on a great number of military cases of 1942-43, with a considerable amount of statistics as to body regions affected; duration of symptoms and of therapy, amputations, etc. The first three chapters deal with injuries of the first to third degree and their symptoms, treatment, etc.; the remainder, with operative treatment of frostbite, methods of disarticulation, amputation, etc.

Rats swam 500 times shorter in cold water (63° F.) than in water kept at or near body temperature. The animals had no previous swimming experience and "they were swum until dead." Records of body temperatures suggest that at water temperatures below (or above) that of the body, swimming time is limited by the rat's ability to maintain normal body temperature; in water of body temperature swimming time is determined by fatigue and starvation. *

(Teion kagaku [Low temperature science], Tokyo, 1948. v. 4, p. 105-116, 3 fig., 2 tables) 6 refs. Text in Japanese. Summary in English. **Title tr.:** Experimental studies on death from cold, especially on brain waves under alcoholic conditions.

"The relationship between body temperature and brain waves at -40° C. temperature were studied by injecting 6 cc of 25 percent alcohol/kg. into the veins of rabbits. The body temperatures fell with linear rate. The abdominal temperatures remained 3-4° C. below that of unanaesthetized controls. Brain temperatures differed only within 1° C., and brain waves were unchanged. Alcohol appeared to have delayed brain deterioration and the disappearance of the brain waves. It is concluded that the injection of alcohol prolongs the period of survival."—Authors' abstract.

Cats with lesions in the anterior hypothalamus showed normal or in some cases elevated temperatures, and a diminished capacity to prevent a rise of body temperature in a warm environment. "The ability to regulate against cold was not seriously impaired." **Copy seen:** DSG.

37728. TEAL, JOHN JEROME, Jr., 1921- . Europe's northernmost fron-

tier. (Foreign affairs, Jan. 1951. v. 29, no. 2, p. 263-75, text map)

The Svalbard archipelago became part of Norway on Aug. 14, 1925. By treaty, other nations have access to economic interests there and the area may not be fortified. The various islands, climate, and wildlife are briefly described. First visited by the Vikings, the islands were the scene of a great whaling industry in the 17th century, and were used by first Russian, then Norwegian hunters in the 18th and 19th centuries. In the 20th, coal and strategy have been the main factors in Svalbard development. By 1920 many nations had staked coal claims, but after 1925 mining was carried on by Norwegians alone, until the resumption of Russian mining during development of the Northern Sea Route. Norwegian and German activities on Svalbard during World War II are noted, and the notes exchanged after the war by Norwegian and Soviet governments regarding defense of the archipelago are discussed. Since 1947 the large number of Russian miners and amount of construction carried on has been out of all proportion to the small amount of coal produced. The strategic value of Svalbard to the Atlantic Pact nations (particularly to defence of northern Norway) and to the U.S.S.R., and the complications over its sovereignty, implications of the "sector principle" etc., are discussed.

37729. TEAL, JOHN JEROME, Jr., 1921- . The Norwegian musk-ox experiment. (American-Scandinavian review, Spring (Mar.) 1954. v. 42, no. 1, p. 33-36, 2 illus.)

Contains account of efforts to transplant the musk ox, as a wild animal, to Svalbard and to the Dovre Mts. of central Norway. In autumn 1929, the Norsk Polarinstitutt released 18 calves from Greenland near Isfjord, Vestspitsbergen. Although the herd was depleted during World War II, a group of 18 animals was seen in 1950. Musk oxen released in central Norway in 1932 and 1938 were killed by the Germans in 1940. Since 1947 calves have been brought from Greenland every year by the Norsk Polarinstitutt. They winter on a farm where feeding habits, sickness, etc., are observed, and are released the following summer.

37730. TEAL, JOHN JEROME, Jr., 1921- . The rebirth of north Norway.

(Foreign affairs, Oct. 1953. v. 32, no. 1, p. 123-34, text map)

Contains survey of background and reasons for present interest of the Norwegian Government in the provinces of Nordland, Troms and Finnmark. Physical geography of the region is briefly described. The history of northern Norway and its peoples from the retreat of the ice sheet 8,000-10,000 years ago is outlined. Important politically and economically until the 14th century, it declined during the Hanseatic League period and was neglected for 400 years. Devastated during World War II by the Germans, it is now undergoing a period of reconstruction under the North Norway Plan (initiated March 1952). Economic conditions are described, with notes on the Lapps. The importance of the area in arctic strategy, its usefulness for air bases bordering the U.S.S.R., and as guardian of the northern sea lanes, are stressed.

37731. TECHNICAL DATA DIGEST. Sky compass developed to aid navigation in polar regions. (Technical data digest, June 1949. v. 14, no. 11, p. 6-7, illus.)

General description and use of the Pfund Sky Compass developed by the National Bureau of Standards in cooperation with the Navy Bureau of Aeronautics. The compass consists of an analyzer for determining the plane of polarization of light, an azimuth circle on which the sun's computed azimuth can be set, and a clock which drives a chosen reference line in synchronization with the sun's apparent motion. The sky compass is of particular value when the sun compass and sextant are not usable, and is most useful and accurate in polar regions.

in German. **Title tr.:** Peoples, folk
groups and tribes in the former territory
of the U.S.S.R.; history, dissemination,
race, religion. This work was first pub.
in Oct. 1941 as: *Verzeichnis der Völker,
Volksgruppen, und Völkstämme auf dem
Gebiet der ehemaligen UdSSR.*

Contains informations on 165 peoples
or ethnic groups. Names of peoples are
given in German, Russian, and native
terms. Statistics of population are based
on the censuses of 1897, 1926, 1939, and
an estimate in 1941. For each group,
brief data are given on numbers, history,
territory, racial characteristics, language,
religion and occupation. An extensive
bibliography is added (p. 117-55).
Northern peoples included are Zyryans,
Ostyaks, Voguls, Samoyeds, Yakuts,
Tungus, Paleo-Siberians, Asiatic Eskimos,
and Aleuts.

1908-** , and A. M. FLEMING. Long
term changes in hydrographic conditions
and corresponding changes in the abun-
dance of marine animals. (In: Inter-
national Commission for the Northwest
Atlantic Fisheries. Annual proceedings,
v. 3, 1953, p. 79-86, 4 fig.) 7 refs.

Account of conditions with particular
bearing on ICNAF subareas 2 and 3
(Labrador Sea and Grand Bank of New-
foundland), based largely on commercial
catches and newspaper records. Excep-
tional increase of mackerel hauls on the
Newfoundland coast since 1945; similar
increase in the yield of lobsters point to
an effect of warmer sea temperatures;
but other factors, primarily economic,
often mask this effect as, apparently, in
the case of cod. **Copy seen:** CaMAI.

37737. TEMPLETON, JAMES B. Arctic application of the heat pump. (Engineering journal, Dec. 1954. v. 37, no. 12, p. 1607-1609)

A heat pump conceived by Dr. Misener in 1950, designed by Mr. Hooper at the University of Toronto, and built by the Canadian Ice Machine Co., Ltd. is described. The pump which employs a 15 horsepower diesel engine driving a compressor which extracts the latent heat of fusion from water frozen on the horizontal stainless steel drum of a York DER Flake machine, has been installed at Fort Churchill since 1950. The heat source is water supplied through long water lines under turbulent flow. The unit was primarily designed for water heating. Overall performance characteristics and design features are discussed.

It is stressed that the principle of this device has long been known; recent improvements in compressors, motors, heat exchangers, together with rising cost of fuel and transportation, make the heat pump practicable and economically advantageous. It has special advantages for arctic and subarctic installations. Author is head of the Engineering Section, Defence Research Northern Laboratory, Fort Churchill. **Copy seen:** DBS.

37738. TEMPLETON, LEE. The land we bought from Cain. (Steelways, Dec. 1954. v. 10, no. 6, p. 8-10, 7 illus. (1 col.))

Contains popular account of the iron ore deposits and mining operations in the Knob Lake region on the northern Quebec-Labrador border. Seventy to eighty percent of the production will go by deep-water routes to Atlantic Coast ports, the rest by way of the St. Lawrence to the Great Lakes. **Copy seen:** DGS.

37739. TENER, J. S. A preliminary study of the musk-oxen of Fosheim Peninsula, Ellesmere Island, N.W.T. Ottawa, Feb. 1954. 38 p. 6 illus., text map, 6 tables. Mimeographed. (Canada. Wildlife Service. Wildlife management bulletin, series 1, no. 9) 52 refs.

Contains results of the writer's investigations for the Canadian Wildlife Service, Apr. 19-Aug. 20, 1951, in the Slide Fjord region (80°09' N. 86°15' W.) near the Eureka weather station, northern Ellesmere. An attempt was made to secure information on certain phases of the life history of musk oxen to aid planning for their management. History and range of the animal, and physical geography of the region are

briefly described. Herd observation, pathological studies (including examination for external and internal parasites) and mortality studies were made. Factors discussed are: composition of herds (adults, immatures, yearlings, calves); observations of calving; mating activities; movements from winter to summer ranges; range studies; feeding habits and botanical composition of the range; parasites; and wolf predation.

37740. TEPOV, V. P. K voprosu o sootnoshenii polov u dikikh mlekopitafushchikh. (Zoologicheskii zhurnal, Jan.-Feb. 1954. t. 33, vyp. 1, p. 174-79) Text in Russian. **Title tr.:** A contribution to the problem of sex ratio in wild animals.

Contains a preliminary ecological study based on observation of 25 species of mammals living in various preserves, including the Pechora-Ilych sanctuary in Arkhangel'sk province (tables 1-3). The most important conclusions reached are as follows: in all investigated species the sexes are not equal numerically, this is especially true for the young, in most cases the males are more numerous; in populations living under different ecological conditions, the more numerous sex differs in different species; in large litters the males outnumber females; and the quantitative ratio of sexes is not a random factor but depends on environmental conditions.

37747. THALBITZER, WILLIAM CARL, 1873-. A note on the derivation of the word "Eskimo" (Inuit). (American anthropologist, 1950, v. 52, no. 4, pt. 1, p. 564)

Discusses origin of the word, concluding that it is not, as usually thought, from Algonkian Indian *aske* "raw meat" and *moho* "to eat", but from *Excommunicat* "the excommunicated ones," the name given by the French Jesuits in 1605 to the pagan Eskimos of Labrador who were hostile to the French and their Algonkian allies. Author's theory is challenged by E. Benveniste, q. v. **Copy seen:** DSL.

37748. THALBITZER, WILLIAM CARL, 1873- . The voyage of Powell Knutsson; a lost expedition to Greenland—and further to Vinland? (Stuttgart. Linden-Museum für Länder- und Völkerkunde. Jahrbuch, 1951. Neue Folge, Bd. 1, p. 92-97) 6 refs.

"This is an amended rendering in English translation of a Danish article printed in *Det Grønlandske Selskabs Årsskrift*, København, 1948" (*Arctic Bibliography*, No. 17571).

Contains translation and comments on the King Magnus letter of command, issued at Bergen on Oct. 28, 1354, in which he ordered Powell Knutsson to make a trip to Greenland in order to support the Christian faith. Knutsson reached the western colony, went further, probably to Vinland, and vanished. Rare fur products reached Europe in the Middle Ages, coming from America via Greenland. In 1347 a Greenland ship with a crew of 17 that had been in Markland, happened to be driven right to Iceland by storms.

Contains the first record of this bird in North America, obtained on May 4, 1913, by J. Dixon and W. S. Brooks, in the harbor at Attie Island of the Aleutian chain, during their trip on the schooner *Polar Bear*.

Copy seen: DSI; MH-Z.

37750. THAYER, JOHN E. *Limonites ruficollis* in Alaska. (Condor, Sept.-Oct. 1909. v. 11, no. 5, p. 173)

Note on a sandpiper collected by A. H. Dunham of Nome, Alaska, and identified by Prof. R. Ridgway as *Limonites ruficollis*, a first record of this bird being taken in Alaska.

Copy seen: DSI; MH-Z.

37751. THAYER, JOHN E. Nesting of the Kittlitz murrelet. (Condor, May-June 1914. v. 16, no. 3, p. 117-18)

Contains notes on nesting and eggs of *Brachyramphus brevirostris*, found by F. F. Kleinschmidt on the side of Pavloff Mountain, Alaska, June 10, 1913.

Copy seen: DSI; MH-Z.

37752. THÉRIEN, MERCEDES. Contribution à la physiologie de l'acclimatation au froid. (Laval médical, Oct. & Nov. 1949. v. 14, p. 1062-1110, 1192-1257, illus., tables) 182 refs. Text in French. *Title tr.*: Physiologic contribution to the acclimatization to cold.

Contains an extensive study of the role of ascorbic acid (vitamin C) in the physiology of adaptation to cold. The first part (p. 1063-78) deals with earlier work on the physiological effects of cold on mammals and man, and the problem of acclimatization. This is followed by the author's experimental study on white rats and guinea pigs. The effects of short and long exposures on the vitamin content of several organs (liver, kidney, testis, etc.), vitamin C utilization during cold; effects of vitamin administration on cold acclimatization; excretion of vitamin C; etc., are studied and discussed.

37753. THERKILSEN, KJELD RASK. Grønland. Greenland. København, Schönbergsk forlag, 1953. 127 p. 182 illus., map. Text in Danish and English throughout.

Contains brief popular introduction followed by photographs with brief descriptive text depicting the physical features of the country and activities of its inhabitants. Fisheries, towns, farms and livestock, mining, religion, education, health care and hospitals, sports, industries, wildlife and flowers, administration and government, hunting, the Danish Peary Land Expedition 1947-1950, archeology, geological and meteorological work, shipping, and life of the Polar Eskimos of the Thule region are treated in turn.

Copy seen: DLC.

37754. THIBERT, ARTHUR. English-Eskimo, Eskimo-English dictionary. Ottawa, Research Center of Amerindian Anthropology, 1954. 174 p. 19 refs.

Contains practically all words generally used by Canadian Eskimos, together with terms of particular interest and usefulness, used only by local bands. Notes on ideas suggested by certain words appear under the word's initial letter in the Eskimo-English section of the dictionary. *Appendices* include: infixes and their use; declension of nouns and personal pronouns; numerals; conjugation of verbs; geographical names; terms of relationship and parenthood; words relative to the human body; Arctic game.

This dictionary is based on the author's 27 years' missionary work at Chesterfield, Eskimo Point, Southampton Island, Baker Lake, and Churchill, with extensive travel in the Eastern Arctic; and it embodies the work of Bourquin, Erdmann, Bishop Turquetil (O. M. I.), and Fathers Ducharme and Fafard (O. M. I.).

37755. THILENIUS, OTTO GUNTRAM. Quantitative und qualitative Untersuchungen über die Temperaturveränderungen der Haut auf Applikation eines neuen Hauthyperämikums. (Zeitschrift für die gesamte experimentelle Medizin, 1953. v. 121, no. 1, p. 12-31, illus., table) 40 refs. Text in German. **Title tr.:** Quantitative and qualitative investigations on temperature changes of the skin following the application of a new hyperemic drug.

A salve, Finalgon and its two components were studied with respect to their temperature-raising properties. Both components effected rises of 5°-8° C., though at different time intervals; hence the long effect of Finalgon (60-90 min.). The effect differs depending on the skin region and initial temperature.

Copy seen: DSG.

37756. THOMAS, CHARLES W. 1903-. Arctic shiphandling. (Navigation, Sept. 1954. v. 4, no. 3, p. 125-29)

Contains practical suggestions for navigating in ice. Icebergs are aids to navigators since ice anchors may be planted on their lee side and the ship be pulled through obstinate fields of pack ice; an iceberg may provide a breakwater in open sea, and indicate submarine hazards. Sea ice consists of old and new ice, the former must be "respected but not feared." Experiences encountered by the author in navigating through arctic sea ice are related, and suggestions for operating in an ice convoy are given.

Copy seen: DLC.

37757. THOMAS, CHARLES W. 1903-. Our vulnerable flank. (United States Naval Institute. Proceedings, Feb. 1951. v. 77, no. 2, p. 146-51, 3 illus.)

Contains discussion of the importance of mobility in arctic warfare by former commander of the U. S. Coast Guard cutter *Northland* and ice-breakers *Eastwind* and *Northwind*. Russia's experience with an iceworthy merchant fleet, with ice-breaker support, is noted, and

the necessity for surface support to our air bases in the Arctic is stressed. Fundamental to naval operations is the transport vessel (personnel, supplies, fuel); five prerequisites in its construction for work in ice are: maneuverability, ice-worthiness, economy of operation, relatively small size, and construction in quantity. These are discussed in turn; the importance of ice-breaker support, development of underseas craft for under-ice operation, and training of personnel in arctic warfare are noted. Research in ship design and in geophysics is needed.

37765. THOMPSON, HUGH RALPH, 1926- . One square mile of ice: an experiment in geographical analysis. (Illinois Academy of Science. Transactions, 1952. v. 45, p. 68-69, 2 text maps)

Contains very brief description of the southernmost ice dome, Vegafonna (approx. 79°30' N. 21° E.), on Nord-austlandet, Svalbard, in an attempt to evaluate the area in terms of man's needs and prospects. Comments are made on topography, local climate, animal and bird life, transportation, and hunting.

Copy seen: CaMAI; DLC.

37766. THOMPSON, HUGH RALPH, 1926- . Pangnirtung Pass, Baffin Island: an exploratory regional geomorphology. A thesis presented to the Faculty of Graduate Studies and Research in partial fulfillment of the requirements for the degree Doctor of Philosophy. Montreal, Aug. 1954. 227, 52 p. 106 illus., 4 text maps, profiles, cross-sections. Unpublished Ph. D. thesis, McGill University. 139 refs.

Contains results of the writer's field work as participant in the Arctic Institute of North America's Baffin Island Expedition, May 13-Sept. 6, 1953. His main purpose was to record landforms in the valley of Pangnirtung Pass (approx. $66^{\circ}05'-67^{\circ}$ N. $64^{\circ}35'-66^{\circ}$ W.), relationships between them, and therefore the assemblages of landforms displayed; also "to report on the condition of the present valley glaciers, and to give a provisional estimate of the regional denudation chronology." The valley is described geologically as a unit; landforms in each of three sub-regions are described, and the nature and evolution of valley and surrounding area are examined. *Appendices:* (A) recent glacier variations; (B) section in the Owl Valley Sands; (C) problems for the future.

"Cumberland Peninsula was uplifted and block-faulted in the Pliocene. It was first dissected to a depth of 1100-1500 feet and later to a maximum of 6600 feet in the great trench of Pangnirtung Pass. The latter was created by alternating rivers and glaciers in a favourable geological structure. The intensity of vertical corrasion has allowed patches of the old peneplane to be preserved beneath summit icecaps. The Pass, which is composed of three distinctive sub-regions, is lined by hanging valleys whose altitudes are inversely proportional to the volumes of their glaciers. The latter's 'recent advance' occurred before 1850. Decay had set in by 1883 and all the glaciers are now thinning because of a lengthened ablation season. Ice cores in moraines left by the last trunk glaciers to occupy Pangnirtung Pass and Fiord are also melting. Around Pangnirtung Fiord raised beaches above ten feet are lacking. In the north they occur to fifty feet."—*Author's abstract.*

THOMPSON, SETON HAYES, 1906- , see U. S. Fish and Wildlife Service. Alaska fishery and fur-seal industries, 1948-52. 1954. No. 37911.

37768. THOMPSON, STITH, 1885- . Tales of the North American Indians. Cambridge, Harvard Univ. Press, 1929. xiii, 386 p., fold. map; about 400 refs.

An anthology of American Indian tales, arranged according to the subject (mythological, trickster, hero tales, etc.) with comments, notes and references. All the material has been taken from the printed sources. Includes some types of tales typical for Eskimos (6 texts), Tsimshians (5), Tlingits (2), and Haida (1). The Eskimos are characterized as poor in explanatory myths and trickster tales. Insignificant animal stories and accounts of monsters and pursuits occupy a large proportion of Eskimo mythology. Tales of the North Pacific Coast are of a considerable variety. The tribes of the Mackenzie River district have little to distinguish their tales from those of their neighbors. In tales of certain Indian tribes the European influence is apparent.

THOMPSON, THOMAS GORDON, 1888- , see Goodman, J. R., and T. G. Thompson. Characteristics . . . waters . . . from Dutch Harbor . . . 1940. No. 34944.

37769. THOMPSON, WILL FRANCIS, Jr. Environmental handbook for Whittier, Alaska. Natick, Mass., Apr. 1954. 54 p. 8 illus., 6 text maps, 28 graphs. (U. S. Quartermaster Corps. Environmental Protection Division. Report, no. 226) 29 refs.

A study of the physical setting of this military post (60°45' N. 148°45' W.) 65 miles southeast of Anchorage, prepared to aid military authorities in selecting sites and times for testing programs. Location, climate, avalanche danger, topography, glacial deposits, periglacial landforms, soils, ice conditions in the Chugach Mts., and vegetation are briefly described. Graphs showing monthly temperatures, precipitation, cloudiness, and snowfall are appended.

37770. THOMPSON, WILL FRANCIS, Jr. Katmai geographic studies. (In: Luntz, R. S., and others. Interim report on Katmai Project . . . Alaska. Mar. 1954. p. 26-49, table)

Contains information derived from field observations by the author in Katmai National Monument in summer 1953, and in the western Aleutians, 1946-1947, and Kamishak watershed, 1948, (the last reported as *Arctic Bibliography*, No. 17617). In 1953 approx. 1,200 miles of aerial survey were made, including 380 by helicopter; work was also done on foot and by boat. Climate, topography, vegetation and soils of the Monument are described in some detail and compared with those of the Aleutians and Alaska mainland. The region occupies a transition zone between the very maritime climate of the Aleutians and the more continental climate of the mainland.

37772. THOMSON, ANDREW, 1894- The meteorologist looks at the oceans. (Royal Society of Canada. Proceedings, June 1949. ser. 3, v. 43, sect. 1, appendix D, p. 157-62, table)

Contains discussion of the importance of meteorological observations (including work of the ocean weather ships in the North Atlantic) and knowledge of heat exchange over the sea. The problem of the freezing-over of Hudson Bay is discussed briefly, and temperature records for Churchill on the west coast and Port Harrison on the east coast are given. Flights over the Bay in winter have determined that it does freeze completely, and by comparing weather records for east and west coast, it is possible to determine approximately when the freeze-over occurs each year.

37774. THORARINSSON, SIGURÐUR, 1912- . Tvöfaldar jadarurdir í Kangerdlugssuak. (Jökull, 1952. Ár. 2, p. 8-9, illus.) Text in Icelandic. Summary in English. **Title tr.:** Double lateral moraines in the Kangerdlugssuak region.

Contains note on recession of glaciers along this fiord in East Greenland (68°23' N. 32°15' W.), observed on a flight June 25, 1950. Two well-marked moraine systems have been left, as noted also in northeast Greenland and Jan Mayen. The outer system may mark the maximum advance of the glaciers during the mid-18th century; the inner,

their position in middle or late 19th century. Study of vegetation on and outside the moraines may help to fix dates and correlate moraines in different regions. **Copy seen:** DGS.

37776. THORSTEINSSON, RAYMOND, and Y. O. FORTIER. Report of progress on the geology of Cornwallis Island, Arctic Archipelago, Northwest Territories. Ottawa, 1954. 25 p. fold. map, cross-section, 4 tables. (Canada. Geological Survey. Paper 53-24) 5 refs.

Coastal regions of the island were investigated in summer 1950 by the authors and T. A. Harwood, and in summers 1951 and 1952 by Thorsteinsson (with five assistants) for the Geological Survey of Canada. A freighter canoe with outboard motor was used in circumnavigating the island. Ordovician to Devonian, late Paleozoic (or Mesozoic?), and Cretaceous (or Tertiary?) unaltered sedimentary formations were found. Glaciation, glacial features, emerged strand lines, structural geology, also oil, gas, and coal possibilities are briefly discussed. Messages from the Austin, Penny, Ross, and Pullen expeditions of 1850-1851, 1853, were found; two facsimiles and extracts are given. **Copy seen:** DGS.

and petroleum possibilities in Canadian Arctic Islands. 1954. No. 34735.

37777. THUMAN, WILLIAM C., and A. G. BROWN. Preliminary studies of the intensity of light scattered by water fogs and ice fogs. (Science, Dec. 10, 1954. v. 120, no. 3128, p. 996-97, fig.) 9 refs.

Report of photometric investigations of the angular variation of light intensity scattered by artificially produced water and ice aerosols, and an evaluation of the usefulness of photometric techniques for the study of Alaskan ice fogs and supercooled water fogs. The experiments were conducted in a home freezer which contained a microphotometer. Characteristic curves of the angular variation of light intensity scattered in a horizontal plane by the water and ice aerosols and a theoretical curve for monodisperse water droplets are shown. All tests of unseeded and seeded water fogs showed high scattering intensities at low scattering angles. **Copy seen:** DLC.

37778. THUMAN, WILLIAM C., and E. ROBINSON. Studies of Alaskan ice-fog particles. (Journal of meteorology, Apr. 1954. v. 11, no. 2, p. 151-56, 6 illus., 3 graphs) 10 refs.

"During the 1952-1953 winter, studies were made at Eielson Air Force Base, Alaska [26 mi. southeast of Fairbanks], of ice fog and other low-temperature aerosol phenomena. The particulate material, collected by settling onto glass slides at temperatures below -20 C., was classified as hexagonal plates, prismatic columns, and droxtals, a droxtal being an equant solid particle with rudimentary crystal faces. The hexagons and prisms are several times larger than the droxtals, and all three types tend to be smaller at lower temperatures. The droxtals increase in relative number with decreasing temperatures, and the high incidence of restricted visibility at low temperatures is attributed to the presence of the droxtals rather than the crystals."—*Authors' abstract.*

37779. THUMAN, WILLIAM C., and E. ROBINSON. A technique for the determination of water in air at temperatures below freezing. (Journal of meteorology, June 1954. v. 11, no. 3, p. 214-19, 2 diagrs., graph, 4 tables) 10 refs.

"An investigation of ice fog in Alaska required a technique for the determination of the water content of the atmosphere at temperatures between -20 to -55 C. . . . A field sampling-technique was developed which consisted of extracting the contained water by bubbling the air through absolute methanol, an aliquot of which was then titrated with Karl Fischer reagent. A visual end-point was applicable. The method permitted rapid titration, required simple apparatus, and measured the amount of moisture in the air directly to within two percent of the absolute values. A method of filtering the air in order to separate water vapor from precipitated water was also developed for sub-freezing temperatures. Humidity observations were extended to levels above the surface by drawing a known volume of air into the bubbler through polyethylene tubing supported by captive balloons. Results obtained with these techniques are included in a discussion of humidities determined at Eielson Air Force Base, Alaska [26 mi. southeast of Fairbanks], during the winter of 1952-1953"—*Authors' abstract*. **Copy seen:** DGS.

37782. TIEDEMANN, KARL-HEINZ. Die Polarforschung seit dem 2. Weltkrieg. (Geographische Rundschau, Apr. 1954. Jahrg. 6, nr. 4, p. 138-43, 4 text maps) Text in German. **Title tr.:** Polar research since World War II.

Includes (p. 138-41) a summary of arctic expeditions and research since 1947, with notes on Danish, French, and British expeditions to Greenland, establishment of weather stations in the Canadian Arctic, expeditions to Foxe Basin, Baffin Island, and Labrador, archeological work and Juneau Ice Field project in Alaska, Soviet use of the Northern Sea Route, expeditions to Taymyr Peninsula and Novaya Zemlya, Norwegian expeditions to Svalbard, U. S. research on ice islands, and transpolar flights of the Scandinavian Airlines System. **Copy seen:** DGS.

37783. TIFFANY, LEWIS HANFORD, 1894- . The algal genus *Bulbochaete*. (American Microscopical Society. Transactions, 1928. v. 47, no. 2, p. 121-77, plates 14-23) 47 refs.

Cell structure and reproduction, distribution and taxonomy are considered; a key is given to the species, varieties and forms; 51 species, 15 varieties and seven forms are listed with synonyms, dimensions and data on distribution. At least eight of the species occur in Alaska and Greenland, but the genus is worldwide in distribution, from arctic to tropical regions. Alphabetical summary of species, varieties, forms and synonyms (table 1-2) is appended. **Copy seen:** DSI; MH-Z.

37784. TIKHOMIROV, BORIS ANATOL'EVICH, and O. S. STRELKOVA. Mikorizy rastenii Arktiki. (Akademiia

nauk SSSR. Doklady, July, 1954. nov. seriia, t. 97, no. 2, p. 337-39) 10 refs. Text in Russian. **Title tr.:** Mycorrhiza of arctic plants.

Contains a study of the relationship of higher plants and soil fungi under the conditions prevailing in the tundra of western Taymyr Peninsula. Out of 92 investigated species (in 21 families), mycorrhiza was found in 27 species. The characteristics of flowering plants are noted and discussed. Conclusion is offered that conditions prevailing in the Arctic are not beneficial for the development of mycorrhiza mycelium. It is noted that only the endotrophic type of mycorrhiza was found on the Taymyr Peninsula. **Copy seen:** DLC; MH.

37785. TIKHOMIROV, BORIS ANATOL'EVICH. O znachenii izbezhavshikh pleistosenovogo oledeneniia chastel' Evraziatskoj Arktiki dlia formirovaniia ee flory i rastitel'nosti. (Priroda, 1946, no. 10, p. 74-79) 42 refs. Text in Russian. **Title tr.:** On the significance of unglaciated Pleistocene sections of the Eurasian Arctic in the formation of its flora and vegetation.

Contains a review and discussion of the theories and opinions of various botanists and paleontologists on the origin of the flora and vegetation of the Arctic. The author notes the heterogeneous character of the arctic vegetation, which includes many emigrants from mountainous and forest regions of the Holarctic. The importance of those sections of the Arctic which were not engulfed by Pleistocene glaciation lies in the fact that they formed bases for the northward migration of southern elements. The importance of Angara continent in the formation of arctic vegetation and the migration routes of various elements are discussed. **Copy seen:** DLC; MH.

37786. TIKHOMIROV, BORIS ANATOL'EVICH. Pamiat' B. N. Gorodkova. (Botanicheskii zhurnal, Jan.-Feb. 1954. t. 39, no. 1, p. 139-49, port.) Text in Russian. **Title tr.:** In memoriam: B. N. Gorodkov.

Obituary of Boris Nikolaevich Gorodkov, 1890-1953, prominent Russian botanist, geographer and explorer of the Soviet Arctic, with data on his 25 expeditions, most of them in the North: Kola Peninsula, Northern Ural, Pechora River, Taymyr, Chukotsk Peninsula, Yakutsk region, New Siberian Islands, Vrangeli Island, etc. His interest in

botanical geography, arctic soils and melioration of permanently frozen ground is stressed. His publications are not listed here, but most (110) are given with biographical data by S. Iu Lipshits in *Russkie botaniki*, v. 3, p. 3-7, 1950.

37789. TIMES REVIEW OF INDUSTRY. Canada as a uranium producer; rich deposits at Beaverlodge and Port Radium. (Times review of industry, Sept. 1953. v. 7, new ser. no. 80, p. 83, 85, illus.)

Includes description of mining at Port Radium (Great Bear Lake, Mackenzie District). The deposits were discovered in 1930 and played an important part in World War II and the post-war period.

The Eldorado Mining and Refining Co., now operated by the Canadian Government, supplies uranium from existing sources to the U. S. Atomic Energy Commission and carries on the search for new deposits. The mines, ore dressing process, and recovery of tailings from Great Bear Lake are described briefly. Production from the new Ace mine at Beaverlodge Lake (Sask.) will be 40 percent greater than present production rate at Port Radium.

Copy seen: DLC.

37790. TIMES REVIEW OF INDUSTRY. Canada's growing output of iron ore. New supply from Quebec-Labrador field. (Times review of industry, May 1954. v. 8, new ser. no. 88, p. 84, 87, text map)

Includes, in a general discussion of Canadian deposits, a brief note on the Knob Lake deposits, estimated at 417 million tons. Shipment should begin in Aug. 1954. Two more mines will be in operation in 1956, and with the building of the St. Lawrence Seaway, 20 million tons of ore a year will be shipped, most of which will go to the United States.

37796. TITOV, E. I. Ocherednye zadachi tungusovedeniia. (Sibirskii nauchno-issledovatel'skii s'ezd. 1st, Novosibirsk, 1926. Trudy, 1928. t. 5, p. 144-54) Text in Russian. **Title tr.:** Further objectives in the field of Tungus studies.

Contains a brief review of work on Tungus ethnography, anthropology and linguistics in the past two hundred years. Tasks for the near future are outlined in which scientific must be combined with practical work. Every ethnographic investigation must start with the people's economic life. Four types of Tungus economy are sketched: (1) hunting, fishing, gathering (nuts and berries), timber floating; (2) fabrication of clothing, leather work, and luxury objects, implement making; (3) animal husbandry and agriculture; (4) professional trades, as guides, farm and transport workers, forest custodians. There are about 40,000 qualified Tungus hunters. Reindeer breeding declines; loss of herds and involuntary change to sedentary life leads to extinction of this people: they cannot adapt to the new form of life; number of children decrease; mortality of children and young women increases. Tungus beliefs (wolf is taboo), social organization, cultural relations with remote peoples (e. g. American Indians and Japanese), process of assimilation, etc., are noted. Importance of linguistic and folkloristic investigations is stressed. The writer spent the previous eight years among the Tungus of northern Pribaykal'ye.

Copy seen: DLC.

37797. TITUS, EDWARD SHARPE GAIGE, 1873-. The genera *Hypera* and *Phytonomus* (Coleoptera, Family Curculionidae) in America, north of Mexico. (Entomological Society of America. Annals, Dec. 1911. v. 4, no. 4, p. 383-473, plates 24-34, text

maps) Revised from a thesis for the degree of Sc. D. at Harvard University, May 1, 1911. Contributions of the Entomological Laboratory, Bussey Institution, Harvard University, no. 39.

Contains historical notes, characters of the tribe Hyperini and both genera; a table of the species and detailed descriptions of thirteen of these beetles, with synonyms, literature references, data on metamorphosis, geographic distribution in this and other continents; their food plants and enemies, life history and record of North American specimens. *Phytonomus diversipunctatus* (Greenland), *P. seriatus* (Pribilof Islands, Kodiak and Nome, Alaska) and *P. trivittatus* (North-west Territories, Canada) are included.

Copy seen: DLC; MH-Z.

TIULINA, L. N., see Leningrad. Arkhticheskii . . . institut. Anadyrsko-Chukotskaiia . . . ékspeditsiia . . . 1933. No. 35852.

37798. TIURDENEV, A. P. Sel'skokoziial'stvennaia vystavka v Taymyre. (Sad i ogorod, Jan. 1954, no. 1, p. 75) Text in Russian. **Title tr.:** The agricultural fall fair in Taymyr.

The seven days' fair at Dudinka in Oct. 1953 signalized the development of local agriculture and horticulture; the achievements of sovkhoses "Pol'arnyi," "Sever," "Zapol'ar'e," as well as those of the Taymyr Experimental Station, are noted, particularly their success in growing potatoes, cabbages, beets, turnips, and tomatoes in protected ground, hotbeds, and hothouses; the progress of the arctic agriculture generally, is stressed

Copy seen: DLC.

37799. TIURDENEV, A. P. Sośialisticheskaiia rekonstruktsiia sel'skogo khoziastva IASSR i rabota kraevedov. (Sovetskoe kraevedenie, Aug. 1935, no. 8, p. 31-39, illus., 4 plates) Text in Russian. **Title tr.:** Socialist reconstruction of farming in the Yakut A. S. S. R. and the tasks of regional students.

Contains survey of farming and animal husbandry and of their collectivization. In 1917, the cultivated area in Yakutia was 36,800 hectares, with 510,000 head of cattle and 142,000 horses. By 1926 these had increased to 42,000 hectares, with 577,000 of cattle and 193,000 horses; in 1931, to 50,000 hectares and in 1934, 83,600 hectares. Collectivization is a powerful factor in farming progress, and 29, 41.7, and 46.7 percent of the

area under cultivation had been absorbed by sovkhoses and kolkhozes by 1931, 1932, and 1935 respectively. The development of animal husbandry was not so successful: cattle were fewer in 1934 (486,600) than in 1917; and during 1930-33, reindeer decreased by 50 percent, due in part to the owners slaughtering with collectivization in prospect. Reindeer in 1935 totalled 121,900, of which 27,600 head were in sovkhoses and 44,300 in kolkhozes. The regional students are exhorted to help farming and animal husbandry attain complete success.

Since spring 1947 part of the mining at Malmberget (67°10' N. 20°40' E.) has been done by drilling holes about 90 ft. long. Various mining methods are described: horizontal-radial-diamond drill-

ing, Noranda method, combination of shrinkage stoping and long-hole mining, and long-hole mining with parallel holes. Results are given. The diamond drills used, percussion drilling, loading, and blasting are also described. Sixty to 70 percent of the orebodies in Malmberget are expected to be suitable for long-hole mining.

peditions of the Academy of Sciences of the U.S.S.R. to the northern regions of the Yenisey.

In connection with the Second International Polar Year, the Polar Commission of the Academy of Sciences organized two expeditions to the lower Yenisey region in 1932, both headed by the author. The Tunguska expedition, under the leadership of A. M. Rubin, investigated in June-Sept. the geomorphology, soil and flora of that river basin up to Tutonchana River mouth, and set up a meteorological station at Noginsk. (cf. *Arctic Bibliography*, No. 25706). The Khatanga expedition led by A. N. Smesov organized a meteorological station at Dudinka, investigated the Lake Boganida region, but due to lack of transportation facilities, could not reach the Khatanga and had to continue its work in the 1933. cf. *Arctic Bibliography*, No. 16234.

37810. TOLMACHEV, INNOKENTII PAVLOVICH, 1872-1950. Po Chukotskomu poberezh'iu Ledovitogo okeana; predvaritel'nyi otech nachal'nika ekspeditsii po issledovaniu poberezh'ia Ledovitogo okeana ot ust'ia Kolymy do Beringova proliva, snariazhennoi v 1909 godu Otdelom Torgovogo Moreplavaniia Ministerstva Torgovli i promyshlennosti. S.-Peterburg, Ekonomicheskaiia Tipolitografiia, 1911. 117 p. 11 plates, text-map, fold. map. Text in Russian. **Title tr.:** Along the Chukotsk coast of the Arctic Ocean; preliminary report of the chief of the expedition for exploration of the arctic coast from the Kolyma to Bering Strait in 1909, sponsored by the Department of Commercial Navigation of the Ministry of Commerce and Industry.

In 1908, plans to speed development of northeasternmost Asia were discussed in Russian governmental circles, and in 1909, an expedition, headed by the author, with M. Ia. Kozhevnikov as topographer, and E. F. Veber, geodesist, was sent to explore the Chukotsk coasts. The party reached Yakutsk Mar. 31,

and (with G. Ī. Sedov's hydrographic expedition en route to the Kolyma mouth) proceeded via Verkhoyansk to Nizhne-Kolymsk (June 2), the starting point of its exploration. Using horses, reindeer, dogs and small boats (baydars), the writer's party traveled eastward along the coast to Dezhnev (Nov. 19) a village in the vicinity of Cape Dezhneva. During the main party's return journey to Sredne-Kolymsk (Dec. 6-Feb. 5), E. F. Veber made a coastal trip from Cape Dezhneva to Cape Chaplina.

The preparations and journey are recounted stage-by-stage (p. 1-83): travel conditions, difficulties of transportation lack of equipment (e. g., no thermometer for temperature readings), labor problems with Cossacks in the party and with Chukchi workers and drivers; poor condition of horses, reindeer and dogs, etc. The scientific work and results of the expedition are summarized (p. 84-95): 2,550 versts of surveying carried out by Kozhevnikov and Veber; determination of astronomical points by Veber and by the author; a general geomorphic, hydrological and geological outline of the coastal area (p. 88-95). Notes are given on Chukchis (p. 95-106): their division into nomadic or reindeer and settled, or dog-breeding Chukchis; significance of reindeer husbandry in their economy; dwellings, social organization, feeling of political independence, influence of American traders who supplied the population with weapons and other goods, and the dwindling of Russian influence. Ice conditions off the coasts are discussed and the feasibility of regular navigation is asserted (p. 106-112). The trade and commerce of the area are evaluated and imports to the Kolyma and Chukotsk Districts are estimated as approaching 300-400 tons annually. Thirty excellent photographs (mostly the author's) showing villages, camps, natural features, native types and activities; also fold. map showing travel route and location of astronomical points and a sketch map of Cape Severnyy (or Ryrkaypiy, now Cape Shmidt) are included.

37811. TOLSTOI, LEV NIKOLAEVICH. *Graf, 1828-1910.* Pyn'yltelté "Azbukalpy;" rasskazy iz "Azbuky." Na chukotskiĭ ūzyk perevel Uvauva. Risunki i oblozhka V. M. Firsova. Leningrad, Uchpedgiz, 1949. 99 p. illus. **Title tr.:** Tales from the "Elementary book;"

translated into the Chukchi language, by Uvauva. Cover and illustrations by V. M. Firsov.

A reading book for young children with text in Chukchi (Cyrillic alphabet) and the Russian original; nine short tales written by L. N. Tolstol for pupils of his school in Yasnaya Polyana 75 years ago.

Copy seen: DLC.

37812. TOLSTOV, S. P. Soviet ethnography. (Anglo-Soviet journal, Winter 1950-1951. v. 11, no. 4, p. 12-26) Abridged and translated by R. Sayers from *L'etnografia sovietica* pub. in *Rassegna della stampa sovietica*, July-Aug. 1949, v. 3, no. 7-8, p. 78-100.

Contains a Soviet ethnographer's review of Russian work in the field of cultural anthropology in the Soviet period. Ethnography based on dialectical materialism, is considered an integral part of Soviet Marxist-Leninist historical science, and Russian ethnographers follow a consistent historical materialism in their research. All other schools, exponents of "present-day bourgeois ethnography" in the western "capitalistic" world which do not follow this method, are sharply criticized and rejected. Two centers of ethnographic instruction were established after the Revolution: one in Leningrad, directed by L. N. Shternberg and V. G. Bogoraz, and the other in Moscow. The work of Committee of the North (its official name frequently is changed), and that of Institute of the Peoples of the North (Institut narodov Severa) is outlined. The Soviet ethnographers were directed to pay special attention to two problems: (1) ethnogenesis in the broadest sense; a special Ethnogenesis Commission was created and its session of 1940 was devoted to the ethnogenesis of the northern peoples; (2) the structure of primitive society with emphasis on matriarchal survivals and the communistic form of primitive economy. The idea of "totemistic society" was sharply criticized and survivals of the matriarchal order were found among the Tungus, Ostyaks, Voguls and other peoples. The work of prominent Soviet ethnographers (A. M. Zolotarev, S. A. Tokarev, V. N. Chernetsov, A. P. Okladnikov, and others) are mentioned.

(Zoologicheskii zhurnal, May-June 1954. t. 33, vyp. 3, p. 677-92, illus.) 26 refs. Text in Russian. **Title tr.:** Adaptive types of the cetacean order; a contribution to the question of ecological classification of Cetacea.

Contains an attempt at a new classification of cetaceans, based on morphological and ecological characteristics of these aquatic mammals. They are divided into two principal groups: (1) strainers, which feed on small marine organisms strained out through baleens, and (2) catchers which feed on larger animals, such as fish, etc. These groups are divided into eleven subgroups by the structure of their rostrums, baleens and teeth. The further subdivision of the subgroups and the structure of adaptive organs of cetaceans and their use are noted. The evaluation of cetaceans, which apparently took place in the seas of Northern Hemisphere, and its stages are discussed.

Historical, and fully documented account of the opening up of the Yukon valley gold fields, in particular the Klondike. Extension of the working

season due to discovery in 1887 of artificial gravel-thawing methods, rich strikes on Bonanza and Eldorado Creeks late in 1896, sensational reports in the United States press in summer 1897, the stampede of '98, problems of transportation, supplies, survey and registration of claims, role of William Olvigie the Dominion surveyor, etc., are treated in turn. Subsequent rushes to Nome 1899 and Fairbanks 1903 are noted, as well as the cosmopolitan character of the gold-seekers and lasting effect of the gold rushes on the population of the area.

Geological character of the area is outlined, as well as the origin of domestic and farm water supply, its recharge and hardness.

Copy seen: DLC.

37828. TRAINER, FRANK WILSON, 1921- . Preliminary report on the geology and ground-water resources of the Matanuska valley agricultural area, Alaska. Washington, D. C., 1953. 43 p. 4 maps (1 fold.), 3 cross-sections, 4 graphs, 5 tables. (U. S. Geological Survey. Circular 268) 26 refs.

Contains results of mapping of surficial deposits and a well inventory and water-level observation program by the writer in the 1949, 1950 and 1951 field seasons. The valley floor is covered to an unknown depth with glacial till, outwash and fluvioestuarine deposits, and nonglacial windblown material; character of the bedrock is unknown. Most wells obtain water from gravel. The water-bearing materials are described and the hydrology of each of the six physiographic units of the area is discussed. Records of 333 wells are given in a table, with information on location, topographic situation, depth, water level, yield, and type of water-bearing material.

37831. TRENEV, VITALII KONSTANTINOVICH, 1908-1953. Dmitrii Leont'evich Ovtšin. (In: Lupach, V. S. Russkie moreplavately, 1953, p. 64-76, text map) Text in Russian.

Contains biographical notes on this Navy officer and account of his activities as head of the Western (Tobol) section of the Great Northern Expedition of V. Bering. He explored the Ob' River mouth in 1734 and 1735 (up to 70°04' N.) on the sloop *Tobol*, and sent land parties to survey and describe the coast between the Ob' and the Yenisey. In 1736 he sailed the *Ob'-Pochtation* into the Kara Sea and entered the Yenisey River. In 1739 he was removed from command, broken to the ranks, and sent to Kamchatka. He participated in Bering's voyage to Alaska in 1741 and survived the winter on the Bering Island. He died in 1757. **Copy seen:** DLC; MH.

37832. *TRESHNIKOV, ALEKSEI FEDOROVICH. V okeane, s vami. (Ogoněk, Nov. 1954, no. 45, p. 13-14, illus., col. plate) Text in Russian. **Title tr.:** On the ocean, with you.

Sketches of everyday life at the drifting station "North Pole-3," by its

* Also appears as: Trëshnikov.

head: conditions of camp life in the spring and summer of 1954; the last rays of the sun seen on Sept. 24; the strain of out-of-door work in the arctic frost, and the relative comfort of the huts; the uninterrupted communication maintained with the mainland, etc. The activities of the station's personnel are noted, as are brief sojourns of visiting scientists; the station's drift across the boundary of the magnetic anomaly, marine biological observations carried out, also observation of the relatively warm layer 75-150 m. below the sea surface, which had been discovered by the High Latitude Expedition in 1950 (1948?) and confirmed by the drifting station "North Pole-2," 1950-1951. Photographs (four) by N. Solov'ev with caption "Week days of station "N. P.-4" (3?), show hut, boat, camp site, scientific work, etc. **Copy seen:** DLC.

37835. TROELSEN, JOHANNES C., 1913- . A geological study of Canyon Fjord, Ellesmere Island, with particular reference to the geological history of the Franklinian Geosyncline. [Montreal,] Feb. 1954. 32 p. 13 illus., 3 maps incl. 1 fold. Typescript. (Arctic Institute of North America. Project no. ONR-73. Terminal report) 18 refs.

Contains results of investigations on the age of the orogenies which have affected this part of central Ellesmere (80°15' N. 83° W.). Field work was done Apr. 20-Aug. 18, 1952. Stratigraphy and structure of the region are discussed. Cape Rawson beds (late Precambrian?) and Middle and Upper(?) Silurian were folded in the post-Middle Silurian - pre-Middle Pennsylvanian interval, truncated by erosion, and unconformably overlain by Middle and Upper Pennsylvanian, Lower Permian, Upper Triassic - Liassic, and Lower Cretaceous sediments. "A later orogenic phase is manifested through a steep overthrust which came from the NW, and which intersects the present surface along the southeastern front of Sawtooth Range and from East Cape northeastwards. In other parts of the region this second orogeny has caused gentle folding. After the second orogeny, coal-bearing sediments were laid down in several places."—From author's abstract.

37836. TROTSKIĬ, I. M. Kolonial'naia politika Moskovskogo gosudarstva v ĭakutii XVII v.; sbornik dokumentov pod obshefel redaktsiei Ė. P. Al'kora i B. D. Grekova, vstupitel'naia stat'ia I. M. Trofskogo. Leningrad, Institut narodov Severa, 1936. xxxii, 280 p., 14 illus. on 6 plates. (Its: Trudy po istorii,

t. 1; also designated: Akademiia nauk SSSR. Istoriko-arkheograficheskii institut. Trudy, t. 5: Materialy po istorii narodov SSSR, vyp. 5) Text in Russian. **Title tr.:** The Moscow state's colonial policy in Yakutia in the XVIIth century; archival materials, compiled with an introduction by I. M. Trotskiĭ, under the general editorship of Ė. P. Al'kor and B. D. Grekov.

In the introduction (p. iii-xxx) some problems of the history of Yakutia in the 17th century are discussed: previous historical publications, the colonial practices of Tsarist Russia, involving the enslavement, exploitation and extermination of natives, are condemned; the problem of taxation of the natives (the ill-famed *iasak*), the self-seeking and reckless irresponsibility of Russian governors, the epidemics and depopulation of the country are outlined. Social organization of the natives and their classes (p. xx-xxvii), and the conflict between different classes of Russian colonizers themselves are sketched.

The collection of 201 documents, covering the period 1639-1687 is divided into three chapters: (1) warlike colonization of Yakutia, the system of strongholds, and administration; (2) form and methods of colonial exploitation: imposing and collecting of *iasak*, exploitation of natural wealth of the country; pioneering of Yakutia: merchants and traders (*promyshlenniki*), deportees, attitudes toward the native population; (3) the natives: their internal organization and forms of resistance against the colonial administration. These documents originated from the office of the governor of Yakutia in Yakutsk (1639-1707), and, termed "Yakutian acts," are now preserved at the Historical-Archeological Institute of the Academy of Sciences in Leningrad (part also in Moscow). Plates give reproductions of native writings: documents, property marks and pictographs of Yakuts, Yukaghirs, Chukchis and Lamuts, dated between 1665 and 1673 (some written on birch bark).

37837. TROUT, G. C. Otolith growth of the Barents Sea cod. (International Council for the Study of the Sea. Reports et procès-verbaux, 1953, pub. 1954. v. 136, p. 89-101, 4 illus., 12 graphs, 5 tables) 33 refs.

Importance of the otolith in the study of age and growth of many fish species is

stressed. The present study "was carried out in an attempt to obtain a more objective separation of the two main sub-populations present at Bear Island." Measurement of the annual rings of otoliths of the two types was made. Methods are described. Material used was limited to immature trawl-caught cod obtained early in 1950 by the research vessel *Ernest Holt*. "Anomalies of an apparently basic growth pattern of the otolith were observed and were found to be common to both sub-populations." Two hypotheses in explanation of the two types of early growth patterns are discussed in some detail. Comparisons are made with other cod populations.

37839. TRULEVICH, V. V. O strelkovanii redisa v arkticheskoi zone. (Agrobiologiya, July-Aug. 1954, no. 3, p. 128-31, tables) Text in Russian. **Title tr.:** On the "bolting" of the radish in the arctic zone.

According to common belief, the radish raised in low temperature, "bolts" or runs to seed prematurely and cannot be grown successfully in the far North. To check this opinion, the Institute for Polar Agriculture carried out experiments in 1953, growing several varieties of radish at the Tiksi Agricultural Experimental Station (71°35' N.). The results obtained in the field and hothouses, here summarized in tables, show that the bolting of radish in cold soil can be prevented and root development can be ensured by proper methods of culture, providing sufficient humidity and space.

Dialects of the old Russian settlers in the northern part of the Turukhansk region, Krasnoyarsk District; a preliminary communication.

An introductory sketch is given of early Russian colonization in the European far North, the settlements on the rivers Pechora, Taz and Pur, on Tazovskaya Guba and other places, according to the annals. The Turukhansk region is then dealt with, its discovery in 1607, the monastery established in 1660, and early settlers. Russian documents of 1701-1726 preserved at the Turukhansk monastery and now in the Krasnoyarsk regional archives are analyzed and their linguistic peculiarities investigated; the vocalism, morphology, and vocabulary.

37867. UDINTSEV, G. B. Kurilo-Kamchatskaja okeanicheskaja vpadina. (Geografiia v shkole, July-Aug. 1954. no. 4, p. 13-19, illus., maps) Text in Russian. *Title tr.:* The Kuril-Kamchatka oceanic deep.

General discussion of depressions as a peculiar feature of the Pacific bottom structure, is followed by description of the Kuril Trench, based on investigations of the oceanological expedition of the research vessel *Vityaz'* in 1953, headed by L. A. Zenkevich, and equipped with a self-recording, ultra-sonic depth finder. The expedition determined precisely the outlines of the depression, extending along the Kuril Islands and Kamchatka Peninsula to the vicinity of the Commander Islands, with a maximum depth, 10,382 m. (the Vityaz' Deep). The depression seems to be in close relationship with volcanic and seismic phenomena of adjacent land and sea bottom areas, including Okhotsk Sea and Kamchatka Peninsula. *Copy seen:* DLC.

37868. UDINTSEV, G. B. Novye dannye o rel'efe Kurilo-Kamchatskoi vpadiny. (Akademiia nauk SSSR. Doklady, 1954. nov. seriia, t. 94, no. 2, p. 315-18, 2 text maps) Text in Russian. English translation: *New data on the relief of the Kurile-Kamchatka depression . . .* translated by R. C. Murray, pub. in London, American Embassy, Office of the Naval Attaché, Feb. 1955 (5 p. 2 charts, mimeographed, 5 refs.) with comments by R. S. Dietz (copy in DGS).

Contains some results from a study of the bottom relief of the so-called Kuril Trench of the North Pacific, carried out from the research vessel *Vityaz'*, by the Expedition of the Institute of Oceanology of the Academy of Sciences U.S.S.R. in the summer of 1953 under direction of Prof. L. A. Zenkevich. The echo soundings were made over the region approx. 42° N. 146° E. northeast to 56° N. 166° E. Maximum depth of the depression ("Vityaz' Deep") is 10,377 m. (34,061 ft.) at 44°17.6' N. 150°30' E. The trough is concentric with ranges of the Kuril-Kamchatka chain about 180 km. (112 mi.) from shore and intersected to the north by the Aleutian Depression. V-shaped throughout its length, the trough has an average slope of 7°; the floor is a very narrow plain. Branching

channels and minor relief forms are described.

Contains a general account of the country between the mouth of the Kolyma and Olyutorskoye, and its inhabitants, based on printed sources: the discovery and conquest, expeditions, especially those of Billings and Litke, the native population (sedentary and nomadic), their economy and dwellings, family and communal life, ancient religion, trade, etc., are described. The sedentary Chukchis or Namollo, living between Kolyuchinskaya Guba and the mouth of the Anadyr, are held to be of Eskimo descent. *Copy seen*: DLC.

37876. U. S. S. R. TSENTRAL'NOE STATISTICHESKOE UPRAVLENIE.

Pokhozĭfstvennafa perepis' pripoliarnogo Severa SSSR 1926/27 goda. Territorial'nye i gruppovye itogi pokhozĭfstvennoi perepisi. Moskva, Statizdat TSSU SSSR, 1929. xii, 256 p. fold. map. Text in Russian. *Title tr.*: Households census of the sub-polar North of the U.S.S.R. in 1926/27; results of the census of households by territories and groups. Preface by B. Ī. Smulevich and P. E. Terlefskĭ in Russian, also (condensed, p. xi-xiii) in French; key (p. 253-56) to tabular matter in French.

Contains statistical data in tabular form for the following regions: Murmansk, Arkhangel'sk, Tobol'sk, Krasnoyarsk, Kirensk, Irkutsk, Bulun, Verkhoyansk, Kolymsk, Kamchatka, Nikolayevsk, and Sakhalin, indicated with (56) subdivisions on fold. schematic map. Two forms of questionnaire were used for the census: one for the survey of individual households, and another for the populated place (village, ulus) as a whole. For the individual household is noted: head of the household, his nationality and language, camping places of a nomadic household around the year, demographic description of the family, kinds and number of cattle, the reindeer herd and its status in the previous year, dogs, fowl, number of workers and their types of work and wages, agricultural equipment, hunting, fishing and transport, houses and buildings, industrial and commercial installations, income from all the branches of the economy, credit, and purchases. The territorial

survey counted the households according to *raions*, governments and territories, and the following data were taken down: mode of life (settled or nomadic), nationality (according to the head of household), knowledge of Russian and literacy, principal occupation, hired workers, and annual incomes. The total population was reported as 164,587, and number of households as 33,641; prisoners and inmates of forced labor camps are not included. Tabular breakdown of these statistics is given by territorial division (p. 2-137), and (p. 140-221): hunting, fishing, sea hunting, agriculture, and miscellaneous. In both cases, there is a separation of settled and nomadic households, and tabulation by ethnic groups and sex. The following nationalities are accounted for: Russians (44,240), Aleuts (335), Voguls (5,478), Gilyaks (1,664), Dolgans (1,058), Yeniseians (1,046), Zyryans (7,680), Kamchadals (3,837), Karelians (338), Koryaks (7,387), Lamuts (2,109), Lapps (1,682), Oroki (157), Ostyaks (12,983), Ostyak-Samoyeds (1,355), Samoyeds (13,160), Tungus (17,513), Finns (1,428), Chuvantsy (707), Chukcheis (12,252), Eskimos (1,251), Yukaghirs (454), Yuraks (2,114), Yakuts (22,448), and others (1,911). These data pre-date Sovietization and the introduction of a collective economy, after which the economic and demographic situation changed. **Copy seen:** DLC.

37879. U. S. AIR FORCE. AIR TRANSPORT COMMAND. ATLANTIC DIVISION. The Snowman project. [Washington, D.C. ?], 1947. 87 p. illus., maps, tables.

"The purpose of the project was to obtain information regarding the feasibility of operating aircraft from the Greenland Ice Cap. A camp was established 82 mi. inland from the ice edge, at 6940 ft. elevation, where snow structure, density, hardness, grain size and shape, temperature and ram resistance were investigated. A description of flight operations is presented. Ground operations included the construction of snow-block walls for wind protection and a horizontal tunnel, 15 ft. long and 7 ft. wide, for an emergency shelter. Solid ice surfaces beneath the snow cover were discovered along the western slope of the Ice Cap between 5,000-6,000 ft. elevation, with an assumed thickness of 2,000-3,000 ft., suitable for wheel landings of heavy aircraft. The construction of landing strips with metal landing mats on dry snow and by snow compaction is described. Surface study and reconnaissance results indicate that the Greenland Ice Cap is accessible by air and may be used for military and civil operation."—SIPRE. *Copy seen:* AMAU.

37880. U. S. AIR FORCE. AIR WEATHER SERVICE. Automatic weather station. (Air University quarterly review, winter 1952-53. v. 5, no. 4, p. 90-91, illus.)

Brief description with illustrations of the USAF automatic weather station on St. Matthew Island in the Bering Sea (60°22' N. 172°24' W.). The station is housed in a prefabricated hut, and consists of an anemometer, thermometer, hygrometer, four photo-electric cells to record sunlight, and a tipping bucket rain gage. All instruments are connected with automatic equipment inside the hut, which records the various readings and transmits them on two different radio frequencies every three hours to Aleutian stations. A maintenance crew visits the island annually.

37881. U. S. AIR FORCE. ALASKAN AIR COMMAND. Radar observers' Arctic manual. Fairbanks?, Aug. 1, 1948. [78] p. illus., diagrs. Photo process print, 6 refs. Compiled by Howard A. Mitchell and Nelson O. Pohl.

Interpretation of returns, radar photography and radar mosaic construction are treated in turn, stressing basic operational differences encountered in polar regions. Land-ice contrasts exemplified from the Point Barrow region, river returns, from the Canadian Arctic Islands region, ice-pack areas, scope presentation, etc. are shown. The many scope photo reproductions and terrain photos are representative of areas covered by the 72nd RCN SQDN (VLR) Photographic, during arctic flights over Northern Alaska, Beaufort Sea and the Canadian Arctic Islands initiated in 1946. Differences in land-ice contrasts, frozen and flowing rivers and characteristics which determine the identity of ice formations as to age and structure are presented. Radar navigation procedures used in the Arctic by the 72nd include the "target timing" method of plotting fixes using any available return emanating from land or ice pack surfaces, and obtaining fixes from a given target at

30-second intervals. Fixes are plotted on plotting sheet or by means of a computer, described within. Scope photography equipment used is described and camera malfunctions are discussed.

37883. U. S. AIR UNIVERSITY. Ice fog and air base location. Maxwell Air Force Base, Ala., Nov. 1949. 19 p. maps, diags., graphs, tables. (Unpublished research paper. Code no. 334) 25 refs.

"Definition, causes, characteristics and occurrence of ice fogs are discussed. The probability of ice fog increases as the temperature drops below -20°C . . . The combustion of fuel increases the probability of ice-fog formation and tends to cause it to form at a higher temperature. Sufficient sublimation nuclei must be present for ice-fog formation. Lack of frontal storms, clear weather, temperature inversions, short days and long nights, and excessive moisture favor the formation of ice fogs. Ice fog is patchy in nature, shallow in depth, influenced by orographic configuration of the surrounding terrain, and will flow toward lower elevations. It is recommended that air bases should not be located near rivers or in hollows in areas suitable for ice fog formation, but on plateaus or slopes. Proper location of the heating plant for air bases is indicated."—SIPRE.

37884. U. S. ARCTIC, DESERT, TROPIC INFORMATION CENTER. Survival training in the USAF. (Air University quarterly review, Winter 1952-53. v. 5, no. 4, p. 71-84, illus.) Prepared by the Arctic, Desert, Tropic Information Center, Air University (foreword states).

Outlines the U. S. Air Force survival course, including numerous photographs with explanatory notes. The field course covers signalling, shelter, fire-making, living off the land, use of clothing, orientation, and travel techniques. Examples from each of these subjects are described. The USAF Survival Training Program is divided into basic, advanced, and regional classes. The Alaskan Air Command includes a regional survival school. All rated personnel and everyone else in the Alaskan Air Command who might be involved in a survival situation must attend the school. Emphasis is on Alaskan problems, and a field exercise takes up most of the course. *Copy seen:* DLC.

37885. U. S. ARMY. Exercise Sweetbriar, February 1950; United States-Canada combined and joint maneuver. Chicago, 1950. 5v. (x, 121; ix, 349; xiii, 127; xv, 131; xxx, 184 p.) illus., text maps, tables.

Contains detailed report on the arctic exercise undertaken by the U. S. Army, U. S. Air Force, Canadian Army and Royal Canadian Air Force. The exercise was conducted over about 350 miles of the Alaska Highway between Whitehorse, Yukon Territory, and Northway, Alaska, Feb. 13-23, 1950. The operation developed strategic, tactical, and logistical coordination of army and air force on an international level under a combined command, and tested food, clothing, and equipment in subarctic conditions. The five volumes include (in 1) a narrative history of the operation, list of personnel in Command Group and Staffs, inclosures of directives and instructions; (2) detailed discussion and recommendations on the maneuver objectives; (3) report of the Canadian Army; (4) report of the Allied Air Force; (5) Chief Empire report, public information report, and pictorial review.

37888. U. S. ARMY AIR FORCES SCHOOL OF APPLIED TACTICS, Eglin Field, Fla. Living off the land; prepared for Army Air Forces, School of

Applied Tactics, in collaboration with the Arctic, Desert and Tropic Information Center. Eglin Field [1944?] 79 p. illus.

Includes as part 2 (p. 43-79) "Living off the Arctic," a presentation of suggestions and hints for flight preparation, signalling, travel, clothing, shelter, and food. Available seafoods, birds, animals and plant life are described and illustrated.

Copy seen: DLC.

37889. U. S. ARMY MAP SERVICE. Alaska and Canada Arctic regions map catalog. Washington, D. C., [1954]. 125 p. 61 maps (part fold.) 10½ x 16 in.

Contains index maps to active map series maintained by the Army Map Service. Indexes for nautical and aeronautical charts are not included. Each index shows quadrangles available, series number and name, scale, sheet number and/or name, key number (when available). Among others, the following series of specific interest in arctic studies, are represented: *World*, including maps of arctic regions, scales 1:11,000,000; 1:19-000,000; world outline maps at 1:5,000,000; 1:10,000,000; 1:20,000,000; *the Americas*, including Alaska, northern Canada and Greenland, scale 1:5,000,000; *U.S.S.R.* scale 1:4,000,000; *Greenland*, scales 1:4-000,000; 1:500,000; 1:50,000; *Northeast Greenland*, scale 1:250,000; *Jan Mayen*, scale 1:100,000; *Spitsbergen*, scale 1:823-000; *Alaska road map*, scale 1:1,500,000; *Alaska*, scales 1:250,000; 1:50,000; 1:25,000; also plastic relief maps at 1:250,000 and 1:50,000; *Aleutian Islands*, scales 1:62,500; 1:25,000; 1:20,000 *Canada* (air) including arctic regions, scale 1:506,880; *eastern Canada* including northern Quebec, Ontario, and Manitoba, scale 1:253,440; *western Canada* listed in table of contents, scale 1:253,440, but not available for catalog at time of issue.

U. S. ARMY MEDICAL RESEARCH LABORATORY, *see* Reaser, P. B. Cooling gradient calorimetry, 3. 1963. No. 37004.

37890. U. S. BOARD ON GEOGRAPHIC NAMES. Decision on names in the Union of Soviet Socialist Republics. Washington, D. C., Apr. 1951. 62 p. (*Its*: Cumulative decision list no. 5103).

Contains an alphabetic listing of 824 approved names with identification of the geographic feature concerned, and unapproved variant names and spellings

indicated. An accompanying two-page supplement containing corrections and additions (five new names) to May 1953. Many features in the North are included.

Copy seen: DLC.

37891. U. S. BOARD ON GEOGRAPHIC NAMES. Decisions on names in the United States, Alaska and Puerto Rico. Decisions rendered from July 1950 to May 1954. Washington, D. C., Dept. of the Interior, May 1954. 115 p. (*Its*: Decision list, no. 5401).

Includes 165 approved names for Alaska, with identification of the geographic feature concerned and unapproved variant names and spellings indicated. Alphabetical index is included.

Copy seen: DLC.

U. S. BUREAU OF DOCKS, *see* Rockefeller, S. Arctic research: problems . . . 1954. No. 37103.

37892. U. S. BUREAU OF LAND MANAGEMENT. Agricultural settlement opportunities in Alaska: Anchorage area. Washington, D. C., 1947. 27 p. 2 fold. maps, table. Mimeographed.

Contains information on physiography, climate, vegetation, soils, and natural resources. The history of settlement, population, and the city of Anchorage, transportation and communications are outlined. Present farming, land suitability and availability, farm production and markets are discussed. *Appendices* give mileages between Anchorage and principal Alaskan towns and cities, freight and passenger rates from Seattle to Anchorage.

Copy seen: DI.

37893. U. S. BUREAU OF LAND MANAGEMENT. Areas suitable for group agricultural settlement in Alaska. Washington, D. C., Feb. 1947. 5 p. text map. Mimeographed.

Suitability of specific areas for group agricultural settlement depends not only on physical resources but on economic and social factors. Four major criteria for such settlement are set up: climate; accessibility; character of the land; and contiguous areal extent of suitable land. On this basis, the possibilities of nine areas in central, southern, and southeastern Alaska are estimated in terms of farm families. Total estimate is 640 new families.

37894. U. S. BUREAU OF SHIPS. JOURNAL. Ships against ice. (U. S. Bureau of Ships. Journal, Aug. 1954.

v. 3, no. 4, Navships 250-200, p. 2-6, illus.)

The Bureau of Ships' cognizance of the Navy's arctic program is described. Ice-breaker operations including convoy work are briefly discussed. The U. S. Navy presently possesses four ice-breakers, each 269 ft. long, with a displacement of 5500 tons and six diesel engines driving two 5000 hwp. motors. U. S. S. *Glacier*, prototype for future U. S. Navy icebreaker construction was readied for launching in Aug. 1954. Equipment maintenance aboard ship is described with a few typical examples given: an "ice-phobic" paint to retard ice formation on topside surfaces; ice-breaker pilot houses equipped with electrically heated non-icing windows; a new method of unloading fuel oil, antenna rotating mechanisms and heater elements for antenna pedestals. Extensive studies have been made aimed at adapting carriers and submarines for arctic use. Illus. of U. S. S. *Atka* (front cover) and U. S. S. *Burton Island*.

37897. U. S. COAST AND GEODETIC SURVEY. Magnetograms and hourly values, Sitka, Alaska, 1950[-1952]. Washington, D. C., 1953-in progress. 3 v. graphs, tables. (Its: MHV-Si50, MHV-Si51, MHV-Si52) 7 refs. Formerly published as: Magnetograms, Sitka, Alaska, Jan./June 1946-July/Dec. 1949. 4 v. in 8 (Its: MG-S46.1-MG-S49.2) United with: Magnetic hourly values, Sitka, Alaska, 1948-1949. 2 v. (Its: HV-Si48, HV-Si49)

Series of annual reports presenting records of the Sitka Magnetic Observatory, Southeast Alaska (57°03.5' N. 135°19.5' W.) "in the form of quarter-size reproductions of the magnetograms and tables of hourly mean values of each of the magnetic elements—declination, horizontal intensity, and vertical intensity." Sitka Observatory is one of seven operated by the Coast and Geodetic Survey in the U. S. and possessions, two others being at Barrow and College, Alaska. **File seen:** DGS (1946-1952).

37898. U. S. COAST AND GEODETIC SURVEY. Surface water temperatures at tide stations, Atlantic Coast, North and South America. Washington, 1951. 57 p. charts, tables. (Its: Special publication, no. 278, rev. ed.)

Contains "extensive tables and charts of data on monthly and annual mean temperature of surface water (bucket measurements) for each year of record and averages for entire period of record, and extremes each year and for each month. The 82 stations range from Ivigtut, Greenland, to Panama and southern Brazil. . . ."—*Meteorological abstracts and bibliography*, Apr. 1954. v. 5, no. 4, p. 472. **Copy seen:** DWB.

37899. U. S. COAST AND GEODETIC SURVEY. United States coast pilot, Southeast Alaska, formerly Alaska, pt. 1, Dixon Entrance to Yakutat Bay. 10th (1952) ed. Washington, D. C., U. S. Govt. Print. Off., 1952. v. 543 p. illus. (part col.) 8 charts (part col.) tables, 4 text maps. (Its: Serial no. 760.) *Supplement* with additions and corrections to Jan. 1, 1954.

Revised edition of *Arctic Bibliography*, No. 18302, based on examinations by the U. S. Coast and Geodetic Survey and results of special field inspectors in 1951. General information and sailing directions are similar in scope to previous edition. The extensive index (p. 517-32) is a useful guide to coastal features.

Copy seen: DLC; DN-HO.

37900. U. S. COAST GUARD. International ice observation and ice patrol service in the North Atlantic Ocean, season of 1951. Washington, D. C., U. S. Govt. Print. Off., 1952. 85 p. charts (6 fold.), graphs, tables. (*Its:* Bulletin no. 37). In continuation of reports for 1913-1950 (*Arctic Bibliography*, No. 18305, 26899, 26900, 26901).

Contains section by S. Pisicchio (p. 1-16) reporting on the 1951 season (Feb. 14-May 24), one of shortest on record. Four cruises by the oceanographic vessel *Evergreen* (the two ice patrol vessels were not needed) and 27 ice observation flights by two aircraft were made. Communications, monthly ice conditions, and weather are discussed. Charts showing ice conditions and surface isotherms, Feb. 1-May 13, and detailed chronological tables of ice reports are given. Only 139 bergs were sighted on flights as far north as 60° N.; none drifted south of 46° N.

The second section, *Physical oceanography of the Grand Banks region and the Labrador Sea in 1951*, by F. M. Soule, P. S. Branson, and R. P. Dinsmore (p. 17-85) deals with oceanographic investigations from the *Evergreen*, Apr. 2-Aug. 1, during which 307 stations were occupied, 24 of them a section across the Labrador Sea. Discussion includes: circulation in the Grand Banks and southern Labrador Sea; comparison of temperature-salinity relationships in the Grand Banks region with conditions in other years; relationship between the northern boundary of the North Atlantic Current and the strength of the Labrador Current; volume transport, mean temperature, and salinity distribution within the Labrador and West Greenland Currents in the section from South Wolf Island, Labrador, to Cape Farewell, Greenland; thermal characteristics of this section (increase in temperature of the intermediate water of the Labrador Sea in 1951 over 1950 is noted); continuing deficiency of the Irminger Current in 1951. Tables of oceanographic data (depth, temperature, and salinity) collected at each station are given (p. 54-85). This section is also

pub. as: Woods Hole, Mass. Oceanographic Institution. Contribution, no. 601.

Copy seen: CaMAI; DN-HO.

37901. U. S. COAST GUARD. International ice observation and ice patrol service in the North Atlantic Ocean, season of 1952. Washington, D. C., U. S. Govt. Print. Off., 1952. 100 p. charts (6 fold.), graphs, tables. (*Its:* Bulletin, no. 38).

Contains section by P. S. Branson (p. 1-30) reporting on the 1952 season (Feb. 13-June 16). Three cruises by the oceanographic vessel *Evergreen* (the two ice patrol vessels were not needed) and 39 ice observation flights by two aircraft were made. Communications and monthly ice conditions are discussed. Charts showing ice conditions and surface isotherms, Feb. 1-June 15, and detailed chronological tables of ice reports are given. During 1952 only 14 bergs were estimated to have drifted south of 48° N., none past 47° N.

The second section, *Physical oceanography of the Grand Banks region and the Labrador Sea in 1952*, by F. M. Soule (p. 31-100), deals with oceanographic investigations from the *Evergreen*, Mar. 31-July 27, during which 381 stations were occupied, 24 of them a section across the Labrador Sea. In addition to the usual temperature and salinity measurements, 984 samples were taken for determination of total phosphorus concentration. Discussion includes: circulation in the Grand Banks and southern Labrador Sea; major recurvature of the Labrador Current northward, north of lat. of Flemish Cap; deficiency of the Labrador Current in 1952; comparison of temperature-salinity relationships in the Grand Banks region with conditions in other years; relationship between the northern boundary of the North Atlantic Current and the strength of the Labrador Current; volume transport, mean temperature, and salinity distribution within the Labrador and West Greenland Currents in the section from South Wolf Island, Labrador, to Cape Farewell, Greenland; and continuing deficiency of the Irminger Current in 1952. Data on phosphorus will be published in the next year's report. Tables of oceanographic data (depth, temperature, and salinity) collected at each station are given (p. 55-100). This section is also published as: Woods Hole, Mass. Oceanographic Institution. Contribution, no. 637.

37902. U. S. COAST GUARD. Local list of lights and other marine aids, Pacific Coast of the United States. Alaska, Seventeenth Coast Guard District Vol. IV, corrected to Jan. 1, 1954. Washington, D. C., U. S. Govt. Print. Off., 1954. xv, p. 197-264. 2 maps (1 fold.), diagrs. (*Its*: CG-162)

Lights are listed for southeastern Alaska waters (including inner sounds, inlets, etc.): Gulf of Alaska, Aleutian waters, Bristol Bay, Bering Sea, and Norton Sound. For each light, information includes: (1) character and period of light; (2) lat. and long.; (3) light or day-beacon above water (ft.); (4) candlepower and miles seen; (5) type of structure and when built; (6) radiobeacon, fog signal, sectors, and remarks on maintenance, etc. Alphabetical index of lights is appended. **Copy seen:** DLC.

37903. U. S. DEPT. OF DEFENSE. Northeast to the Arctic. Washington, D. C., U. S. Govt. Print. Off., Aug. 1954. 84 p. illus., 3 text maps. (U. S. Army, Pamphlet no. 20-188; U. S. Air Force, Pamphlet no. 34-3-3)

Contains pocket handbook for U. S. Armed Forces personnel assigned to bases in Iceland, Greenland, Newfoundland and Labrador in the U. S. Northeast Command. Includes brief popular description of the climate, other geographical features, people, government, and history of Greenland, and the recreational facilities available at Narsarsuak, Søndrestrøm, and Thule bases.

Copy seen: DLC.

37904. U. S. DEPT. OF DEFENSE. ARMED FORCES INFORMATION AND EDUCATION DIVISION. A pocket guide to Alaska. Washington, D. C., U. S. Govt. Print. Off., 1954. 68 p. illus., text maps. (*Its*: PG-4, superseded March 1951 edition)

Contains information for U. S. Armed Forces personnel stationed in Alaska. Subjects briefly discussed include: geography, history, transportation, people, cities and towns, government, strategic importance, U. S. Armed Forces and military installations, recreation, winter survival. Regional descriptions are given of: the Southeast; Pacific Coast; Interior; western approaches; the Southwest-Alaska Peninsula and Aleutians; Arctic. Appended is list of Alaskan expressions.

37905. U. S. DEPT. OF THE INTERIOR. ALASKA FIELD COMMITTEE. A six year integrated program, Department of the Interior in Alaska, 1952-1957. Washington, Jan. 2, 1951; revised May 1, 1951. 101 p. tables (4 fold.) Mimeographed.

Contains report prepared by a committee of Federal and Territorial government officials, Kenneth J. Kadow, chairman; and approved as "a basic guide for the activities of the Department and its Bureaus and Offices in Alaska." Objectives of the program, economic conditions and development problems are outlined. Detailed discussion follows on land, sea, and air transportation; development and conservation of resources, including tourism and recreation; financial requirements from civilian and military government and private capital; housing; public works; education; health; native program. Estimated budget requirements for each office and bureau, and for authorized and unauthorized projects of the Alaska Road Commission (listed) for each year 1952-1957 are tabulated.

37906. U. S. DEPT. OF THE INTERIOR. OFFICE OF TERRITORIES. Alaska. Information on the Territory of Alaska for the fiscal year ending June 30, 1952, transmitted by the United States to the Secretary General of the United Nations pursuant to article 73 (e) of the Charter. Juneau, 1952. 45 p. tables.

In four parts: (1) *General information* on population and government; (2) *Economic conditions*, dealing with agriculture and livestock, forestry, fisheries, mining, power, industry, transport and com-

munications, public finance, banking and credit, international trade; (3) *Social conditions*: status of women, labor and employment conditions, town and rural planning and housing, social security and welfare, Federal Security Agency, Social Security Administration, Alaska Native Service, Alaska Dept. of Public Welfare, Employment Security Commission, vocational rehabilitation, public health; (4) *Educational conditions*: administration and structure of the educational system, adult education, school buildings, statistics, youth organizations, cultural institutions, protection of nature, mass communications. Government, agriculture, fisheries, labor and employment, planning and housing, and public health are treated in considerable detail with tables of statistics. **Copy seen:** DI; DLC.

37907. U. S. DEPT. OF THE INTERIOR. OFFICE OF TERRITORIES. General information Alaska. Washington, D. C., June 1954. 8 p. illus., text map. Mimeographed.

Contains very brief information on history, government, climate, population, living conditions, Eskimos, Indians, Aleuts, length of day, employment, Alaska Railroad, Alaska Highway, acquisition of land, agriculture, commerce, timber, transportation, etc.

Copy seen: DI; CaMAI.

37908. U. S. DEPT. OF THE INTERIOR. OFFICE OF TERRITORIES. Information on the Territory of Alaska for the fiscal year ending June 30, 1953, to be transmitted to the United Nations under article 73 (e) of the charter. Washington, D. C., 1954. 19 p. tables. Mimeographed.

Contains summary of advancements in the economic, social, and educational fields and of activities of the 21st Territorial Legislature Jan. 26-Mar. 26, 1953. Statistical information is given (mainly as addenda to the 1951/52 report) on: government and private construction; fisheries; mineral production; industry, including native arts and crafts; transport and communications; public finance; financial conditions of the Territory's banks; legislation in labor and employment; cost of living; social security and welfare; crime prevention; public health (in some detail); and educational conditions. This yearly report to the United Nations was initiated in 1947 (*Arctic Bibliography*, No. 26944), and pub. each year subsequently.

37911. U. S. FISH AND WILDLIFE SERVICE. Alaska fishery and fur-seal industries, 1948[-1952]. Washington, D. C., U. S. Govt. Print. Off., 1952-1954. 5 nos. illus., text map, tables. (*Its*: Statistical digest, no. 23, 26, 29, 31, 33)

Annual report prepared by S. H. Thompson, in continuation of, and similar in scope to those of 1911-1947 (*Arctic Bibliography*, No. 18278, 26948).

Copy seen: CaMAI; DI.

37912. U. S. FISH AND WILDLIFE SERVICE. Laws and regulations for protection of the commercial fisheries of Alaska. Washington D. C., U. S. Govt. Print. Off., Mar. 1954. 59 p. (*Its*: Regulatory announcement 42)

Contains (1) general regulations with texts of relevant statutes and (2) the detailed regulations effective Mar. 22, 1954 for various localities of western, southern and southeastern Alaska. Salmon, herring, shellfish and personal use fisheries are regulated as to: districts

open, open seasons, fish quotas; restrictions on: gear size and marking of nets, boats; reports of operators, etc.

Copy seen: DLC.

37913. U. S. FISH AND WILDLIFE SERVICE. Waterfowl population and breeding conditions, summer 1953. Washington, D. C., Apr. 1954. 250 p. text maps, diagrs., graphs, tables. (*Its* Special scientific report: Wildlife no. 25)

Issued jointly with the Canadian Wildlife Service (Dept. of Northern Affairs and National Resources), this is the seventh in a series begun in 1947 to record annual breeding ground conditions for migratory waterfowl in Alaska, Canada, and northern United States. *Contains* 40 reports, of which the following deal with the North and appear in this Bibliography under the author's name.

NELSON, U. C. Waterfowl breeding ground survey, 1953 in Alaska. p. 1-6.

37914. U. S. FISH AND WILDLIFE SERVICE. ALASKA FISHERIES BRANCH. Alaska fisheries, 1953. Washington, D. C., 1954. 5 p. graphs, tables. (C. F. S. no. 993, annual summary)

The commercial catch of fishery products in Alaska during 1953 totaled 296,966,462 lbs. valued at \$26,466,835, a decrease of 21 percent in quantity and 29 percent in value compared with 1952. Tabular summaries for Southeast, Central and West Alaska are given of: quantity and value of catch; persons employed and type of fishing gear used; species of fish and shellfish caught; transporting, wholesaling and marketing; production as prepared for market; production of canned products and of by-products; and number of salmon caught. Quantity and value of the catch yearly from 1934 through 1953 are also summarized.

37915. U. S. FOREST SERVICE. Report to the Federal Power Commission

on the water powers of southeastern Alaska. [By] Joseph Cummings Dort. Washington, D. C., U. S. Govt. Print. Off., 1924. ix, 172 p. incl. 22 plates (diagrs., graphs, 7 maps), 77 tables

This report presents the results of a special water power reconnaissance by the author, hydroelectrical engineer for the U. S. Forest Service, in 1921 and exploration in 1922; it deals with the better known water power sites in the area. Discusses the following as conditions affecting water power developments in Southeast Alaska—geography, topography, geology, climate, stream flow, evaporation, fisheries, water rights, also water power rights and sales of pulp timber in the Tongass National Forest. Describes in detail, by districts and projects, first, the undeveloped water power projects, and, second, the developed water powers. The authority for the survey of each of these power sites is indicated in the text. The climate of Southeast Alaska is described in an appendix (p. 145-72) by M. B. Summers: general conditions, (including its relationship to the North Pacific or Aleutian low pressure area of fall and winter) and the precipitation, temperature, sunshine, and winds.

Copy seen: DLC.

37916. U. S. FOREST SERVICE. Tongass National Forest, Alaska. Washington, D. C., U. S. Govt. Print. Off., 1940. 46 p. 20 illus. 5 maps. (incl. 1 fold.)

Contains survey for prospective tourists of the 16 million acres in Southeast Alaska under planned management as Tongass National Forest. Includes brief descriptions of: climate; timber resources and water power; recreation opportunities; wildlife; industries (commercial fishing, fur farming, mining); Indians; towns and highways, glaciers; plants and shrubs; and transportation.

Copy seen: DLC.

37917. U. S. GEOLOGICAL SURVEY. Mineral resources of Alaska, report on progress of investigations in 1904 [etc.] by A. H. Brooks [and others]. Washington, D. C., U. S. Govt. Print. Off., 1905- in progress.

Published for each year 1904-1940, and biennially 1941-1946, as a *Bulletin* of the U. S. Geological Survey, ranging in size from two to four hundred pages or more. It comprises an administrative report and a review of the mining industry, usually by the chief Alaskan geolo-

gist (A. H. Brooks, P. S. Smith, q. v.), a list of recent Survey publications on Alaska, together with several papers by Survey geologists reporting results of recent field work. In these papers chiefly economic aspects of the work are presented. Geological results are frequently, but not always, presented in another, later, longer paper published as a separate *Survey Bulletin*. Most of the *Mineral resources* papers are listed under their authors' names in the present volume (6, a few in v. 1-2) of *Arctic Bibliography* with summary of their content, also reference to the later bulletin, if any. Since 1944, when the responsibility of recording Alaska mining production was transferred to the U. S. Bureau of Mines, the Survey's *Mineral resources of Alaska* lacks the statistical data on mineral production, the former administration reports, and summaries of mining developments; it consists of short reports on the geology of various districts.

37918. U. S. HYDROGRAPHIC OFFICE. Aerial ice reconnaissance; observational techniques and recording and reporting procedures. Washington, D. C., 1952; reprinted 1953. 14 p. Mimeographed. (*Its*: H. O. Misc. no. 15603).

General observational procedures are outlined. Investigation of sea ice from aircraft can provide information on: concentration, topography and relief, age, puddling, location of cracks, leads, polynyas, and areas of easiest accessibility. Recording of each is briefly discussed. Preparation of ice track charts, entering of symbols, and content of ice messages resulting from reconnaissance

are considered. Sample ice message is given, and symbols listed.

Copy seen: DN-HO.

37919. U. S. HYDROGRAPHIC OFFICE. Arctic azimuth tables for parallels of latitude between 70° and 88°. Prepared by Lt. Seaton Schroeder, U.S.N., and Lt. Richard Wainwright, U.S.N. Washington, U. S. Govt. Print. Off., 1881, reproduced by lithography, Hydrographic Off., 1924. 45 p. incl. tables. (*Its*: [Pub.] no. 66)

Contains tables of azimuths prepared for the use of the U.S.S. *Rodgers* in her search for the De Long expedition on the steamer *Jeannette*. Azimuths are given at intervals of 10 minutes from 5 a. m. to 8 a. m. and 4 p. m. to 7 p. m. The tables are applicable in both northern and southern hemispheres for bodies whose declination is of the same name as the latitude.

37920. U. S. HYDROGRAPHIC OFFICE. Arctic ice and its drift into the North Atlantic Ocean. 12th ed. Washington, D. C., May 1953. fold. sheet. charts.

This Supplement to the Pilot Chart of the North Atlantic Ocean contains brief discussion of "formation of the International Ice Patrol, managed by the U. S. and . . . formation and course of the West Greenland and Labrador currents and the Gulf Stream. Defines different types of field ice—storis, west ice and winter ice—and berg ice, and reviews at length the seasonal distribution of these types of ice in East Greenland, West Greenland, Southwest Greenland, Frobisher Bay, Hudson Strait, Hudson Bay, Labrador, Newfoundland, Gulf of St. Lawrence and Grand Banks. Visual and instrumental methods for detecting field and berg ice are included [and] . . . suggestions . . . for any ship that must sail into the ice are listed. Charts show distribution of different types of ice, principal iceberg glaciers which discharge into Baffin Bay, drift of icebergs from their source into Baffin Bay and drift tracks of icebergs, 1900-1940." —*Metecological abstracts & bibliography*, Sept. 1954. v. 5, no. 9, p. 1109.

37921. U. S. HYDROGRAPHIC OFFICE. Ice observations. Washington, D. C., 1954. 20 p. illus., 2 text maps, diagrs. (*Its*: H. O. Pub. no. 606-d. Hydrographic Office observers manual) 5 refs.

Observation procedures and methods of recording and reporting are outlined and generously illustrated, as an aid to shipboard, aircraft and shore observers. Sea ice, its movements, and origin are described. Characteristics to be reported include concentration, relief and topography, age, snow cover, puddling, water features, fast ice, thickness, size of ice of land origin. Observation techniques and reporting procedures for ship, aircraft and shore stations are also given.

37922. U. S. HYDROGRAPHIC OFFICE. List of lights and fog signals, vol. I. The coasts of North and South America, the West Indies, and the Hawaiian Islands, excluding continental U. S. A. and Alaska. Corrected to July 1, 1953. Washington, D. C., U. S. Govt. Print. Off., 1953. 671 p. text map. (*Its:* H. O. Pub. no. 30, 1953). Supplement: corrections to Jan. 30, 1954.

Revision of *Arctic Bibliography*, No. 26953. This list is normally revised and issued every year corrected to Jan. 1. Includes coasts of West Greenland, Hudson Bay and Strait, Labrador, and Aleutian Islands.

Copy seen: DN-HO.

37923. U. S. HYDROGRAPHIC OFFICE. List of lights and fog signals, vol. V. Norway, Iceland, and Arctic Ocean. Corrected to October 1, 1954. Washington, D.C., U.S. Govt. Print. Off., 1954. 534 p. text map. (*Its:* H. O. Pub. no. 34, 1954)

Contains revision of *Arctic Bibliography*, No. 26954. This publication is now normally revised and reissued every other year corrected to Sept. 1. Gives number, name and location, geographic position, characteristic and power, height above high water, visibility in nautical miles, types and height of structure, and remarks for the coasts of Norway, U.S.S.R., and West Spitsbergen.

Copy seen: DN-HO.

37924. U. S. HYDROGRAPHIC OFFICE. Sailing directions for Baffin Bay and Davis Strait, comprising the west coast of Greenland from the eastern entrance of Prince Christian Sound to Cape Morris Jesup and the east coasts of Baffin, Bylot, Devon, and Ellesmere Islands from Resolution Island to Cape Joseph Henry. 2nd ed., 1951. Washington, D.C., U.S. Govt. Print. Off., 1952. xxvi, 462 p. (loose leaf), illus. fold. map.

(*Its:* H. O. Pub. no. 76, 1951) *Supplement* with corrections and additions to Apr. 10, 1954. 16 p. Special supplement for the Padloping Island area, prepared for Summer 1953 Operation. 8 p.

Consolidation of previous edition, 1947 (*Arctic Bibliography*, No. 18369) and selected supplementary data. Glossaries of Danish geographical terms and Eskimo words now follow the Appendix. Otherwise scope and arrangement are similar to previous edition.

Copy seen: DN-HO.

37925. U. S. HYDROGRAPHIC OFFICE. Sailing directions for British Columbia, volume II. The coast of British Columbia from Cape Caution to Portland Inlet, including the Queen Charlotte Islands and Dixon Entrance. 5th ed., 1952. Washington, D.C., U.S. Govt. Print. Off., 1952. xii, 262 p. fold. chart, tables (*Its:* H. O. Pub. no. 176) also *Supplement* with corrections and additions to Aug. 7, 1954.

Contains general information on buoyage, pilots, signals, quarantine, winds and weather, tides, currents, inner passages, ocean routes. Sailing directions include Dixon Entrance between the Queen Charlotte Islands (B. C.) on the south and Prince of Wales and Dall Islands (Southeast Alaska) to the north (p. 222-26) in the approx. region $54^{\circ}30' - 55^{\circ}20' N. 129^{\circ}30' - 133^{\circ}30' W.$

Copy seen: DN-HO; DLC.

37926. U. S. HYDROGRAPHIC OFFICE. Sailing Directions for East Greenland and Iceland, second edition, 1951; change no. 1, 8/29/53. Washington, D. C., U. S. Govt. Print. Off., 1953. loose-leaf. (*Its:* H. O. Pub. no. 75, change no. 1)

Contains extensive corrections and additions to *Arctic Bibliography*, No. 26955. Corrections are through Aug. 29, 1953, including *Notice to mariners* no. 35, 1953.

Copy seen: DLC.

37927. U. S. HYDROGRAPHIC OFFICE. Sailing directions for northern U.S.S.R. Volume I, Mys Nemetskiy to Mys Kanin Nos. 1st ed., 1953. Washington, D. C., U. S. Govt. Print. Off., 1954. xxviii, 406 p. (loose leaf), illus., charts (1 fold.), tables. (*Its:* H. O. Pub. no. 137A)

Contains general information on the approx. region $64^{\circ} - 70^{\circ} N. 30^{\circ} - 43^{\circ} E.$ in Barents and White Seas; Northern Sea Route; buoyage, signals, pilotage, regu-

lations, cautions, tides and currents. Extensive information is given on ice (p. 48-116): formation, growth, etc., warming of the Arctic, ice conditions (with maps showing monthly conditions, tables of mean dates of freezing and opening), ice terminology, ice navigation (including discussion of handling vessels in ice, towing, ice-breaker techniques, preparation of vessels for ice). Climate and weather are outlined (p. 116-48) with brief notes on oceanography and maps of sea surface temperature and salinity.

The sailing directions cover (chap. 2): Murmanskii Bereg from Mys Nemetskiy to Mys Svyatoy Nos.

3. Beloye More: the entrance, Mezenskaya Guba, and Gorlo Belogo Morya.

4. Beloye More: Dvinskaya Guba.

5. Beloye More: Onezhskaya Guba and northwestern approach.

6. Beloye More: Western and northern shores of the Basin and Kandalakshskaya Guba.

Appendix: Climatological tables; glossary of English-Russian terms; conversion tables.

Copy seen: DN-HO.

37928. U. S. HYDROGRAPHIC OFFICE. Sailing directions for the east coast of Siberia, second edition, 1951; change no. 1. Washington, D. C., U. S. Govt. Print. Off., 1953. loose-leaf. (Its: H. O. Pub. no. 122A, change no. 1)

Contains corrections and additions to *Arctic Bibliography*, No. 26957. Corrections are through Oct. 3, 1953, including *Notice to mariners* no. 40, 1953.

Copy seen: DLC.

37929. U. S. HYDROGRAPHIC OFFICE. Sailing directions for the northern U.S.S.R. Volume II, Mys Kanin Nos to Ostrov Dikson. 1st. ed., 1954. Washington, D. C., U. S. Govt. Print. Off. 1954. xxviii, 408 p. (loose leaf) illus., charts (1 fold.), tables. (Its: H. O. Pub., no. 137B)

Contains general information on the approx. region 70°-82° N. 43°-80° E. in Barents and western Kara Seas (including Novaya Zemlya and Zemlya Frantsa-Iosifa); Northern Sea Route; buoyage, signals; pilotage, regulations; tides and currents. Extensive information is given on ice and ice navigation (p. 36-104) similar to that in No. 37927 with application to this region; climate and weather (p. 104-127); oceanography (with maps) of sea surface temperature and salinity.

The sailing directions cover (chap. 2): Southeastern shore of Barents Sea: Mys Kanin Nos to Proliv Yugorskiy Shar.

3. Proliv Yugorskiy Shar—Ostrov Vaygach—Proliv Karskiye Vorota.

4. South and west coasts of Novaya Zemlya—Proliv Matochkin Shar.

5. East coast of Novaya Zemlya.

6. Zemlya Frantsa-Iosifa.

7. Southern shore of the Kara Sea—west coast of Poluoostrov Yamal—west and north coasts of Ostrov Belyy.

8. Obskaya Guba and Reka Ob'.

9. Gydanskaya Guba—Yeniseyskiy Zaliv and Reka Yenisey.

Appendix: Climatological tables; glossary of English-Russian terms; conversion tables.

Copy seen: DN-HO.

37930. U. S. HYDROGRAPHIC OFFICE. Sailing directions for the northern U.S.S.R. Volume III, Ostrov Dikson to Mys Shmidt. 1st ed., 1954. Washington, D. C., U. S. Govt. Print. Off., 1954. xiv, 346 p. (loose leaf) illus., charts (1 fold.), tables. (Its: H. O. Pub., No. 137C)

Contains general information on the approx. region 70°-82° N. 80°-180° E. in the eastern Kara, Laptev, and East Siberian Seas; Northern Sea Route; buoyage, signals, pilotage, regulations, cautions, tides and currents. Extensive information is given on ice and ice navigation (p. 34-89) similar to that in the two preceding items with application to this region; its climate and weather are outlined (p. 89-98) also its oceanography, with maps of sea surface temperature and salinity.

The sailing directions cover (Chap. 2) Northeastern shore of Kara Sea—Ostrov Dikson to Proliv Borisa Vil'kitskogo.

3. Proliv Borisa Vil'kitskogo and Severnaya Zemlya.

4. Western and southern shores of Laptev Sea—Proliv Borisa Vil'kitskogo to Proliv Dmitriya Lapteva.

5. Novosibirskiye Ostrova and Proliv Dmitriya Lapteva.

6. Southern shore of East Siberian sea—Proliv Dmitriya Lapteva to Mys Shmidt.

Appendix: Climatological tables; glossary of English-Russian terms.

Copy seen: DN-HO.

37931. U. S. HYDROGRAPHIC OFFICE. Sailing directions for the northwest and north coasts of Norway. Fedjeosen to the U.S.S.R. frontier and thence to Nyemyetski Point, including

Svalbard Archipelago. 4th ed., 1952. Washington, D. C., U. S. Govt. Print. Off., 1953. xxvi, 416 p. (loose leaf), illus., text maps, fold. map, tables. (*Its*: H. O. Pub. no. 136, 1952). *Supplement* with corrections and additions to June 12, 1954.

Corrected edition of *Arctic Bibliography*, No. 18373. This edition includes description of the Petsamo (Pechenga) District between the Norwegian frontier and Nemetskiy Point, U.S.S.R. Jan Mayen, covered in previous editions, has been omitted and is now covered solely by H. O. Pub. no. 75 (*Sailing directions for East Greenland*, q. v.). Otherwise scope is similar to that of former editions.

Sailing directions: chap. 1-5. North-east approach of Bergen to Bodø.

6. Saltfjord to Norvik.

7. Vestfjord to Tromsø.

8. Malangen to Hammerfest.

9. Sørøysund to Varangerfjord—Petsamo District (U.S.S.R.).

10. Svalbard Archipelago.

Copy seen: DN-HO.

37932. U. S. HYDROGRAPHIC OFFICE. Star tables for air navigation, computed altitude and true azimuth for all latitudes. Prelim. ed. Washington, U. S. Govt. Print. Off., 1947. viii, 322 p. tables. (*Its*: H. O. Pub. no. 249)

Contains computed altitude values corrected for refraction at a flight level of 5,000 ft. above sea level, and true azimuth. No interpolation is required. One volume contains all integral degrees of latitude from the North to the South Pole. The entering argument is the LHA of Aries for any assumed latitude. Six selected stars are listed horizontally, arranged in ascending order of azimuth, and their computed altitudes and true azimuths are given for each tabulated degree of LHA. Seven supplementary tables containing various corrections and conversions are included to provide the navigator with all data required in the working of star sights. The tables, planned for use with the *Air almanac*, "were conceived and designed by Commander C. H. Hutchings, U. S. Navy."

Copy seen: DLC.

37933. U. S. HYDROGRAPHIC OFFICE. Summary of Notices to mariners affecting H. O. Pub. 77. 2nd ed., 1951. (Notices to mariners 40 of 1951 thru N. M. 17, 1954 inclusive). Washington, D. C., 1954.

Contains supplementary data, corrections and additions to *Sailing directions for northern Canada* (*Arctic Bibliography*, No. 26956) from Oct. 13, 1951 to Apr. 24, 1954.

Copy seen: DN-HO.

37934. U. S. HYDROGRAPHIC OFFICE. Tables of computed altitude and azimuth, latitudes 80° to 89° inclusive. v. 9. Washington, U. S. Govt. Print. Off., 1946. xxiv, 261 p. (*Its*: H. O. Pub. no. 214, v. 9) vols. 1-8 of H. O. Pub. no. 214, issued 1936-41 (v. 7: 60°-69° reprinted in 1952) are tables for 0° to 79° inclusive.

Contains tables of computed altitude and azimuth equally applicable to sights of the sun, moon, planets and navigational stars. The arrangement is on a basis of whole degrees of latitude. Declination arguments in whole and half degrees head the main columns of each page, while hour angle arguments in whole degrees appear at the sides. Within the limits of each declination column are four groups of figures representing the altitude, the multiplier for declination difference, the multiplier for hour angle difference, and the azimuth. The introduction to v. 9 discusses use of the Pole as an assumed position, describes various map projections used in the polar regions, and gives a brief description of grid navigation.

37935. U. S. HYDROGRAPHIC OFFICE. World atlas of sea surface temperatures. 2nd ed. 1944. Washington, D. C., U. S. Hydrographic Office, 1954 (reprint). 49 p. 48 charts. (*Its*: H. O. Pub. no. 225) 41 refs.

Charts were prepared by Scripps Institution of Oceanography from data collected by the U. S. Hydrographic Office and other sources as listed. Isotherms at intervals of 5° F. are shown on 12 monthly charts of four oceanic areas: the Atlantic, including Labrador Sea, Baffin Bay-Davis Strait, Greenland Sea, Denmark Strait, and eastern Barents Sea; eastern Pacific Ocean, with the Gulf of Alaska; the western Pacific, including Bering Sea and Strait and Sea of Okhotsk; Indian Ocean. Mean, extreme, and interpolated ice limits are shown on each chart.

37936. U. S. HYDROGRAPHIC OFFICE. World port index. Locations and general descriptions of maritime ports and shipping places, with references to appropriate Sailing Directions and charts. Washington, D. C., U. S. Govt. Print. Off.,

1953. xxiii, 230 p. 21 charts. (*Its*: H. O. Pub. no. 950)

Contains means of locating ports in all parts of the world and information as to their nature, general facilities and services. Information is tabulated, some in code, with code key at head of each page. Ports are arranged in geographic sequence and grouped under headings as to country or general locality. Charts preceding the tabulated material show geographic and numerical sequence of ports, and an alphabetical index of ports is included referring to the text by number. Information given for each port includes: lat. and long.; publication number of U. S. Hydrographic Office Sailing Directions, U. S. Coast & Geodetic Survey or British Admiralty publications covering region of port; number and publisher of the best-scale chart covering the region, size, type harbor, shelter afforded, entrance restrictions, depths of channel, anchorage, and wharf; tide (ft.); pilotage; supplies available if any; repairs; drydock; marine railway. Arctic areas include: coasts of Mackenzie District, Hudson Bay, Labrador, Greenland, U.S.S.R., Alaska, Svalbard, and northern Norway.

37937. U. S. LIBRARY OF CONGRESS. PROCESSING DEPARTMENT. Monthly list of Russian accessions. Washington, D. C., Apr. 1948—*in progress*.

Record of current Russian accessions in the Library of Congress and more than 80 other libraries in the United States; indispensable guide to available publications in Russian and some other languages of the U.S.S.R. issued in or

outside that country. Books, serials, and articles in each issue of the latter are listed with titles in Russian and English as well as bibliographic data. The list has a broad subject (17) breakdown and a very detailed subject index, as well as other useful features. Arctic and subarctic materials are listed briefly in sections: general works, geography and geology, science, agriculture, and naval sciences.

37938. U. S. LIBRARY OF CONGRESS TECHNICAL INFORMATION DIVISION. Bibliography on snow ice and permafrost, with abstracts. Washington, D. C., 1954. 2 v: 293 p.; 366 p. (SIPRE report no. 12, v. 5-6, Jan.-July 1954)

The bibliography contains 3000 abstracts prepared by Library of Congress personnel, under direction of John Sherrod. The abstracts are arranged in numerical order and are supplemented by cumulative author and subject indexes for v. 1-6. A cumulative title index (v. 1-6) is given for abstracts in which the authors were unidentified and for certain mnemonic titles. Vols. 1-4 are listed as *Arctic Bibliography*, No. 26960, 32623.

37939. U. S. MEDICAL NUTRITION LABORATORY, Chicago. Final report of survival in the cold: a metabolic and nutritional study of soldiers acclimatized to heat transported abruptly to a very cold climate 4 January - 11 February 1948. Chicago, Nov. 30, 1948. xiv, 78 numb. 1., 47 fig. (incl. photos., diagr., map), 53 tables. (Project C6-60-11-10. Survival ration. Report no. 42) 57 refs.

Report of a "comprehensive nutritional, biochemical and physiological study" of 32 U. S. Air Force men acclimatized to Florida winter conditions, flown in Jan. 1948 to Camp Shilo, Manitoba, and placed in survival situation in bivouac for 12 days (mean temperature -3° F.). The aim of the study was to ascertain the reactions of untrained, unacclimatized subjects to abrupt exposure to extreme cold; their nutritional requirements; the value of current emergency rations, etc. Observations included: physical and anthropometric examinations; medical and psychiatric history; physiology and biochemistry; hematology, etc.

37949. U. S. WEATHER BUREAU. STATISTICS DIVISION. Climatology of the Arctic regions. [Washington, D. C.], Dec. 1946. 3 v. maps, charts, graphs, 94 tables. (U. S. Air Weather Service. Special study, no. 58) 113 refs.

"Revision of the U. S. Weather Bureau, Preliminary report, no. 36, Climatology

of the Arctic regions, originally written in the latter part of 1942. A study of possible Arctic air routes, but containing so much basic climatic data and discussion of permanent value that even as late as 1946 when reissued it had not been superseded with respect to quality and quantity of data. The report concerns the American, European and Asiatic Arctic and sub-Arctic regions; Greenland and the Arctic Ocean and adjacent areas. Pt. I includes a discussion of the general atmospheric circulation and the air masses involved and of the synoptic weather situations occurring most frequently. Pt. II consists of a detailed discussion of certain weather factors such as visibility and illumination, cloudiness and ceilings, temperature, precipitation, snow cover and sea ice. Pt. III includes tables and graphs of climatic data and a bibliography. The whole work contains summaries of most of the available climatic data, both published and unpublished, on the Arctic and sub-Arctic, up to 1942. Upper air as well as surface data are used."—*Meteorological abstracts & bibliography*, Sept. 1954. v. 5, no. 9, p. 1094.

Copy seen: DWB.

37950. UNITED STATES NAVAL INSTITUTE, Annapolis, Md. Alaskan defenses tightened. (*Its*: Proceedings, Oct. 1954. v. 80, no. 10, p. 1174-75)

Contains short account of the status of Alaska's defenses, based on article in the *Christian science monitor*, Aug. 3, 1954, from an interview with Lt. Gen. J. H. Atkinson, head of the Alaskan Command. A radar warning net spans Alaska's western and northern coastline, which is supplemented by a higher-powered automatic radar system under construction along the arctic coast. Completion of the eight-inch Haines to Fairbanks pipeline in 1955 will ease the fuel problem for Alaska-based aircraft.

Copy seen: DLC.

37951. UNITED STATES NAVAL INSTITUTE, Annapolis, Md. Arctic air bases to be on ice cap. (*Its*: Proceedings, May 1952. v. 78, no. 5, p. 580-81)

Contains note (based on article in the *New York Herald tribune*, Mar. 11, 1952) on a U.S. Air Force expedition from Fairbanks, Alaska, to the polar ice-cap, spring 1952, to establish a base for weather observations and to offset Soviet diplomatic claims made on the basis of landings at the Pole before World War II. Strategic importance of the polar regions in air travel is noted.

Copy seen: DLC.

37952. UNITED STATES NAVAL INSTITUTE, Annapolis, Md. Arctic cruise. (*Its*: Proceedings, Nov. 1950. v. 76, no. 11, p. 1269)

Contains note (based on article in *Christian science monitor*, Sept. 1, 1950) on the 1950 summer supply trip made by U.S. Coast Guard ice-breakers *Eastwind* and *Edisto* and two cargo ships to three U.S.-Canadian weather stations in the Canadian Arctic Islands. The *Eastwind's* most northerly point, 82°36'45" N. (445 nautical miles from the Pole) is believed to be the northernmost point in the Western Hemisphere reached by a ship under its own power.

Copy seen: DLC.

37953. UNITED STATES NAVAL INSTITUTE, Annapolis, Md. Arctic "pup tent" for planes. (*Its*: Proceedings, Nov. 1950. v. 76, no. 11, p. 1275-76)

Contains note (based on article in *New York Times*, Sept. 2, 1950) on a shelter designed for subzero temperatures and large enough for any American fighter plane. Designed and developed by the U. S. Navy, Air Force, and General Textile Mills, the tent is insulated by glass-fiber cloth, and its aluminized inner side reflects heat and light. Tent and frame together weigh less than 5,000 lbs. and are built to withstand 70 mph winds and snow load of 30 lbs.

Copy seen: DLC.

37954. UNITED STATES NAVAL INSTITUTE, Annapolis, Md. Arctic radar fence guards U. S. (*Its*: Proceedings, Mar. 1954. v. 80, no. 3, p. 358-59)

Contains note (based on article in the *New York Herald tribune* Jan. 2, 1954), on the "McGill Fence," a robot electronic device which is an adaptation and simplification of radar. It will report the presence, direction, and speed of aircraft at a small fraction of the cost of a conventional radar station such as those set up across Canada in Operation Pinetree. The "fence" will supplement existing radar chains in the Canadian Arctic.

Copy seen: DLC.

37955. UNITED STATES NAVAL INSTITUTE, Annapolis, Md. Arctic radar station tested. (*Its*: Proceedings, Dec. 1953. v. 79, no. 12, p. 1388)

Contains note (based on article in the *Christian science monitor*, Oct. 4, 1953) on a new radar system designed to give at least six hours warning of enemy aircraft approach via the North Pole. Initial installations are near Barter

Island (70°08' N. 143°40' W.) northern Alaska, 1,200 miles from the Pole. The apparatus is independent of human attention and not affected by magnetic storms.

Copy seen: DLC.

37956. UNITED STATES NAVAL INSTITUTE, Annapolis, Md. Arctic rail line. (*Its: Proceedings*, May 1951. v. 77, no. 5, p. 556)

Contains note (based on article in *Combat*, Nov. 1950) on completion of a branch rail line between Ust'-Kozhva (approx. 65° N. 57° E.) on the Pechora River, and Vorkuta (67°30' N. 64° E.) in Arkhangel'skaya Oblast', a distance of 500 km.

Copy seen: DLC.

37957. UNITED STATES NAVAL INSTITUTE, Annapolis, Md. Arctic survey. (*Its: Proceedings*, Aug. 1951. v. 77, no. 8, p. 904-905)

Contains note (based on article in the *Providence Journal*, May 24, 1951) on Operation Skijump (Beaufort Sea and Arctic Basin), spring 1951. The ten-man survey team was led by E. M. Ward. "A series of 12 prolonged flights over the ocean with landings far north of Alaska revealed a series of natural airstrips of ice, six to 14 ft. thick, proving for the first time the versatility and feasibility of using aircraft between Alaska and the Pole." Research on ocean depths, temperature and salinity of water and ice, and on marine life was carried on by two scientists from Woods Hole Oceanographic Institution.

Copy seen: DLC.

37958. UNITED STATES NAVAL INSTITUTE, Annapolis, Md. Atom-powered submarine described by Chief of the Bureau of Ships. (*Its: Proceedings*, Mar. 1953. v. 79, no. 3, p. 343-44)

Contains note (based on article in the *Christian science monitor*, Dec. 24, 1952) on the USS *Nautilus*, one of two nuclear-powered submarines being built by the U.S. Navy. Advantages over conventional submarines are noted, with emphasis on its independence of the earth's atmosphere and ability to operate under the ice for long periods of time.

Copy seen: DLC.

37959. UNITED STATES NAVAL INSTITUTE, Annapolis, Md. Canadian Navy to run arctic radio station. (*Its: Proceedings*, Jan. 1954. v. 80, no. 1, p. 119)

Contains note (based on article in the *Christian science monitor*, Oct. 24, 1953)

on Canadian Navy operation of radio station on Padloping Island (67°05' N. 62°40' W.), off the east coast of Baffin Island, formerly operated by the U.S. Air Force. The station makes meteorological observations and provides radio navigational aids to aircraft.

Copy seen: DLC.

37960. UNITED STATES NAVAL INSTITUTE, Annapolis, Md. *Cochino* accused of spying. (*Its: Proceedings*, Nov. 1949. v. 75, no. 11, p. 1309-1310)

Contains note (based on article in the *New York Herald Tribune*, Sept. 21, 1949) on explosion and loss at sea of U.S. submarine *Cochino* off northern Norway on Aug. 26, 1949. The ship was part of a four-submarine flotilla on a routine cruise outside Norwegian territorial waters. Russian publications accused the ship of attempting to scout out military information and claimed the sinking was "not far from Murmansk." A note (*ibid.*, p. 1305) based on article in the *Christian science monitor*, Sept. 2, 1949, states that according to the U.S. Navy, the nearest port was Hammerfest.

Copy seen: DLC.

37961. UNITED STATES NAVAL INSTITUTE, Annapolis, Md. Denmark builds novel arctic cargo ship. (*Its: Proceedings*, Nov. 1952. v. 78, no. 11, p. 1274-75)

Contains note (based on article in *New York Times*, Aug. 25, 1952) on the *Kista*, designed for navigation in the Arctic and Antarctic and launched Jan. 16, 1952. The ship is 185 ft. long, deadweight tonnage 1,200, with accommodation for 24 passengers in addition to cargo. The bow is designed for ice-breaking, stem and shell-plating are strengthened for ice, and a variable-pitch propeller operated from wheelhouse or crow's nest increases ice-breaking ability 30 percent. Other features are noted. The ship was chartered to the Greenland Trading Co. for the 1952 summer season.

Copy seen: DLC.

37962. UNITED STATES NAVAL INSTITUTE, Annapolis, Md. Flights bag polar military facts. (*Its: Proceedings*, Feb. 1951. v. 77, no. 2, p. 221)

Contains note (based on article in *Christian science monitor*, Nov. 20, 1950) on the North Pole ("Ptarmigan") flights made since 1947 by the 375th Strategic Reconnaissance Squadron of

the U. S. Air Force from Eielson Field near Fairbanks, Alaska. Modified B-29 bombers are used, and two tons of survival equipment are carried. Twenty meteorological observations are made on each flight.

Copy seen: DLC.

37963. UNITED STATES NAVAL INSTITUTE, Annapolis, Md. Greenland: conditions at Thule described. (*Its:* Proceedings, Dec. 1952. v. 78, no. 12, p. 1390-92, illus.)

Contains short account (based on article in the *Christian science monitor*, Oct. 3, 1952) of life at the U. S. Air Force base at Thule, North Greenland. Winds of 125 mph and over, the summer fogs, and limited recreational facilities are noted as problems.

Copy seen: DLC.

37964. UNITED STATES NAVAL INSTITUTE, Annapolis, Md. Greenland radar. (*Its:* Proceedings, July 1951. v. 77, no. 7, p. 787)

Contains note (based on article in *Providence Journal* Apr. 28, 1951) on Danish agreement to permit the U. S. to maintain radar networks, weather stations, and air bases on Greenland. Privileges held since 1941 will continue as long as the U. S. and Denmark are in the North Atlantic Security Treaty.

Copy seen: DLC.

37965. UNITED STATES NAVAL INSTITUTE, Annapolis, Md. Icebreaker operates near Pole. (*Its:* Proceedings, Nov. 1952. v. 78, no. 11, p. 1281)

Contains note (based on article in the *San Francisco Chronicle*, Aug. 24, 1952) on the U. S. Coast Guard icebreaker *Eastwind*, part of a task force supplying Canadian-U. S. weather stations in the Canadian Arctic Islands, Aug. 1952. The ship reached 82°38'20" N., 508 statute miles from the Pole, probably the farthest north reached by any ship under its own power.

Copy seen: DLC.

37966. UNITED STATES NAVAL INSTITUTE, Annapolis, Md. Low frequency radio ranges blamed for Air Force crashes in Alaska. (*Its:* Proceedings, Apr. 1953. v. 79, no. 4, p. 463)

Contains note (based on article in *Aviation Week*, Jan. 19, 1953) on approval by CAA of U. S. Air Force recommendations for 16 additions and changes

to the low-frequency radio ranges in Alaska. Precipitation static on the low-frequency range signals in bad weather was considered partly to blame for crashes of two troop carrier planes in Nov. 1952. Four VHF omnirange installations will also be made in Alaska as result of the accident investigations.

Copy seen: DLC.

37967. UNITED STATES NAVAL INSTITUTE, Annapolis, Md. Low temperature lubricant. (*Its:* Proceedings, Nov. 1951. v. 77, no. 11, p. 1247)

Contains note (based on article in *Technical data digest*, Aug. 1951) on a synthetic grease which operates satisfactorily on antifriction bearing surfaces and light to moderately loaded gears and screw mechanisms in temperatures as low as -100° F. It was developed by the Petroleum Products Branch of the Materials Laboratory, Research Division, Wright Air Development Center.

Copy seen: DLC.

37968. UNITED STATES NAVAL INSTITUTE, Annapolis, Md. A million square miles of ice and mystery. (*Its:* Proceedings, Nov. 1954. v. 80, no. 11, p. 1294-95)

Contains short account (based on article in *The Crowsnest*, July 1954, v. 6, no. 9) of Canada's interest in the Canadian Arctic as manifested in the voyage of the new Royal Canadian Navy patrol ship *Labrador* in 1954. Its main purpose is to collect hydrographic data, during the limits of the ice navigation season. The *Labrador* is a specially designed ship with ice-breaking qualities.

Copy seen: DLC.

37969. UNITED STATES NAVAL INSTITUTE, Annapolis, Md. Moscow reports arctic sea divide. (*Its:* Proceedings, July 1954. v. 80, no. 7, p. 828)

Contains note (based on article in the *New York times*, Apr. 30, 1954) on recent discoveries by Russian scientists in the Arctic Basin. A vast underwater divide 2½-3 km. (8,000-10,000 ft.) high between the New Siberian Islands and Greenland is reported. A map of the deepest central part of the Arctic Basin has been produced. Research in structural geology and terrestrial magnetism is also briefly described. The research program, begun in 1948, was based on floating stations set up on the ice of the Arctic Ocean.

Copy seen: DLC.

37970. UNITED STATES NAVAL INSTITUTE, Annapolis, Md. Navy counters Russian submarine threat. (*Its: Proceedings*, Jan. 1952. v. 78, no. 1, p. 100)

Contains note (based on article in the *New York Herald Tribune*, Nov. 12, 1951) on development of submarines capable of staying under water for long periods without a snorkel breather tube. Possibilities of future submarines navigating successfully under the ice of the Arctic Basin are noted. U. S. and British navies since World War II have sent submarines beneath the polar ice for depth soundings. Experiences of the British snorkel submarine *Ambush* during arctic investigations are briefly described. **Copy seen:** DLC.

37971. UNITED STATES NAVAL INSTITUTE, Annapolis, Md. Navy demonstrates new lifeboat. (*Its: Proceedings* Sept. 1952. v. 78, no. 9, p. 1046)

Contains note (based on article in *New York times*, July 17, 1952) on an airborne rubber lifeboat that inflates in 30 seconds and provides protection for 15 men in sub-zero or tropical waters. Tests by the U. S. Navy in the Arctic show that heat from the men's bodies holds the temperature inside the canopy of the boat close to 70° F.

Copy seen: DLC.

37972. UNITED STATES NAVAL INSTITUTE, Annapolis, Md. Navy plans new icebreaker. (*Its: Proceedings*, Apr. 1952. v. 78, no. 4, p. 453)

Contains note (based on article in the *Washington post*, Feb. 9, 1952) on future ice-breaker capable of breaking through ice 20 ft. thick. The ship, to be built for the U. S. Navy by Ingalls Ship Building Corp. Pascagoula, Miss., will have length of 310 ft. and 8,300 ton displacement. World War II ice-breakers were 5,500 tons.

Copy seen: DLC.

37973. UNITED STATES NAVAL INSTITUTE, Annapolis, Md. Navy rockets aid cosmic ray research. (*Its: Proceedings*, Dec. 1952. v. 78, no. 12, p. 1384-85)

Contains note (based on article in the *New York times*, Oct. 17, 1952) on a U. S. Navy cosmic ray project carried out in summer 1952 by a party of nine civilian and naval scientists led by J. A. van Allen. Balloons with instruments attached were launched from the

deck of the U. S. Coast Guard ice-breaker *Eastwind* in northern Kane Basin near the North Geomagnetic Pole (78.5° N. 69.6° W.). In this region minimum deviation of cosmic ray particles occurs, and many lower-charged particles come within the field of measurement. The balloon experiments are briefly described. The *Eastwind* was on regular supply mission to U. S.-Canadian weather stations in the Canadian Arctic Islands.

Copy seen: DLC.

37974. UNITED STATES NAVAL INSTITUTE, Annapolis, Md. New ice breaker launched. (*Its: Proceedings*, Dec. 1954. v. 80, no. 12, p. 1414-15)

Contains short account (based on announcement from Pascagoula, Miss. Aug. 27, 1954) of launching of U. S. S. *Glacier* at the Ingalls Shipbuilding Corp. yard in Pascagoula. The *Glacier* (8300 tons) is the largest and most powerful U. S. ice-breaker, capable of breaking ice more than 15 ft. thick and first to be launched with pontoons fore and aft to provide extra buoyancy and lift.

Copy seen: DLC.

37975. UNITED STATES NAVAL INSTITUTE, Annapolis, Md. Northwest Passage. (*Its: Proceedings*, July 1951. v. 77, no. 7, p. 775-76)

Contains note (based on article in *Christian science monitor*, Apr. 24, 1951): the Northwest Passage has been traversed (by 1951) only three times. Air reconnaissance can now aid navigation, charting the open leads for ship's course. Weather and ice observations during the last three months of the year, when ice is forming, are helpful in predicting ice conditions for the following summer.

Copy seen: DLC.

37976. UNITED STATES NAVAL INSTITUTE, Annapolis, Md. Norwegian newspaper reveals Soviet air bases near border. (*Its: Proceedings*, Apr. 1953. v. 79, no. 4, p. 462)

Contains note (based on articles in the *New York times*, Jan. 29, 1953 and *Morgenposten* (Norwegian), Jan. 28, 1953) on five Soviet airfields on the Kola Peninsula, less than 31 miles from the Norwegian border. The fields are located in a line north, west, and southwest of Petsamo (Pechenga). The U.S.S.R. is said to have 50 airfields and about 900 planes in the Kandalaksha-Murmansk sector, five land divisions, and three cruisers, 25-30 escort and anti-submarine

units, 70 motor torpedo boats, 40 mine-layers and sweepers, and 50 landing craft on the arctic seaboard.

Copy seen: DLC.

37977. UNITED STATES NAVAL INSTITUTE, Annapolis, Md. Pines aid arctic flights. (*Its: Proceedings*, Mar. 1954. v. 80, no. 3, p. 361-62)

Contains note (based on article in the *Washington post*, Jan. 11, 1954) on special lubricants made from pine gum by chemists of the U. S. Office of Naval Research and U. S. Dept. of Agriculture. These lubricants (high-boiling alcohols mixed with pinic acid) remain fluid and help jet engines start and run at temperatures of -75° F. Ordinary petroleum lubricants become gummy.

Copy seen: DLC.

37978. UNITED STATES NAVAL INSTITUTE, Annapolis, Md. Sea routes north of Russia described. (*Its: Proceedings*, Apr. 1953. v. 79, no. 4, p. 456-57)

Contains note (based on article in *Revue maritime*, Dec. 1952) on the Northern Sea Route of the U.S.S.R., with a list of ports and distances between major ports, also comments on climate, resources of northern Siberia, the Administration of the Northern Sea Route (Glavsevmorput') and the strategic importance of the Route.

Copy seen: DLC.

37979. UNITED STATES NAVAL INSTITUTE, Annapolis, Md. Ships, men, and ice. (*Its: Proceedings*, Feb. 1954. v. 80, no. 2, p. 198-209, 20 illus.)

The U. S. Navy training film, *Ships, men, and ice*, was released by the Naval Photographic Center in 1954. Designed for navy personnel interested in arctic exploration and ship design, the film covers the development of arctic ships from the ancient bireme to modern *Wind*-class ice-breaker. Modern ice-breakers were filmed in color, while color paintings of earlier arctic ships were made, then filmed with animation motion picture camera. Research involved in the production is briefly described and 20 paintings from the film are shown.

Copy seen: DLC.

37980. UNITED STATES NAVAL INSTITUTE, Annapolis, Md. Soviet fortifying Baltic in attempt to form a Russian lake. (*Its: Proceedings*, Apr. 1953. v. 79, no. 4, p. 458-59)

Contains note (based on article in the *New York times*, Feb. 6, 1953) on increase of Russian military strength in the Baltic-Arctic region. Plans for submarine and limited cruiser operation from the Barents Sea, and disposition of airfields to protect Russia from air attacks based on Greenland, Iceland, Norway, and Alaska are noted. Comments are made on industrial development along the Pechora River, the quadrupling of population in the whole northern region, the strength of the arctic fishing and merchant fleets, submarines in the White Sea, and cruisers, destroyers, and destroyer escorts of the Arctic Fleet. Soviet naval bases on the Kola Peninsula and Arkhangel'sk Province, airfields, and estimated number of aircraft are noted.

Copy seen: DLC.

37981. UNITED STATES NAVAL INSTITUTE, Annapolis, Md. Soviet leads in polar race. (*Its: Proceedings*, Oct. 1953. v. 79, no. 10, p. 1150-51)

Contains note (based on article in the *Christian science monitor*, July 22, 1953) on Russian military preparations in the Arctic. According to reports, Russia maintains some 70 bases, airfields, meteorological stations, and other establishments inside the Arctic Circle, has the world's largest fleet of ice-breakers, and approx. half a million combat and supply forces trained for arctic warfare. An important part of the Russian Navy is also concentrated in arctic waters. Efforts to exploit mineral resources of arctic Siberia are noted.

Copy seen: DLC.

37982. UNITED STATES NAVAL INSTITUTE, Annapolis, Md. Soviet orders arctic ships. (*Its: Proceedings*, July 1954. v. 80, no. 7, p. 835)

Contains note (based on article in the *New York times*, May 17, 1954) on order for three motor freight ships, reinforced for use in arctic waters, placed by the Soviet Union with the Schelde co. at Flushing, the Netherlands. The company received a Soviet order in 1950 for three similar ships. One has been delivered.

Copy seen: DLC.

37983. UNITED STATES NAVAL INSTITUTE, Annapolis, Md. Story of a submarine that penetrated arctic ice released. (*Its: Proceedings*, May 1953. v. 79, no. 5, p. 577-78)

Contains note (based on article from the *Christian science monitor*, Feb. 21,

1953) on the first of a series of explorations made by the USS. *Redfish* north of Alaska. The submarine cruised 22 miles under the ice during an eight-hour period before surfacing at a break in the ice field. The new atom-powered submarine *Nautilus* now under construction will be the fastest underwater ship ever built and capable of making the 6,000 mi. trip across the Arctic Basin to Eurasia and back.

Copy seen: DLC.

37984. UNITED STATES NAVAL INSTITUTE, Annapolis, Md. Survey under way of Bering Sea. (*Its:* Proceedings, Feb. 1952. v. 78, no. 2, p. 215)

Contains note (based on article in *Christian science monitor*, Dec. 1, 1951) on mapping operations over 47,000 sq. mi. of the Bering Sea, carried on by the U.S. Coast and Geodetic Survey. Three ships and about 350 men were occupied for six months.

Copy seen: DLC.

37985. UNITED STATES NAVAL INSTITUTE, Annapolis, Md. Synthetic furs. (*Its:* Proceedings, June 1951. v. 77, no. 6, p. 674-75)

Contains note (based on article in *Technical data digest*, Mar. 1951) on a nylon bristle-like material developed by the U.S. Air Materiel Command, Aero-Medical Laboratory, as a substitute for wolf's fur used to face parkas. Material will shed moisture, ice particles may be brushed off, it is easier to work with, and may be cut in any shape or form, an advantage over natural furs.

Copy seen: DLC.

37986. UNITED STATES NAVAL INSTITUTE, Annapolis, Md. Thick ice found on polar cap. (*Its:* Proceedings, June 1952. v. 78, no. 6, p. 691-92)

Contains note (based on article in the *New York times*, Mar. 19, 1952) on a 34-man U.S. Navy (eight civilian scientists) expedition to the polar icecap Mar. 1952, led by Comdr. V. J. Coley. The expedition is trying to set up observation posts near the Pole. The statement that ice 10,000 to 20,000 ft. deep was found, is subsequently amended in the *Proceedings*, Nov. 1952. v. 78, no. 11, p. 1255, where W. V. Kielhorn states the ice depth to have been rarely greater than 12-14 ft. and in most places, five to six feet.

Copy seen: DLC.

37987. UNITED STATES NAVAL INSTITUTE, Annapolis, Md. U.S.S.R.: reinforcement to arctic fleet. (*Its:* Proceedings, Jan. 1954. v. 80, no. 1, p. 119)

Contains note (based on article in *Revue maritime*, Oct. 1953) on cruiser of the *Sverdlov* class which probably joined the arctic fleet at Murmansk (from the Baltic fleet) in Aug. 1953. Four vessels of this class are now in northern waters: *Zhelezniakov*, *Chapaev*, *Sverdlov*, and one of undetermined type.

Copy seen: DLC.

37988. UNITED STATES NAVAL INSTITUTE, Annapolis, Md. U.S.S.R. Submarines operating in Arctic. (*Its:* Proceedings, Oct. 1949. v. 75, no. 10, p. 1194-95)

Contains note (based on article in the *New York times*, July 23, 1949) on reports from Norwegian fishermen at Hammerfest, northern Norway. Submarines have been observed outside Norwegian territorial waters as far north as the edge of the polar ice pack, about 80° N. The ships are probably stationed at Murmansk, Arkhangel'sk, and Pechenga (Petsamo).

37989. UNITED STATES NAVAL INSTITUTE, Annapolis, Md. U. S. Air Force flights to North Pole. (*Its:* Proceedings, Jan. 1952. v. 78, no. 1, p. 107-108) 3 refs.

Contains note on the Ptarmigan Flights by the 375th Reconnaissance Squadron (V. L. R.) Weather commanded by Lt.-Col. K. T. Rauk. Occasional flights began in 1946 from Ladd Field near Fairbanks, Alaska, to the Pole by way of Pt. Barrow. Regular flights were initiated in 1947, from Ladd Field via Pt. Barrow or Aklavik (Mackenzie delta) and Mould Bay (Prince Patrick Island). Flights are made on alternate days in a modified Boeing B-29. The airplane, personnel, meteorological observations, and navigation are briefly described. This note is summarized from three non-official published sources.

Copy seen: DLC.

37990. UNITED STATES NAVAL INSTITUTE, Annapolis, Md. Weather station. (*Its:* Proceedings, May 1951. v. 77, no. 5, p. 554)

Contains note (based on article in the *Providence Journal*, Mar. 10, 1951) on a U. S. all-year weather station established on a floating ice pack in the Arctic Ocean about 200 miles north of Alaska. The group averages 15 men, supplied by C-47's. Weather observations and tests on clothing and equipment are made.

37994. URVANTSEV, NIKOLAI NIKOLAEVICH. K otkrytiyu farvatera reki Piasiny. (Leningrad. Arkticheskii . . . institut. Bülleten', 1932. v. 2, no. 11-12,

p. 269-70) Text in Russian. **Title tr.:** Discovery of a navigation channel in the Pyasina River.

The author challenges the 1932 Pyasina Expedition's claim to the discovery, and asserts that the navigation channel in the delta of the Pyasina River had been found in 1922 by the Geological expedition which he himself headed.

Copy seen: DLC.

37995. URVANTSEV, NIKOLAI NIKOLAEVICH. K voprosu o ratsional'nom tipe postroek v Arktike. (Leningrad. Arkticheskii . . . institut. Bülleten', 1932. v. 2, no. 11-12, p. 270-72) Text in Russian. **Title tr.:** The proper type of buildings for the Arctic.

From his many years' experience in the Arctic, the author criticizes the complicated construction of dwellings in arctic areas, and suggests conventional wooden buildings with slight modifications. A prefabricated house, cut of 25 x 20 cm. logs according the author's plans and assembled in Novaya Zemlya, is described; its efficiency is stressed; plywood construction is proposed for stores, garages, etc. cf. *Arctic Bibliography*, No. 18437.

37997. URVANTSEV, NIKOLAI NIKOLAEVICH. Svedeniya o rezul'tatakh geologo-geomorfologicheskogo obsledovaniya Severnoi Zemli. (Leningrad. Arkticheskii . . . institut. Bülleten', 1932. v. 2, no. 2, p. 21-24, 40-43) Text in Russian and in English. **Title tr.:** Notes on results of the geological and geomorphological exploration of Severnaya Zemlya.

Interim report by radio from the chief scientist of the Domashniy Island Polar station currently with the Severnaya Zemlya Expedition of 1930-1932, headed by G. A. Ushakov. A geological

reconnaissance was carried out on two of the three main islands of the archipelago, Komsomolefs and Oktyabr'skoy Revolyutsii; their geomorphology, geology, stratigraphy, tectonics, paleontology are outlined, as well as the glaciation of coasts and interior. Inland ice and glaciers cover 80 to 90 percent of Komsomolefs, and 50 to 60 percent of Oktyabr'skoy Revolyutsii Island; the glaciers are in retreat, some relict; the boreal transgression in the area reached as far as 70 m. above the present sea level. cf. *Arctic Bibliography*, No. 32647.

Brief account of the third Conference on Investigation of Far Eastern Marine Fauna, held in Leningrad Jan. 28-31, 1954, with an attendance of more than two hundred. Of some forty papers presented, the more important are noted, among them one on compiling maps of fishing grounds ("ryboposkovye karty") by G. U. Lindberg, E. F. Gur'fanova. K. A. Brodskii, the fluctuation of fish resources in Kamchatka (E. M. Krokhin), conservation of the seal herd and sea otters (B. N. Vasin), and one on marine fauna at 8,000-10,000 m. depth (T. S. Rass). The conference called attention to the lag in investigation of several parts of Bering Sea, important for fisheries.

38006. USHER, JOHN LESLIE, 1922- Brown "coal" in the Labrador Trough. (Geological Association of Canada. Proceedings, 1954. v. 6, pt. 2, p. 99-101)

In summer 1952 the Iron Ore Co. of Canada carried on a detailed drilling program at the Ruth Lake iron ore deposit (No. 3) near the terminus of the Quebec North Shore & Labrador Railway in the Knob Lake region (54°48' N. 66°50' W.). A black soft carbonaceous material was encountered at varying depths between 165 and 345 ft., in each case overlain and underlain by iron ore. The "coal" consisted of goethite and quartz grains in a matrix of carbonaceous debris with many fragments of soft lignitized wood. Analyses are discussed and two explanations for its occurrence are given: (1) it was deposited in Mesozoic or Cenozoic time in an area underlain at the surface by iron ore and later folded or faulted into the ore; (2) it is a very localized crevasse filling. Geologic implications of both explanations are briefly discussed.

Pokrovskii, and P. D. Bogdanov. **Title tr.:** Organization of the reindeer fodder supply in Chukotka.

The amount of reindeer moss available as winter pasture is often regarded as the factor controlling the size of herd in the area. This opinion is refuted by investigation of actual winter grazing sites: in the Chukotsk and Anadyr' Districts reindeer moss represents only 37 and 35 percent of the winter fodder, the remainder being grass, dry leaves, etc. These observations open new possibilities in the organization of reindeer pastures, of great significance in areas where reindeer moss exhausted by grazing, becomes replaced by higher plants.

38018. VAARTAJA, OLLI. Photoperiodic ecotypes of trees. (Canadian journal of botany, May 1954. v. 32, no. 3, p. 392-99, illus., 2 tables) 13 refs. Also pub. as: Canada. Dept. of Agriculture. Division of Forest Biology. Contribution, no. 126.

"Seedlings of *Pinus sylvestris* L. and *Alnus incana* (L.) Moench, from two widely different latitudes [Tuusula, north of Helsinki, Oulu (65°03' N. 25°35' E.) and Kemijärvi (66°44' N. 27°25' E.)] were grown under two different photoperiods, but otherwise under optimum

conditions. Under continuous light the seedlings from a far northern latitude grew better than those from a more southern latitude. This situation was reversed under short photoperiods. Since the days of the growing season at the northern latitude are extremely long and those at the southern latitude relatively short, the difference in growth of the seedlings is explained as being the result of heritable adaptation of the trees. The experimental results thus support the theory that within tree species there are 'photoperiodic ecotypes' which during evolution have adapted themselves to the photoclimate of their environment."—Author's abstract.

38019. VAETH, JOSEPH GORDON, 1921- . Rockets in the Arctic. (Flying, New York, Apr. 1953. v. 52, no. 4, p. 16-17, 53, illus.)

"Flights to 40 miles height were made over Baffin Bay in the summer of 1952, by launching 'Deacon' rockets from 'Skyhook' balloons, which in turn were launched from the deck of a naval vessel steaming along with the wind at the speed of the wind. The purpose of these soundings was to determine cosmic ray intensities over the Arctic. Hitherto flights to such high altitudes have been made only with the elaborate, costly V-2, WAC corporal or aerobee rockets. This introduces possibilities of simultaneous meteorological soundings from a network of stations at no more cost than one sounding with a big rocket."—*Meteorological abstracts & bibliography*, May 1954. v. 5, no. 5, p. 580.

Contains an account of experiments with normal and hypothermic (rectal temperature 27.2° C.) cats. "The damage of the cord as indicated by the change in its reflex activity, metabolism and histological structure, caused by a 35 minute asphyxiation at 38° is more severe than that after a 20 minute asphyxiation." A large temperature coefficient is claimed for the damaging processes.

(Akademiia nauk SSSR. Komissia po izucheniiu iakutskoi A.S.S.R. Materialy, vyp. 36) Text in Russian. **Title tr.:** Preliminary report on work among the Tungus of Aldan-Maya and Ayan-Okhotsk in 1926-1928.

Contains an account by the leader of the ethnographical section of the Yakutia expedition of 1925-1929, of two seasons' work: Tungus living in the triangle Yakutsk - Port Ayan - Okhotsk were visited; special attention was given to their customs, language, folklore and present economic situation, and a census taken of people and their reindeer. In the course of a 4,200 km. trip during Dec. 1926-Nov. 1927, and another trip in summer of 1928, the following places (mostly small villages) were visited:

Amgi, Petropavlovsk, Ust'-Mayskoye, Nel'kan, Port Ayan, Okhotsk, Arka and other places in the Aldan basin (cf. map), and a survey on the Tungus made. The most interesting ethnologically are the Tungus on the upper Maya and Ul'ya Rivers (about 59° N. 139°-142° E.). They are reindeer breeders, hunters and fishers, and are very poor (p. 36-38). The prospectors and traders of Okhotsk, are described: a very mixed population, including Tungus, Yakuts, and Kamchadals. Besides a narrative in journal form, of the travels, some details are given on Aldan-Maya Tungus (1612 individuals), their dwellings and occupation (p. 67-69), and on a few Yakuts of the Amga River (p. 81-82).

Contains description of a platform burial about 100 years old found and investigated by the writer in 1905 at Lake Yenisey, about 1000 km. northeast of Turukhansk. The wooden box contained a skeleton and several artifacts, including iron pendants to a shaman's costume, all the objects purposely broken or rendered useless. Several figures of birds, animals and fish, all carved from wood, were found around the grave. Burial customs for a shaman are sketched from narratives of natives.

Leningrad, 1936. vi, 290 p., music notes, ports. (Institut narodov Severa. Nauchno-issledovatel'skaiia assotsiatsiia. Trudy po fol'kloru, t. 1) **Title tr.:** Evenki (Tungus) folklore materials. pt. 1. Edited with introduction by I. A. P. Al'kor.

Contains Tungus texts in Latin characters, with Russian translations and comments upon the various types of folklore. The major part of material was recorded in dialect by G. M. Vasilevich from 1925 through 1931. The texts, noted down from several tribes, represent the northern, southern, and eastern Tungus dialects. Names and characteristics of the narrators are given, and a general characterization of Tungus folklore is presented in the introduction. The 120 Siberian Tungus texts noted down by G. M. Vasilevich (p. 7-146), consist of: animal tales, myths, historical narratives and epics, life-like tales, children's tales, riddles (67), shamanistic incantations, and various songs. Texts, with occasional introductions, by several other collectors included (p. 147-232) in the same volume are (titles translated):

Petrova, T. I. Tales of the Tungus on the Angara (11 items, recorded in 1927).

Nirguneev, G. A. Two Tungus tales from the Talochka River (recorded in 1926).

Titov, E. I. Oral creations of Tungus of the Baykal region (69 narratives, tales and songs, and 39 riddles, noted down in 1919-20, and 1925-26).

Levin, V. I. Two tales of the Ayan Tungus (noted down in 1930).

Kozlovskii, A. P. Tales of the Tunguro-Olekminsk Tungus (eight items, noted down in 1934).

Supplement (p. 233-86) contains several texts and papers reprinted from various earlier publications (titles translated):

Georgi, I. A Tungusian narrative.

Gut, G. Tungusian popular literature and its ethnological importance (eight songs with comments and references).

Gut, G. Fragments from variants of Tungusian legends.

Contains report on the economic situation of Chukchis and Asiatic Eskimos, based on the author's observations in the winter of 1922-23 at Bukhta Provideniya. Reindeer breeding of the Chukchis and sea hunting of the Eskimos are outlined. The western Chukchis have large reindeer herds, the northeastern ones are rather poor. The villages inhabited by Eskimos are named. Differences in the Chukchi and Eskimo character are outlined, the Eskimos are stated to show more initiative and to be more apt in adopting civilization. The Koryaks living around Bukhta Korfa are also considered. The great economic and cultural influence of modern America upon the Chukchis and Eskimos

is stressed. Commercial relations with American and Russian merchants (the latter came from Yakutsk to Kolyma) and the once famous, great northern fairs, are mentioned. Details are given on Eskimo and commercial whaling, preparation of native *kapal'khén* (walrus meat stored for winter in pits). Times of boom (1909-1915) and depression are characterized. Famine at the winter's end is common among the settled Chukchis. It is caused by the high cost of ammunition (four seals have to be killed to buy a box of 20 cartridges), and lack of large motor-boats. The author suggests that the natives should start fur farming to provide themselves with whale-boats and schooners, should learn to dress the sealskins on the spot, and should develop the ivory-carving industry.

Sankt-Peterburg, Synodal'naia Tip., 1893. xxiii, 24, 104, 51 p. **Title tr.:** The rudiments of Christian teaching, or a brief sacred history and a short Christian catechism; translated from the Russian language into Fox-Aleut by the Reverend Ioann Veniaminov in 1827 and revised in 1837; the Reverend priest Iakov Netsvĭtov reviewed and by his explanations made it understandable also to the Atkans, who have their own dialect.

Contains introduction (xiii p.) for each of these groups of Aleuts and Atkans (parallel text in the native dialects and Russian); a primer and texts of prayers also in both dialects and Russian (24 p.). The sacred history and catechism follow (104 and 51 p.). Native texts are printed in Old (Church) Slavonic characters and accented. Appended (5 p.) is text (in Russian and English) of a homily of the Right Reverend Nikolai, Bishop of Alaska and the Aleutian Islands, delivered on Dec. 25, 1896.

Copy seen: DLC.

38062. VENIAMINOV, IVAN EVSĖEVICH POPOV (Innokentii, *Metropolitan of Moscow*), 1797-1879. Wenjaminov über die Aleutischen Inseln und deren Bewohner. (Archiv für wissenschaftliche Kunde von Russland, 1842. Bd. 2, p. 459-95) Text in German. **Title tr.:** Veniaminov on the Aleutian Islands and their inhabitants.

Contains selected chapters from Veniaminov's *Zapiski ob ostrovakh Unalashkinskago oldĭela*, 1840, (*Arctic Bibliography*, No. 18650), condensed and translated into German by F. Lowe. Deals chiefly with the ethnography of the natives, both Aleuts and Tlingit Indians: their appearance and character, rearing of children, funeral customs, feasts and pastimes, warfare, religious beliefs, social classes, clothing, healing, language and folklore.

Contains characteristics of the families Vulturidae (vultures), Falconidae (falcons and allies), and Strigidae (owls) comprising the birds of prey. From these families a systematic enumeration is given of 27 species families native to Canada, with descriptions largely compiled from the notes of other writers, also data on life habit, migration, breeding grounds, nesting, eggs, and geographic distribution in Canada and other countries; thirty photographic illus. are added. Some species native to northern regions of Canada are included. This work is reviewed in Nuttall Ornithological Club. Bulletin, v. 2, p. 24-25, 1877.

38066. VER WIEBE, WALTER AUGUST, 1887- . North American petroleum. A complete summary of geological information on the occurrence of oil and gas in the United States and Canada, with a concluding chapter on the oil fields of the Middle East. Wichita, Kansas, 1952. 459 p. text maps, cross-sections, diagrs., 82 tables. refs.

Includes section (p. 411-15) on the Norman Wells oil field on the Mackenzie River, Northwest Territories. Burned shale and seepages were noted in 1789 and 1887, geological reconnaissance was made in 1913, and the first well drilled in 1920. By 1943, 67 wells had been drilled of which 60 were producers. The oil has accumulated in Devonian reef limestones which carry about 60 percent saturation. The field now covers 4,000 acres and is estimated to be capable of yielding 36 million barrels eventually.

Contains a study of ^{131}I uptake in the living animal (rat). At body temperature of 15° to 20°C ., the thyroid gland was completely inactive; at temperatures of 23° to 28°C . this activity is reduced, but large enough over a sufficiently long

period of time, to concentrate normal quantities of iodine. After one, or four to six successive phases of hypothermia, thyroid activity remained unchanged.

38069. VIAND, G., and CH. MARX. Données quantitatives sur les réactions motrices à la lumière des pigeons normaux et des pigeons sans hémisphères; attraction par la lumière et durée de privation de la lumière. (Société de Biologie, Paris. Comptes rendus, 1948. v. 142, p. 254-56.) Text in French. **Title tr.:** Quantitative data on the motor reactions to light of normal pigeons and of pigeons without hemispheres; attraction by light and duration of light privation.

Contains an account of experiments, with colored and white light admitted from a single source; "the attraction of the pigeons by the light, measured by the speed of locomotion towards the light, appears to depend, at least in part, on a "need of exercise of the visual function" evidenced by an augmentation of this speed, or of this attraction in consequence of a sufficiently long stay in darkness." This need is manifested in normal as well as in pigeons without hemispheres.—From *Psychological abstracts*, 1949. v. 23, p. 447.

38070. VIAND, G., and CH. MARX. Données quantitatives sur les réactions motrices à la lumière des pigeons normaux et des pigeons sans hémisphères; expériences en lumières monochroma-

tiques d'égale énergie. (Société de Biologie, Paris. Comptes rendus, 1948. v. 142. p. 251-54) Text in French. **Title tr.:** Quantitative data on the motor reactions to light of normal pigeons and of pigeons without hemispheres; experiments in monochromatic lights of equal energy.

In monochromatic lights as in white light, the reactions of both groups of pigeons showed remarkable differences from phototropism of lower animals. "In pigeons, orientation and motor impulsions towards the light are assured by the visual function. The authors have not found a trace of a dermatoptic function in the pigeon . . . there probably exists a reinforcing effect of the hemispheres on the motor reactions of pigeons." In both groups the reactions were much less clear with colored than with white light, and were best with green radiations of 530 to 510 mμ.—*Psychological abstracts*, 1949. v. 23, p. 447.

38071. VICTOR, PAUL ÉMILE, 1907-. The supply of expeditions by aircraft. (Polar record, Jan. 1954. v. 7, no. 47, p. 24-31, 4 illus. on 2 plates, text map, 2 diagrs., table) 2 refs.

During the course of Expéditions Polaires Françaises, 1948-1951, on the Greenland icecap, methods of transport developed during World War II were adopted, particularly the amphibious tracked vehicle (the weasel), and four-engined aircraft to drop supplies. Fourteen flights were made in 1949 for construction of the Station Centrale on the icecap, 21 in 1950, and 23 in 1951 to various supply points for the ground parties. Altogether 233 metric tons of stores and equipment were dropped. Types of aircraft, method of navigation and layout of the dropping zone are described, and the technique of dropping supplies is outlined. For free drops the aircraft should be five to ten m. above the surface and for parachute drops, not more than 100 m. Aircraft speed should be reduced as much as possible during the drop run as percentage of loss or damage largely depends on velocity with which the items strike the surface. Notes on parachute failures and fuel containers are appended.

Kansantieteellinen arkisto, 8) 138 refs. Text in Finnish; summary (p. 413-18) in German. **Title tr.:** On the fishing rights and societies of fishers among the

East Karelians; an ethno-sociological investigation.

Monograph based on many years' surveys among the eastern Karelians and Lydians from Olonets who settled in Finland proper; and on the author's trip to the Olonets region in 1943; archival material and the Russian-language literature were also explored. The fishing in Lake Ladoga, on the White Sea shores and in the inland lakes and rivers is investigated. Rights of communities, villages, and family groups to fish in certain places and at certain times, the fishing technique and equipment (nets, etc.), provision of working craft, division of the catch, the life of fishers during the fishing season, etc., as practiced at the end of the pre-revolutionary period in Russia, are studied. Special attention is given to the region on the White Sea where a mixed Russian-Karelian population did communal fishing and the enterprise was regulated by certain traditional laws. Documents mention a fishing society of five families which was already in existence in the 15th century in north-eastern Karelia. Social and material aspects of the fishing societies are considered.

38093. VIZE, VLADIMIR IUL'EVICH, 1886-1954. Dreif dvukh buev iz Karskogo moria v Norvezhskoe. (Leningrad. Arkticheskii . . . institut. Bülleten', 1933. v. 3, no. 1-2, p. 10, 39-40) Text in Russian. Summary in English. **Title tr.:** Drift of two buoys from the Kara to the Norwegian Sea.

The buoys were cast from the ice-breaker *Sedov* in the northern part of the Kara Sea in 1930: one on Aug. 13 at 79°20' N. 74°41' E., it was picked up on Mar. 24, 1932 in the open sea at 69°20' N. 6°15' E.; the other buoy dropped at 76°38' N. 85°20' E. on Sept. 3, was found on Dec. 3, 1932, near Hillesö Island at 69°39' N. 17°58' E. From their probable route, it is estimated that these buoys drifted at a rate over three miles a day.

38094. VIZE, VLADIMIR IUL'EVICH, 1886-1954. Ekspeditsiia na l/p "Malygin" na Zemliu Frantsa-Iosifa i na Novuiu Zemliu v 1931 g. (Leningrad. Arkticheskii . . . institut. Bülleten', 1931. v. 1, no. 8, p. 149-51, 169-71) Text in Russian and in English. **Title tr.:** A trip on the ice-breaker *Malygin* to Franz Joseph Land and Novaya Zemlya in 1931.

A sight-seeing trip chiefly, sponsored by the Soviet tourist agency "Inturist", and led by the author. The party left Arkhangel'sk on July 19, cruised in Barents Sea and in waters of Franz Joseph Land and Novaya Zemlya, returned to port, Aug. 20. The route, an encounter with the airship *Graf Zeppelin* on Franz Joseph Land, ice conditions, etc., are briefly noted. Though tourism was its main purpose, the trip included

scientists, among them Umberto Nobile, who carried out some meteorological, hydrological and geophysical observations; several small islands were discovered, errors in the maps of the Franz Joseph archipelago disclosed.

38095. VIZE, VLADIMIR IUL'EVICH, 1886-1954. Georgii Iakovlevich Sedov. (In: Lupach, V. S. Russkie moreplavatel. 1953, p. 317-26, illus., port.) Text in Russian.

Contains biographical notes on this Navy officer, hydrographer and arctic explorer, and account of his work in the Hydrographic Expedition of the Northern Arctic Ocean (1902-1904), surveying of the Kolyma River mouth (1909), and his Polar Expedition of 1912-14, on the *Sv. Foka*. The wintering of this ship near Novaya Zemlya, mapping of the western coast and Krestovye Islands, the voyage to Franz Joseph Land in 1913, second winter in Bukhta Tikhaya (80°20' N.), the last trip toward the North Pole and Sedov's death on May 5, 1914 (82° N.) are discussed.

Text in Russian. **Title tr.:** Hydrochemical conditions at the edge of the (pack) ice of the arctic seas.

A study of the effects of the melting ice (and the biological changes caused by it) upon the chemistry of the sea water, in both the horizontal and vertical dimension. Alkalinity, CO₂ pressure, pH, oxygen content, phosphates, nitrates and sulphates are determined and discussed. The investigations were conducted in the summer in the regions of Kara Sea and Spitsbergen.

38098. VIZE, VLADIMIR IUL'EVICH, 1886-1954. Plavanie Severovostochnym prokhodom na l/p "Sibirakov." (Leningrad. Arkhticheskii . . . institut. Bül-leten', 1932. v. 2, no. 11-12, p. 243-47, 291-95, illus.) Text in Russian and in English. **Title tr.:** Navigation of the Northeast Passage on the ice-breaker *Sibirakov*.

An account, by the scientific leader, of the expedition, which, headed by O. I. Shmidt, succeeded in navigating the route from Arkhangelsk to the Pacific in July-Oct. 1932; V. I. Voronin was captain of the *Sibirakov*. The scientists aboard are named, events of the voyage, damage suffered by the vessel in the Chukchi Sea, and her rescue by the trawler *Ussuriels* are noted; and the scientific results of the expedition mentioned. cf. *Arctic Bibliography*, No. 18780.

Copy seen: DLC.

38099. VIZE, VLADIMIR IUL'EVICH, 1886-1954. Plavaniia "Sibirakova", "Chel'uskina" i "Litke". (In: Lupach, V. S. Russkie moreplavately, 1953, p. 405-415, illus., port., text map) Text in Russian. **Title tr.:** The voyages of the *Sibirakov*, *Chel'uskin* and *Litke*.

Brief account of the establishment of the Northern Sea Route of the U. S. S. R. achieved by the voyage of the ice-breaker *Sibirakov* (Capt. V. I. Voronin) under O. I. Shmidt from Arkhangelsk to Vladivostok in 1932. In 1933 another attempt was made on the *Chel'uskin* which reached the Chukchi Sea, became ice-bound there and was finally destroyed on Feb. 12, 1934, near Cape Vankarem; the crew and scientific personnel aboard were rescued in two months from an ice-floe "Camp Shmidt". The feasibility of the Northern Sea Route was demonstrated in 1934 by the ice-breaker *Litke* (V. I. Vize and Capt. N. M. Nikolaev) which sailed from Vladivostok on June 28, 1934 and came into Murmansk on Sept. 20th. **Copy seen:** DLC; MH.

38100. VLADIMIRSKAIA, M. I. Opyt primeneniia dimetilftalata protiv krovo-sosudchikh nasekomykh v taigae v 1951 i 1952 gg. (Zoologicheskii zhurnal, Nov.-Dec. 1953. t. 32, vyp. 6, p. 1189-92) Text in Russian. **Title tr.:** An experimental use of dimethylphthalate as protection against biting insects in the taiga in 1951 and 1952.

Contains the results of the experimental use of dimethylphthalate against mosquitoes, gnats and black flies in the taiga zone of Kola Peninsula in 1951. This preparation was applied four or five times (in 24 hrs.) and proved to be quite effective although wind, heat and rain reduce the period of usefulness. The experiment was continued in 1952 in the Pechora River valley using mosquito nets treated with a solution of this preparation. The nets were perfectly effective for 18 to 20 days, and retained some protective properties for at least 45 days. A practical suggestion is offered of increasing the length of the nets to cover the shoulders.

VLADIMIRTSOV, BORIS IAKOVLEVICH, 1884-1931, see Akademiia nauk SSSR. Institut istorii nauki i tekhniki. Pamiat . . . Shternberga. 1930. No. 33171

38101. VLADYKOV, VADIM DMITRIJ, 1898- . Taxonomic characters of the eastern North America charrs, *Salvelinus* and *Christivomer*. (Canada. Fisheries Research Board. Journal, Nov. 1954. v. 11, no. 6, p. 904-932, 11 illus., graph, 18 tables) 49 refs.

About 300 specimens were examined in six species: *C. namaycush* (a distinct genus); *S. fontinalis* (subgenus *Baione*); *S. aureolus*, *S. oquassa*, *S. marstoni*, and *S. alpinus*, grouped in a subgenus *Salvelinus*. Among meristic characters, the number of pyloric caeca was found important. Body proportions and meristic characters, such as fin rays and vertebrae, are inadequate to describe a species, but the skull bones, different teeth, and skeleton of the tail are sufficient in themselves to define one. The pearl organs were found only in *C. namaycush* of both sexes.—From author's abstract. **Copy seen:** CaMAI; DI.

38102. VLODAVETS, VLADIMIR IVANOVICH. Ognedyshashchie gory Kamchatki po S. P. Krashenninnikovu. (Akademiia nauk SSSR. Kamchatskaia

vulkanologicheskaiâ stantsiâ. Bûlleten' 1946. no. 12, p. 5-8, illus.) Text in Russian. **Title tr.:** The Fire-spouting mountains of Kamchatka according to P. S. Krasheninnikov.

In commemoration of the 200th anniversary of the end of Krasheninnikov's four-year investigation of Kamchatka (1737-1741) a summary is given, with quotations, of the section of his *Opisanie zemli Kamchatki, 1755* (Arctic Bibliography, No. 9265), referring to Kamchatka volcanoes. **Copy seen:** DLC.

38103. VLODAVETS, VLADIMIR IVANOVICH. Vulkany Sovetskogo Soûza. Moskva, Gos. izd-vo geogr. lit-ry, 1949. 162, 2 p. illus., ports., diags. (1 fold.), maps (2 fold. in pocket). (Iâvleniâ prirody) 20 refs. Text in Russian. **Title tr.:** Volcanoes of the Soviet Union.

Popular outline of volcanoes and volcanic activity in the U.S.S.R. Volcanological investigations in Russia began, author states, with Krasheninnikov's description of volcanoes in Kamchatka but have been carried on systematically only since 1935, when the Academy of Sciences' Volcanological Station was established at Klyuchevskiy Volcano. Thirteen active, nine dormant and the main extinct volcanoes are described, as well as geysers, hot springs and mud volcanoes in Kamchatka (p. 29-104) and on Kurile Islands (p. 104-120). A volcano recently found in the upper reaches of the Moma River (the tributary of Indigirka) is mentioned. Ancient volcanic activity, which covered nearly 3 million sq. km. of the country with lava and tuff is summarized in a diagram (folded in pocket). Notes are included on Kola Peninsula, Karelia, Novaya Zemlya, Kanin Peninsula, New Siberian Islands, Chukotka and other arctic regions. Fold. maps show location of 142 volcanoes in Kamchatka and 86 on Kurile Islands.

38105. VOADEN, D. J. The Russian scene. (Aeronautics, London, Nov. 1954. v. 31, no. 4, p. 63)

Contains brief description of aircraft assisting the Soviet High Latitudes Flying Expedition carried out by staff on Stations (drifting ice floes) North Pole-3 and North Pole-4. The expedition, sponsored by Glavsevmorput, is directed by M. E. Ostrekin, whose flagship is a twin-engined IL-12 transport, uncamouflaged and with the registration SSSR-N440. The registration indicates that the plane is relegated to use in Arctic regions, but indications exist that the aviation division of Glavsevmorput, previously known as *Aviaarktika* is now renamed Polarnaâ Aviatsiâ. USSR-built LI-2s support the expedition as supply planes. They are ski-equipped and fitted with cold-weather cowlings with nine small shutters in the front. A AN-2 biplane on skis and piloted by M. P. Stupishin is used as a communication plane. Also supporting the expedition are LAR-3 helicopters, one of whose pilots is A. F. Babenko; and a civilianized transport PE-8, which is unpainted and bears a civil registration in the N560 series. Aerial commander of the expedition is I. I. Cherevichnyf. Observations on the submarine Lomonosov Range near the North Pole have been made by the expedition. **Copy seen:** DLC.

38108. VODOP'YANOV, MIKHAIL VASIL'EVICH, 1899- . *Mechta pilota*. Moskva, Molodafā gvardiā, 1936. 192 p., port., illus. Text in Russian. 2d. edition: 1937; 168 p. port. (no illus.) *Title tr.:* The pilot's dream.

Autobiographical novel about a Soviet pilot who dreamed of an airborne expedition to the North Pole, and who in cooperation with an academician and with the aid of the government succeeded in realizing his dream in 1939. The novel, based on experience of author's arctic flights, anticipated to some extent the plan of the Soviet polar expedition of 1937-1938: Preface to the second edition tells us that the author's dream came true and he reached the North Pole one year earlier than the hero of his novel.

38119. VOLURSUS, *pseud.* Magadan, eine Bedrohung für die Vereinigten Staaten? (Flugwelt, Mar. 1954, Jahrg. 6, no. 3, p. 71-72, 2 maps) Text in German. *Title tr.:* Magadan, a menace to the United States?

During the World War II, Magadan, formerly a small fishing village on a good harbor, became important as a port of entry into the U.S.S.R. for American lend-lease goods. In the post-war period its significance increased as it became a new center of industry. Several important plants, three permanent air fields (two with 1,800 m. runways) and one winter ice air field have been established there. Atomic units under General Lieutenant Kapitsa, the headquarters of the so-called arctic division and other military forces, also an air-training school are located there. The air forces at Magadan are said to be under the long-range air fleet headquarters in Khabarovsk. Two small sketch maps indicate (1) favorable situation of Magadan for attack upon the United States, and (2) location of air fields.

38120. VOLURSUS, *pseud.* Die Stützpunkte der sowjetischen Langstreckenbomberwaffe am Nordpol. (Flugwelt, Nov. 1954, Jahrg. 6, Nr. 11, p. 334-38, illus. incl. 2 maps) Text in German.

Title tr.: Bases for Soviet long-range bomber forces around the North Pole.

Contains an analysis of Soviet air potential stationed along the arctic seacoast, arctic islands and the Pacific coast. The network of 150 to 200 airfields, bases, rocket launching sites, supply stations, radio and radar stations is depicted. Extensive development of Soviet arctic territory including engineering projects, scientific exploration, and the role of Glavsevmorput (Main Administration of the Northern Sea Route) is related to the Soviet air war potential. Some deficiencies cited include the lack of sufficient long-range aircraft,

development lags in radar and navigation techniques, and the absence of a strong ground maintenance service for the striking force envisioned. Soviet aircraft types deployed for polar action and special cold-weather training received by flight personnel are described.

38127. VRANGEL', FERDINAND PETROVICH, Baron, 1796-1870. Puteshestvie po severnym beregam Sibiri i po ledovitomu moriu, sovershennoe v 1820, 1821, 1822, 1823 i 1824 g. g. ekspeditsiei pod nachal'stvom flota letenanta F. P. Vrangela. Pod red. E. Shvede. Moskva, Izd-vo Glavsevmorputi, 1948. 455 p., ports, illus., maps (3 folded.) Text in Russian. **Title tr.:** Expedition along the North Siberian coast and in the Arctic Sea during the years 1820-1824, under command of Navy Lieutenant F. P. Vranghel'. E. Shvede, editor.

New one-volume edition of the work first published (in 3 vols.) in 1841 (*Arctic Bibliography*, No. 19001). Of the 14 appendices in the first edition, 11 are omitted here, among them all tabular meteorological data, lists of geographic coordinates, and the Chuvantsy-Omok vocabulary. This new edition, however, is extensively illustrated with recent photographs, also reproductions of old pictures (some hitherto unpublished), and maps. The text (p. 45-342)—Vranghel's narrative of his journey across Siberia to the Kolyma region, exploration and survey of parts of the coast of Yakutia—is supplemented by a glossary of ethnological and local terms, compiled by M. A. Sergeev (p. 431-41), by indexes of geographic and personal names; also by the following papers, each of which, except the fifth one, is abstracted in this Bibliography under its author's name:

OSTROVSKIĬ, B. G. F. P. Vranghel', 1796-1870; ocherk zhizni i deiatel'nosti (F. P. Vranghel', 1796-1870; outline of his life and activities), p. 7-30.

DAVYDOV, I. V. F. F. Mat'ushkin, 1799-1872; ocherk zhizni i deiatel'nosti (F. F. Mat'ushkin, 1799-1872; outline of his life and activities), p. 31-41.

VRANGEL', F. P. O sredstvakh dostizheniia pol'usa (On the means of reaching the North Pole), p. 343-46.

MAT'USHKIN, F. F. Pis'ma F. F. Mat'ushkina iz Sibiri (The letters of F. F. Mat'ushkin from Siberia), p. 347-403.

Zhurnal puteshestviia po tundre k vostoku ot Kolymy letom 1822 g. (Diary of the journey in the tundra eastward from the Kolyma in summer 1822), p. 404-407. The diary of F. F. Mat'ushkin, recently discovered in the archives of the Russian Academy of Sciences, proved to be a draft of the chapter 7 in

the second part of the Vrangeli' book. A few excerpts not included in the book, are printed here: they refer to the general character of area between the Kolyma River and Cape Shelag'skiy meridian, and to conversation with a Chukchi, who revealed to Mat'ushkin the existence of a then unknown land to the north (Vrangeli Island).

SERGEEV, M. A. *Ékspeditsiia F. P. Vrangeli i F. F. Mat'ushkina i izuchenie mal'kh narodov Krafnego Severo-Vostoka* (Expedition of F. P. Vrangeli' and F. F. Mat'ushkin and investigation of small nations of the far Northeast), p. 411-430.

Diel'stviia Vostochno-Sibirskago Otdela; (supplement to its: Izvestiia, 1897, t. 28, no. 3, p. 1-22) Text in Russian. Title tr.:* Activities of the East Siberian Section; minutes of meetings of the Executive Committee.

Includes (p. 10-13) *précis* (only) of reports given at the meeting of Oct. 25,

1896 by I. I. Mal'nov and N. L. Gekker: members of the Yakutia expedition; materials collected on the anthropology and demography of Yakuts, Tungus and Russians in Yakutia were reported, and plans presented for publication. S. A. Iastremskii reported on his materials on the Yakut language and folklore, and made proposals for work in linguistics. A letter from É. K. Pekarskii on his work was read.

38131. VSESOIŪZNOE OBSHCHESTVO KUL'TURNOI SVIAZI S ZAGRANITSEI (VOKS). In the Central Arctic. (*Ils:* Bulletin, Nov.-Dec. 1954, no. 6, p. 84-85, illus.)

Brief notes on the Soviet High Latitudes Expedition in 1954, headed by V. Burkhanov: landing of drifting stations "North Pole-3" and "North Pole-4" wintering parties, their equipment, prefabricated huts on runners, and tents; the personnel, everyday work and relaxations, regular communication with the mainland. Photographs show aerologists at work and a general view of "North Pole-3." **Copy seen:** DLC.

38132. VUL'F, T. E., and K. K. KHAZANOVICH. Lovchorrit, loparit i eŭdialit Khibinskikh i Lovozerskikh tundr kak istochnik redkikh zemel' i metallov. (Priroda, 1935, no. 3, p. 60-63, text map) 12 refs. Text in Russian. **Title tr.:** Lovchorrite, loparite and eudialite of the Khibiny and Lovozero tundras as sources of rare earths and metals.

Contains notes on the history of the discovery, physical and chemical characteristics, character of formation and association, distribution and uses of lovchorrite (related to rinkolite), loparite, and eudialite (zirconosilicate) found in these tundras of central Kola Peninsula. These minerals are valuable as sources of rare earth and such rare metals as tantalum and niobium (in loparite) used in industry. Their reserves and prospecting and uses are discussed.

38133. VYSHEMIRSKIĬ, V. S. Verkh-nepaleozolskie i mezozolskie oblasti razmyva i osadkonakopleniia tsentral'noi ĭakutii. (Akademiia nauk SSSR. Doklady, Oct. 11, 1954. nov. ser., v. 98, no. 5, p. 821-23) 5 refs. **Title tr.:** Upper Paleozoic and Mesozoic areas of erosion and deposition of sediments in Central Yakutia.

Paleogeographic discussion of origin of sediments deposited in the upper Yana River basin. On the basis of earlier investigations and on his own exploration, the author reaches the conclusion that erosion of the Aldan plateau was the source of the sediments in Jurassic and lower Carboniferous time, and the erosion of the hypothetical ancient plateau "Beringiya", formed by elevation of the northwestern part of the Okhotsk Sea bottom, and an ancient

plateau south from the present Verkhoyanskiy Range supplied material for sediments in Permian and upper Carboniferous time. **Copy seen:** DLC.

Contains "a complete list of the mosses and lichens" collected in June 1928 from an area of about 10 square miles, near Isersiutilik (64°40' N. 51°20' W.) by the Oxford University Expedition.

Copy seen: DSI-M.

38139. WADE, FRANKLIN ALTON, 1903- . Greenland inland ice weather stations. (Encyclopedia Arctica [unpub.] v. 7, Meteorology and oceanography, July 1951. pt. 11, illus.)

"Attempts made to establish inland ice stations to supplement coastal stations are presented. A German expedition established an icecap station, Eismitte, near the geographic center of Greenland where weather records were kept for 1 yr. A British expedition established a station 270 mi. south of Eismitte the same year. Both stations were abandoned due to hardships. The U. S. Army Air Forces Ice Cap Detachment established inland bases in 1943-44. A not-too-difficult trail through the marginal zone was found and used successfully. New types of over-snow mechanized vehicles can transport the great quantities of equipment and supplies from coast to station sites on the inland ice. Such transportation makes possible the erection of heavy, adequate and comfortable buildings anywhere on the icecap and the installation of practical inland ice stations."—SIPRE.

Contains description of the Skaergaard igneous complex on Skaergaards Halvø in the Kangerdlugssuaq fiord region of East Greenland (68°10' N. 31°40' W.); with note of information gained since the author and W. H. Deer's extensive study pub. in 1939 (*Arctic Bibliography*, No. 19034). Rocks of the layered series show cryptic layering, rhythmic layering, and a parallelism of those minerals which have a platy or bladed habit. These features are discussed and comparisons made with the Bushveld (South Africa) and other igneous complexes in Montana and western Scotland. Textural features of layered rocks and the mechanism of layered intrusions are discussed.

38144. WAHRHAFTIG, CLYDE ADOLPH, 1919-. Observations on rock glaciers in the Alaska Range. (Geological Society of America. Bulletin, Dec. 1954. v. 65, no. 12, pt. 2, p. 1353)

Describes rock glaciers occupying cirque floors and alpine valleys in the Alaskan Range. Suggests that they arise in permafrost regions from talus so thick that its weight forces interstitial ice to flow. Believed to be forerunners of a new ice glaciation in semi-arid regions.

Copy seen: DLC.

38145. WAHRHAFTIG, CLYDE ADOLPH, 1919-, and J. H. BIRMAN. Stripping coal deposits on Lower Lignite Creek, Nenana coal field, Alaska. Washington, D. C., 1954. 11 p. 6 maps (5 fold.), 2 tables. (U. S. Geological Survey. Circular 310) 3 refs.

Investigation was made, June 25-July 15, 1952, of coal deposits in a 24 sq. mi. area extending from Nenana River about six miles up Lignite Creek (approx. 63°55' N. 149° W.). The Tertiary coal-bearing formation, unconsolidated sediments, and structure of the region are described. Stripping-coal reserves are estimated at about 95 million tons. Analyses of samples show a heating content of 7,500-8,200 Btu, an ash content of six to 14 percent, and moisture content of 25 percent. Nature of the overburden, source of water for hydraulic mining, disposal of debris, and landslide problem in Lignite Creek valley are discussed.

38147. WALES, GEORGE. Sub zero operations. (American helicopter, Aug. 1947. v. 7, no. 9, p. 22-23, 30, illus.)

Contains description of functional suitability tests of the R-5 D helicopter for operation and rescue work in extremely low temperatures. The tests were made from Alaskan bases in conjunction with the U. S. Army's Task Force Frigid test of personnel and equipment. Operation was found unsatisfactory below -35° F., although the helicopter was flown at temperatures to -56° F. Navigation instruments (standard magnetic and gyro compasses) functioned satisfactorily. A litter capsule mounted on either side was used in the successful removal of a patient from an area covered by 30 inches of soft, dry snow. Hovering pickups were made over all types of terrain including snow-covered, clear, and tree-covered areas. The pilot felt a tendency toward dizziness when hovering over white unmarked areas.

WALFORD, NAOMI, see Kokko, Y. Way of four winds. 1954. No. 35647

38148. WALKER, EDMUND MURTON, 1877-. The Odonata of Canada and Alaska, v. 1. pt. 1: general; pt. 2: the Zygoptera-Damselflies. Toronto. University of Toronto Press, 1953. xi, 292 p., 44 plates. 192 refs.

Contains in pt. 1 (p. 3-57), data on external structure of adult dragonflies of the suborder Zygoptera (damselflies), and nymphs of Anisoptera and Zygoptera, their life history and habitats (ponds, lakes, streams and saline habitats), habits of adults, developmental stages, enemies and parasites. In pt. 2 (p. 59-278) are keys to the suborders, families and species (male, females, nymphs); descriptions of families, genera and 51 species native to Canada and Alaska are given, with synonyms, measurements, variations, data on habitat, range and distribution in Canada, also field notes. At least six species native to Alaska and northern regions of Canada are included, the work is to be continued. *Copy seen:* MH-Z.

38149. WALKER, ERNEST PILLSBURY, 1891- . Bird fatalities resulting from a shipwreck. (Condor, Jan.-Feb. 1922. v. 24, no. 1, p. 26-27)

Contains observations on many murrens and gulls dead and dying on the beaches, saturated with crude oil resulting from the wreck of the Canadian Pacific steamer *Princess Sophia* on Vanderbilt Reef, Lynn Canal, Alaska, Oct. 25, 1918. Other notes with the same title in *Condor*, 1920, v. 22, p. 157.

Copy seen: DSI; MH-Z.

38150. WALKER, ERNEST PILLSBURY, 1891- . The Kittlitz murrelet in southeastern Alaska. (Murrelet, 1922. v. 3, no. 2, p. 9-10).

Contains notes on the life habit and local distribution of *Brachyramphus brevirostris* first observed on Aug. 3, 1921, in the tide rips near the middle of Glacier Bay, southeastern Alaska; some data on the nesting of this bird was collected from the Indians living in the region.

Copy seen: DSI; MH-Z.

38154. WALLACE, ROBERT CHARLES, 1881-1955. Rae of the Arctic. (Beaver, Mar. 1954. Outfit 284, p. 28-33, illus., ports., text map)

Short biography of Dr. John Rae, 1813-1893. After graduating in medicine from Edinburgh University in 1833, he served the Hudson's Bay Co. as clerk and surgeon at Moose Factory (northern Ontario) until 1844. His explorations for the Company between 1846 and 1854 along the arctic coast of Mackenzie and Keewatin Districts and Victoria Island, primarily in search of the Franklin Expedition, are described. His activities after retirement from the Hudson's Bay Co. in 1856, are noted, and his personality and skills appraised.

Contains a study of atmospheric spore counts in Winnipeg and throughout the

province. They followed the same seasonal fluctuation and pattern of composition but were less numerous in amount north of, and more abundant south of Winnipeg. **Copy seen:** DSG.

38157. WALTON, E. W. K. Method of carrying provision boxes on sledges. (Polar record, Jan. 1954. v. 7, no. 47, p. 83)

Contains reply to article by A. Reece on sledges of the Norwegian-British-Swedish Antarctic Expedition, 1949-1952 (*Arctic Bibliography*, No. 31579). Author states that standard-size boxes should straddle the outer longitudinals of the sledges, not fit between them. Wooden chocks nailed to the bottoms of the boxes will prevent shifting on rough terrain. **Copy seen:** CaMAI; DLC.

38158. WARD, WILLIAM H., and P. D. BAIRD. Studies in glacier physics on the Penny Ice Cap, Baffin Island, 1953. Part I. A description of the Penny Ice Cap, its accumulation and ablation. (*Journal of glaciology*, Apr. 1954. v. 2, no. 15, p. 342-55, illus., 2 text maps, profiles, graphs, 2 tables) ref.

A brief outline and chronology of the glaciological program is presented. The Penny Icecap (approx. 67°06' N. 65°42' W.) has an area of about 5900 sq. km. and rests on a 2000 m. high mountain range. Ten outflowing glaciers are of major significance. A series of bamboo stakes was established and pits were dug to measure the relative level of the snow surface and the varying density of the settled snow, and to record the snow profile. The progress of snow accumulation and ablation and the net annual loss or gain of water at various altitudes are recorded. The firn line is at about 1550 m. A general increase in the extent of glaciation 150 to 200 years ago was followed by a retreat beginning about 50 years ago and still notably in progress. **Copy seen:** DGS; DLC.

Construction and use of ice-boring equipment taken on the 1953 Baffin Island Expedition of the Arctic Institute of North America are described in some detail. A total of 250 ft. (75 m.) of boring, mostly in dense ice, was carried

out on the Penny Icecap, the deepest hole being 60 ft. (18 m.). Ice temperature varied down to -14° C. Using this equipment (total weight 80 lb. or 36 kg.) two men could bore to a depth of 150 ft. (45 m.) in dense ice by hand.

38160. WARING, GERALD ASHLEY, 1883- Core drilling for coal in the Moose Creek area, Alaska. Washington, D.C., U.S. Govt. Print. Off., 1934. ii, 155-66p., 5 maps (4 fold.). (U.S. Geological Survey. Bulletin 857-E. Mineral resources of Alaska, 1932)

Presents the results obtained in the Government core drilling operations in 1932, in charge of the author, in the Moose Creek area of the Matanuska coalfield in south-central Alaska. Describes the location of the area and the events leading to the undertaking of this project. Under geology are described the stratigraphy and structure of the area, and the correlation of the drill holes. Coal developments in the area are given, the quality of the coal, with analyses, is discussed, and the core-drilling operations and results described. No coal seams of workable thickness are encountered in the drilling. **Copy seen:** DLC.

38169. WASHBURN, HENRY BRADFORD, 1910-. Mount McKinley: aerial photograph by Bradford Washburn. (Pacific discovery, May-June 1953. v. 6, no. 3, p. 16-17)

Contains double spread photograph of central part of Mt. McKinley National Park with the peak 70 miles away. The picture was taken looking westward from an altitude of 10,000 ft.

Copy seen: DLC.

38170. WASHBURN, HENRY BRADFORD, 1910-. On-the-spot photographs expedite Mount McKinley survey. (Civil engineering, Feb. 1954. v. 24, no. 2, p. 58-59, illus.)

Contains description of photographic technique used by Boston Museum of Science survey parties working since 1947 in the Mt. McKinley massif. Photographs taken by Polaroid hand camera and developed on the spot, could be quickly and clearly labeled after mounting with adhesive tape in angle-book. The need for field sketching is thus minimized. The technique rendered possible the taking of directions and eleva-

tions on many obscure points, and instrument work could be started as soon as the theodolite was leveled.

The author visited the Rampart and Hot Springs districts in central Alaska with J. B. Mertie, Jr., in 1931; he collected and later studied his own and others' samples of concentrates from the gold placer mines of the region. He describes briefly the geography and geology, then in detail, more than 40 samples of gold placer concentrates from the region, listing the mineral composition of each sample. He describes also the tin ore from the gold placers and discusses its origin.

38178. WAYLAND, RUSSELL GIBSON, 1913- . Gold deposits near Nabesna. (In: U. S. Geological Survey. Mineral resources of Alaska, 1940. Bulletin, 1943, no. 933-B, p. 175-95, 6 illus. on 3 plates, 2 maps incl. 1 fold., diagr.) Previously listed as part of *Arctic Bibliography*, No. 11588.

Presents the results of a field study by the author in 1940 of the gold properties of the Nabesna Mining Corporation (approx. 62°25' N. 143°02' W.) on White Mountain west of the Nabesna River between Jack and Jacksina Creeks, near Nabesna in southeast-central Alaska. Refers to previous investigations of the area. Gives the mining history of the region, describes the geology, and discusses the contact metamorphism and contact metamorphic minerals of the deposit. The ore deposits are described in detail, and data given on the mining and milling operations. The orebodies were deposited as a late phase of the intrusion of quartz diorite into Upper Triassic limestone with intense contact metamorphism of the limestone, followed by the deposition of the pyritic gold ore of the deposit.

38180. WEAVER, JOHN C. The ice of seas in the North American Arctic. (Encyclopedia Arctica [unpub.]. v. 7, Meteorology and oceanography, July 1951. pt. 12) refs.

"Fast ice, drift ice, and arctic or polar pack ice are the three major ice types of the northern seas. The polar pack occupies 70 percent or 2,000,000 sq. mi. of the north polar basin and varies in thickness from seven to 100 ft. Fields and floes break loose from the central polar ice mass in the slow revolution of ice about the pole, and are discharged southward to the North Atlantic along the eastern coast of Greenland and the northeastern coast of North America. The eastern Greenland pack discharges 3000 to 4300 cu. mi. of ice/year, and is characterized by *storis*. The north-eastern North American pack travels at an average speed of 12.5 mi./day, 30 percent is of arctic ice origin, 60 percent originates in Baffin Bay and Davis Strait where about 7500 icebergs are produced annually. The movements of this pack and its threat to navigation are discussed. Ice conditions of the Hudson Bay and Strait, the Northwest Passages and the Arctic Seas of Alaska are discussed. The Alaskan waters north and east of Bering Strait are dominated by the movements of the polar pack; heavy fast ice covers the bays and fringes the shores of northern Alaska for 10 or more months per yr. Icebergs do not menace navigation along the western margin of the continent."—Sipre.

Contains account based on published Russian material.* An historical outline of expeditions to the central Arctic between 1937 and 1950 is given. The 1954 expedition, undertaken by the Soviet government and directed by V. F. Burkhanov, consisted of two drift stations (central Arctic station directed by A. F. Treshnikov, eastern Arctic by E. I. Tolstikov), "The High Latitudes Air Expedition" (under M. E. Ostrekin), and regular meteorological and ice observation flights of "flying laboratories" along the edge of the expedition area. Expedition started in Mar. 1954. Establishment on the ice pack of drift stations North Pole-3 and North Pole-4, their living conditions and equipment are described, with illustrations. The air expedition made about 12 landings in the North Pole region and completed its work in July 1954. Little is known of

the meteorological flights. Personnel connected with the expedition are listed. An outline of scientific results in oceanography and hydrography (with description of the Lomonosov Range and other topographic features of the Arctic Basin floor), distribution and drift of ice, meteorology, and terrestrial magnetism is given.

38190. WEBSTER, JACKSON DAN, 1919- . Where is the marbled murrelet in early summer? (Wilson bulletin, June 1941. v. 53, no. 2, p. 124)

Contains observations on *Brachyramphus marmoratus* made in 1940 at Sitka, Alaska, from Feb. 28 to Aug. 24 when the first juvenile was collected.

Copy seen: DSI; MH-Z.

38191. WEDOW, HELMUTH, Jr., 1917- , and others. Reconnaissance for radioactive deposits in east-central Alaska, 1949. Washington, D. C., 1954. 21 p. 6 maps (2 fold.), 11 tables. (U. S. Geological Survey. Circular 335) 26 refs. Other authors: J. M. Stevens, G. E. Tolbert, and M. G. White.

Contains reports of investigations in summer 1949, in: the Fairbanks and Livengood quadrangles, central Alaska; Miller House - Circle Hot Springs area (about 100 miles northeast of Fairbanks); and Eagle (Copper Creek copper lode prospect) and Fortymile districts (Wilson Creek, My Creek, Ben Creek, and Chicken Creek areas) both on the

Alaska-Yukon boundary east of Fairbanks. Geology and radioactivity studies are briefly described for each region and analyses of samples are given in tables. No commercial sources of uranium were found, but additional reconnaissance seems warranted in some areas. **Copy seen:** DGS.

38192. WEDOW, HELMUTH, Jr., 1917- , and others. Reconnaissance for radioactive deposits in eastern interior Alaska, 1946. Washington, D. C., 1954. 36 p. 10 text maps, diagr., 2 tables. (U. S. Geological Survey. Circular 331) 25 refs. Other authors: J. J. Matzko, P. L. Killeen, and M. G. White.

Investigations were conducted along sections of the Elliott, Steese, Richardson, Tok Cutoff, and Alaska Highways in the Tanana and upper Copper River valleys in June-Sept. 1946 by a three-man party (led by H. Wedow), and in the Grant Creek area west of the town of Tanana (approx. 66° N. 153° W.) in Aug. by a three-man party (led by P. L. Killeen). On the highway sections, direct testing of outcrops was made by portable survey meter. Geology and radioactivity studies are described for each area, and extensive data on the radioactivity tests are presented in tables. No important sources of uranium were found. **Copy seen:** DGS.

38193. WEDOW, HELMUTH, Jr., 1917- . Reconnaissance for radioactive deposits in the Eagle-Nation area, east-central Alaska, 1948. Washington, D. C., 1954. 8 p. 2 maps (1 fold.), 3 tables. (U. S. Geological Survey. Circular 316) refs.

Reconnaissance for uranium deposits along the Yukon River northwest from the international boundary (approx. 64°45'-65° N. 141°-142° W.) was carried out June-Sept. 1948 by a four-man U. S. Geological Survey party led by the writer. The sedimentary rocks of Proterozoic and Paleozoic age and granite of Mesozoic(?) age are described, with notes on radioactivity encountered. None of the rocks contained more than 0.003 percent equivalent uranium, except for black shale beds in the upper Mississippian Calico Bluffs formation and Mesozoic(?) granite and its derivatives, where percentages ranged from 0.003 to 0.022. Analyses of samples are given in tables. **Copy seen:** DGS.

38194. WEEMS, PHILIP VAN HORN, 1889- . Air navigation. 4th ed. Annapolis, Md., Weems System of Navigation, 1955. 473 p. 192 illus. diags. 37 refs. First pub. 1931 (602 p.); 3d. ed. (418 p.) pub. 1943 with out-of-date material eliminated; in this, the 4th ed. meteorology is excluded, six new chapters are added, and the others completely revised: 80 percent new material.

This edition was planned for practical long-range navigation, stressing electronic and celestial navigation. It includes chapters on charts, magnetism and compasses, air pilotage, dead reckoning, radio and omniranges, radar, pressure pattern flying, celestial navigation, etc.

Chapter 15 (p. 348-70) "Polar Navigation" treats polar maps and charts, grid navigation and direction, position fixing, polar star altitude curves computer, twilight, directional gyro steering, and some practical aspects of polar flying. Excerpts from Charles F. Blair, Jr.'s own account of his solo flight over the North Pole in 1951 enroute non-stop from Bardufoss, Norway to Fairbanks, Alaska in a P-57 are included in the chapter on celestial navigation (p. 345-47), emphasizing the navigational methods used.

38195. WEEMS, PHILIP VAN HORN, 1889- . High speed celestial navigation in the polar regions. (United States Naval Institute. Proceedings, July 1952. v. 78, no. 7, p. 780-83, illus.)

Contains brief discussion of a celestial computer for the polar regions proposed by T. C. Lyon (cf. *Arctic Bibliography*, No. 30591) which extends the principle of the Star Altitude Curves developed by the writer. The device may be used with any star or with sun, moon, or planets. Templates for each of the selected stars or other astronomical bodies are fitted over or under a stereographic projection of the polar regions. The adjustment of the templates is described. The method is fast (requiring no computation or plotting), it results in an immediate position on the navigator's working chart, it is accurate, and universal.

38196. WEILING, FRANZ. Adventivpflanzen der Lapplandfront. (Suomalainen eläin ja kasvitieteellinen seura Vanamo. Kasvitieteellisiä julkaisuja, Osa 20, 1944-45, pub. 1944. Kasvitieteellisiä tiedonantoja ja kirjoitelmaa, 15, p. 51-52) **Title tr.:** Adventive plants on the Lapland front.

Contains a simple list of 37 species of flowering plants, very rare in Finland. They were found in the vicinity of horse stables, near Kantalahti (Salla, Kuusamo) The seeds of these plants were probably brought with horse fodder from Germany during the war of 1939-45.

Copy seen: DLC; MH-F.

38197. WEIR, THOMAS. Camps and climbs in arctic Norway. London, Cassell, 1953. 87 p. 58 illus. on plates, 4 text maps.

Popular account of mountain climbing (by the author and two companions) in the Lofoten Islands and Lyngen Peninsula north of Tromsø; with many excellent photographs.

Copy seen: DLC.

38198. WEISS, A. KURT. Adaptation of rats to cold air and effects on tissue oxygen consumption. (American journal of physiology, May 1954. v. 177, no. 2, p. 201-206, illus., tables) 26 refs.

Six-week-old animals exposed to cold ($5 \pm 1^\circ \text{C}$.) showed an increase in tissue oxygen consumption, excepting the brain cortex; tissues of six-month-old exposed rats showed no increase in metabolic rate, the liver excepting. After cold exposure of ten days, six-weeks-old rats showed still high tissue O_2 consumption after two days' sojourn in room temperature. The behavior of weanlings, condition of the adrenal, etc., are also described.

Copy seen: DLC.

38199. WEISS, A. KURT. Adaptation of rats to cold air and its effect on tissue

oxygen consumptions. (Federation proceedings. Mar. 1953. v. 12, no. 1, pt. 1, p. 152)

Contains a study on the participation of representative tissues in the total metabolism of cold-exposed rats. When compared with controls, liver slices of exposed animals showed a 40 percent increase in O_2 metabolism; heart slices a 23 percent increase; diaphragm 20 percent and kidney cortex 11 percent increase. These increases were manifest for two days after the animals were removed from the cold environment ($5^\circ C.$) in which they stayed ten days.

38200. WEISS, GOTTFRIED, 1911- . Beobachtungen und Erfahrungen auf den deutschen Ostgrönland - Expeditionen 1942/43 und 1944. (Polarforschung, 1952, pub. 1954. Bd. 3, Heft 1-2, Jahrg. 22, p. 162-68) Text in German. *Title tr.:* Observations and experiences during the German East Greenland Expeditions 1942-43 and 1944.

Contains report, based on author's memory, of meteorological, geological and morphological observations made as a member of the German Naval Meteorological Service in northeastern Greenland. Flight observations made from Traill Ø to Besselfjord, and ice conditions encountered near $74^\circ 40' N.$ $6^\circ 30' W.$ are described. Tidal observations were made near Sabine Ø, and water temperature measurements made shortly before and after ice formation yielded a daily reading of $-1.8^\circ C.$ without variation. The occurrence of stone rings on Sabine Ø is relatively rare; glacial striations were seen near Eskimonaes. Radio communication between East Greenland and Tromsø was best in mid-winter and between five and seven p. m.; that between Tromsø and Spitsbergen between noon and one p. m. *Copy seen:* DLC.

Contains discussion of a case with a history of the calcareous deposits, their distribution, origin, etc.

Copy seen: DSG.

38203. WELCH, PAUL SMITH, 1882- . Snow-field and glacier Oligochaeta from Mt. Rainier, Washington. (American Microscopical Society. Transactions, Apr. 1916, v. 35, no. 2, p. 85-124, plates 14-17) 10 refs.

Contains a synopsis of 20 species and two varieties of oligochaetous worms of the genus *Mesenchytraeus* recorded from North America, including 14 occurring in Alaska and the Aleutian Islands. A detailed morphological and anatomical study is given of *M. gelidus* n. sp. and *M. solifugus rainierensis* n. var., both collected on Mt. Rainier, State of Washington. The new variety is compared with *M. solifugus*, a snow-worm, described from the specimens from Malaspina, Muir and La Pouse Glaciers in Alaska.

38204. WELLEIN, EDWARD G., and W. NEWCOMB. Aerial waterfowl breeding ground explorations in sections of the far North. (In: U. S. Fish and Wildlife Service. Waterfowl populations and breeding conditions, summer 1953, pub. 1954. Special scientific report: Wildlife no. 25, p. 16-19, text map, table)

Area covered by the authors included Great Slave Lake region, Thelon and Back Rivers (Keewatin District), and Southampton Island. During the flights, information on waterfowl was recorded on one-fourth mi. transect basis. Numbers and varieties of ducks and geese per sq. mi. for each transect are tabulated.

Weather and water conditions, beluga, caribou, murre, and musk oxen observed, are noted. **Copy seen:** DF; DLC.

38205. WELLS, HARRY WARREN, 1907- . Polar radio disturbances during magnetic bays. (Terrestrial magnetism and atmospheric electricity, Sept. 1947. v. 52, no. 3, p. 315-20, 4 fig.) 4 refs.

"Comparison of ionospheric and magnetic records at College Observatory, College, Alaska, shows very definite ionospheric effects during magnetic bays. High absorption producing partial to complete radio blackouts was coincident with each of 69 significant magnetic bays which were examined for the period January to September 1942. The radio absorption is limited to duration of the magnetic bay, thereby establishing a direct relationship which is unusual in magnetic ionospheric investigations." Graphs showing magnetic bays and coincident polar radio blackouts, ionospheric records of high absorption and typical occurrences of magnetic bays at College are included. Both the magnetic and radio effects are explained on the basis of the development of intense ionization in the ionosphere below the normal E-layer. Ionization producing polar blackouts is attributed to particle bombardment which appears to have a lag of one day or more from sun to earth. It is deduced that current-systems in arctic regions are probably concentrated at levels below 80 kilometers. **Copy seen:** DLC.

38206. WENDT, HERBERT, 1914- . Entdeckungsfahrt durchs Robbenmeer; Georg Wilhelm Stellers Reise ans "Ende der Welt". Stuttgart, Franckh'sche Verlagshandlung, 1952. 173 p. illus., 4 plates, maps. 15 refs. Text in German. **Title tr.:** Voyage of discovery across the seal sea; Georg Wilhelm Steller's journey to the "End of the World."

A popular biography of Steller, 1709-1746, by a zoologist, who in studying the literature on the sea otter was struck by Steller's personality and his contribution to science. Steller's part in Bering's Great Northern Expedition, his travels and adventures in Siberia and Kamchatka, and his voyage on the *Sv. Petr* from Kamchatka to Alaska and back in 1741-1742 are recounted. A chronology of northeastern Asia and the North Pacific area, from the conquest of Siberia by Ermak (1581) to 1926, is appended (p. 166-71). *Map* (p. 115) shows routes of

Steller's and other Russian voyages in the North Pacific. **Copy seen:** DLC.

38207. WERNER, G., and F. HOB. BIGER. Über die Temperaturabhängigkeit der Galvanonarkose bei Fröschen. (Experientia, Oct. 1948. v. 4, fasc. 10, p. 405-406, illus. tables) 5 refs. Text in German. Summary in English. **Title tr.:** On the temperature dependence of galvanonarcosis in frogs.

Contains a study on the relation between the dose of threshold currents and temperature (5° to 33° C.); also the dependence of recovery time after galvanonarcosis upon temperature.

Copy seen: DLC.

38208. WERTHEIMER, ERNST, and others. *In vitro* demonstration of metabolic changes during heat regulation in rats. (Biochemical journal, Feb. 1954. v. 56, no. 2, p. 297-302, tables) 13 refs. **Other authors:** Victoria Bontor, and M. Wurzel.

Contains a description of metabolic changes in the diaphragms of rats kept for a brief period in cold or warm environment. Glycogen synthesis and analysis; glucose utilization; O₂ utilization, etc., were studied and compared in the two groups. **Copy seen:** DSG.

38209. WERTHEIMER, ERNST, and V. BONTOR. Metabolic changes in the rat diaphragm during heat regulation, as a thyroxine effect. (Metabolism: clinical and experimental, Nov. 1953. v. 2, no. 6, p. 536-45, tables) 9 refs.

Contains account of varied experiments with rats aimed to establish whether the metabolic changes found in diaphragms following cold exposure are associated with increased thyroid activity. It is concluded "that the cold effect on diaphragm metabolism is a thyroid effect;" its modes of activity, and their measurement are discussed. **Copy seen:** DSG.

38210. WEST, WALTER SCOTT, 1912- . Reconnaissance for radioactive deposits in the lower Yukon-Kuskokwim region, Alaska, 1952. Washington, D. C., 1954. 10 p. 4 maps (2 fold.), 4 tables. (U. S. Geological Survey. Circular 328) 6 refs.

Investigation of radioactivity in a metazeunerite occurrence in the Russian Mts. (61°40' N. 159°08' W.) and southern Kaiyuh Mts. (63°58' N. 158° W.) were made in July-Aug. 1952 by the writer and G. M. Haselton. The geology,

prospecting localities, and the radioactivity and mineralogic studies carried out are briefly described for each location. Analyses of samples are given in tables. No commercial uranium deposits were found, but a more thorough examination of the Russian Mts. area might be made. **Copy seen:** DGS.

WEST, WALTER SCOTT, 1912-, see also Nelson, A. E. Reconnaissance for radioactive deposits in eastern Alaska, 1952. 1954. No. 36429.

38211. WESTERBERG, GÖSTA, 1886-, and **K. J. P. WITROCK.** L'aménagement hydro-électrique de Harsprånget, en Suède. (Le monde souterrain, Aug.-Oct. 1954. année 19, no. 84/85, p. 1211-1214, illus., 5 diags.) Text in French. **Title tr.:** The harnessing of Harsprånget, for hydro-electric power in Sweden.

The power station at Harsprånget Falls on the Lule River (66°52' N. 19°49' E.) is the second and most important in a series of seven being constructed between Lulejaure (lake) and the Gulf of Bothnia. The most northerly station is Porjus which started service in 1915. Construction and costs of the dam and plant and the internal arrangement, machinery, etc., of the plant are described in some detail, with estimates of power to be generated.

Copy seen: DGS.

38212. WESTERN MINER. The amazing Giant. (Western miner, Oct. 1951. v. 24, no. 10, p. 100-102, 2 illus.)

Contains survey of production statistics, mining operations, construction, and staff during the fiscal year ending May 31, 1951, at the Giant mine of Giant Yellowknife Gold Mines, Ltd., Mackenzie District. By the end of 1951, the mill should treat 700 tons of ore daily, with the ultimate objective of 2,000 tons daily. During the fiscal year the company produced 111,497 oz. gold and 35,039 oz. silver.

Copy seen: DGS.

38213. WESTERN MINER. The B. C. — Yukon power project. (Western miner, Aug. 1954. v. 27, no. 8, p. 74-78, text map)

Watersheds to be developed extend north for 200 mi. from Atlin Lake in northern British Columbia to the junction of the Yukon (Lewes) and Big Salmon Rivers north of Whitehorse in southern Yukon Territory, and for 300

mi. in an east-west direction. More than 4,300,000 hp. can be developed economically in this region. The hydro-electric phase of the project (Yukon River — Atlin Lake — Taku River Power Project) calls for diversion of flow of the upper Yukon River and adjacent streams, by a series of dams and mountain tunnels, to the valleys south of Atlin Lake. The industrial phase involves construction of smelters and refineries to produce nickel, cobalt, iron, steel, and manganese alloys. Plans to 1962 are discussed.

Copy seen: DGS.

38214. WESTERN MINER. Developments in the Canadian North. (Western miner, Apr. 1954. v. 27, no. 4, p. 48-54, illus.)

Contains summary of exploratory activity, mining developments, and amount and value of mineral and petroleum production in the Northwest Territories and Yukon in 1953. Mining areas briefly described include: Yellowknife, Quytá-Giauque Lake, Marian River, Gordon Lake, Beaulieu River, MacKay-Courageous Lakes, Great Bear Lake, Pine Point, Stark Lake, Thubun Lake in Mackenzie District; Ramkin Inlet (Keewatin); and (in Yukon Territory) Dawson, Mayo, Whitehorse, Peel Plateau, and Vangorda Creek.

Copy seen: DGS.

38215. WESTERN MINER. Geological reconnaissance by air. (Western miner, Mar. 1953. v. 26, no. 3, p. 35, illus.)

Contains note on aircraft used by the Geological Survey of Canada in mapping 57,000 sq. mi. of Keewatin District in summer 1952. During "Operation Keewatin" two helicopters flew a total of 533 hours and made 2,000 landings, enabling a single geologist to map 900 sq. mi. a day from an average altitude of 350 ft.

Copy seen: DGS.

38216. WESTERN MINER. Geological Survey programme. (Western miner, June 1954. v. 27, no. 6, p. 51)

The Geological Survey of Canada will place 86 parties in the field in 1954, 21 in arctic areas. Largest project is "Operation Baker," 60,000 sq. mi. reconnaissance of central Keewatin, using two helicopters. Other parties will work on northern Baffin, Prince Patrick, Eglinton, western Melville, and northwest Ellesmere Islands, and in the northern Quebec-Labrador iron areas. Summary of this program also appears in: *Canadian*

weekly bulletin, May 21, 1954. v. 9, no. 29, p. 6. *Copy seen:* DGS.

38217. WESTERN MINER. New iron ore deposit. (Western miner, Oct. 1954. v. 27, no. 10, p. 47)

A body believed to be magnetite iron was discovered in Aug. 1954 at 60°16' N. 102°53' W., just north of the Saskatchewan boundary, during an aeromagnetic survey of 15,000 mi. of the Northwest Territories by the Geological Survey of Canada. The anomaly disclosed by the survey has an areal extent of four miles. Economic possibilities must be determined by ground work.

Copy seen: DGS.

38218. WESTERN MINER. 1952 mineral production in Northwest Territories. (Western miner, Apr. 1953. v. 26, no. 4, p. 45)

Development work was in progress on 23 properties, six gold, three uranium, two lead-zinc, and one tungsten. Exploratory drilling at Pine Point lead-zinc field (Great Slave Lake, 61°01' N. 114°15' W.) is briefly described. Statistics are given on total mineral production, gold production, number of claims staked, amount of diamond drilling, etc.

Copy seen: DGS.

38219. WESTERN MINER. 1953 survey programme. (Western miner, June 1953. v. 26, no. 6, p. 53)

Contains outline of work to be carried out by 172 field parties from the Canadian Geological, Topographical, and Geodetic Surveys, Legal Survey, Hydrographic Service, Dominion Observatories, and Geographical Branch. Survey and mapping projects in the Northwest Territories, Yukon Territory, Northern Quebec, and Labrador are noted.

Copy seen: DGS.

38220. WESTERN MINER. Uranium exploration in the Northwest Territories. (Western miner, Nov. 1953. v. 26, no. 11, p. 142-43, illus.)

Contains brief description of trenching and geiger surveys in Mackenzie District in 1953 by Hottah Lake Uraniums, Ltd. and Consolidated Indore Uranium Mines, Ltd. at Hottah Lake (65°05' N. 118°36' W.), and by American Yellowknife Mines, Ltd. in the Marian River region (63°04' N. 116°19' W.) 15 miles west of the Snare River hydro-electric power plant.

Copy seen: DGS.

38221. WESTGATE, LEWIS GARDNER, 1868- Ore deposits of the Salmon River district, Portland Canal region. (In: U. S. Geological Survey. Mineral resources of Alaska in 1920. Bulletin, 1922, no. 722, p. 117-40, 3 sketch maps)

Contains the results of a geologic field investigation in 1920 by the author, of the Salmon River district in extreme southeastern part of Southeast Alaska. Lists publications on the district, and describes the topography, climate, commercial conditions, and the geology. Presents a classification of the gold and silver ore deposits and discusses the relation of the ore deposits to the granite batholite of the Coast Range, the distribution of the ore deposits, and their origin, and the outlook for production. Describes several mining properties.

38223. WEXLER, LEWIS. Advanced base snow removal; field tests in Maine provide data on equipment that will make up new components. (BuDoeks technical digest, Apr. 1954. no. 44, p. 17-23, illus., diagrs.)

"Tests to determine the adequacy of commercially available equipment for snow removal were conducted during Jan.-Feb. 1954 at the Naval Air Station, Brunswick (Maine). Two 8000-ft. parallel and one 6000-ft. intersecting runways, 300 ft. wide, were used. The equipment and techniques used for snow and ice removal are given. It was estimated that 140,000 tons of snow were removed during the test period, varying in weight from

8-25 lb./cu. ft. No satisfactory method for ice removal and control was found. The reversible-type blade plow is satisfactory for removing snow up to 12 in. deep at 28-35 m. p. h. and provides for flexible operation. Rotary plows were used primarily to remove windrowed snow and for snow loading."—SIPRE.

38225. WHEELER, J. O. A geological reconnaissance of the northern Selwyn Mountains region, Yukon and Northwest Territories. Ottawa, 1954. 42 p. fold. map. (Canada. Geological Survey. Paper 53-7) 10 refs.

Contains report based on work in summer 1952 of a four-man party led by the writer, in the headwaters region of the Rackla, Bonnet Plume, Snake, Stewart, and Hess Rivers, between 63°-65° N. 130°-134° W. Notes are given on history, accessibility, transportation and natural resources of the region. Physiography and glaciation are briefly described. Sedimentary rocks range from Cambrian and earlier (?) to Devonian (?) or later. Volcanic rocks are of late Cretaceous or early Tertiary age. Granite and diorite bodies outcrop in several areas. Structure pattern and economic geology are briefly described. No mineral deposits have been explored or mines developed, but areas within the metamorphic haloes around granitic stocks should be favorable for prospecting.

38240. WIGGINS, IRA LOREN, 1899- Arctic botanical research. (Science, May 16, 1952. v. 115, no. 2994, p. 3)

Contains information on Alaskan arctic research development since 1946 as sponsored by the U. S. Office of Naval Research and the Arctic Institute of North America. Main problems studied recently in botany and the names of investigators and their institutions, are listed.

Copy seen: DLC.

38241. WIGGINS, IRA LOREN, 1899- *Cystopteris dickiana* and *Woodisia glabella* in arctic Alaska. (American fern journal, July-Sept. 1954. v. 44, no. 3, p. 97-108)

Contains a detailed morphological study of these two ferns, almost alike in general appearance and occupying the same type of habitat, often growing in intertangled clumps. Based on the investigation of specimens collected at Umiat, East Oumalik ($69^{\circ}28' \text{ N. } 155^{\circ}23' \text{ W.}$), near Dawson in Yukon Territory, and at the Anaktuvuk Pass ($68^{\circ}20' \text{ N.}$ in northern Alaska). *Woodisia glabella* is also reported recently from Southampton Island and near Spence Bay on the Boothia Isthmus.

38242. WIGGINS, IRA LOREN, 1899- The distribution of vascular plants on polygonal ground near Point Barrow, Alaska. (Stanford University. Dudley Herbarium. Contributions, June 18, 1951. v. 4, pt. 3, p. 41-52, illus., 2 cross-sections, table) 3 refs.

"The vegetational cover on four sites representing different stages in the development of 'polygonal ground' in a permafrost area near Point Barrow, Alaska, consists of 29 species of flowering plants and several species of mosses and lichens." Characteristics of permafrost areas and development of polygonal soils are briefly described. Distribution of species on tops of hummocks or ridges, in centers of polygons, and in ditches separating polygons is discussed. Eight of the 29 species observed occur at all sites, four constituting major elements in the plant cover. Great variations in soil conditions are found within a few square meters. Future work on soils in the active layer and on relationships between plants and soils (as yet "virtually unknown") is recommended. Influence of ground ice on distribution and character of vegetation is noted. Observations were made in Aug.-Sept. 1950 during work at the Arctic Research Laboratory, Pt. Barrow.

Copy seen: DSI.

38243. WIGGINS, IRA LOREN, 1899- Foraging activities of the snowy owl, *Nyctea scandiaca*, during a period of low lemming population. (Auk, July 1953. v. 70, no. 3, p. 366-67)

Contains observations on snowy owl hunting regularly for eiders wounded by gun-shot, near Point Barrow, northern Alaska, following the "crash" in the population of the brown lemmings in 1949. Once the same bird was observed

killing a red phalarope (*Phalaropus fulicarius*) wounded by flying into antenna wire. **Copy seen:** DSI; MH-Z.

The gray-cheeked thrush at Point Barrow, Alaska. (Condor, May-June 1954. v. 56, no. 3, p. 163)

Contains record of a specimen of *Hylocichla minima minima*, found dead on the ground directly under the radar target at Point Barrow, Alaska, on Sept. 19, 1952. Four specimens of the same bird are recorded previously from Point Barrow region. **Copy seen:** DSI; MH-Z.

38245. WIGGINS, IRA LOREN, 1899-
North of Anaktuvuk. (Pacific discovery, May-June 1953. v. 6, no. 3, p. 8-15, 10 illus.)

Informative article on the Arctic Slope of northern Alaska. The importance of Anaktuvuk Pass in the Brooks Range to the life of the Eskimos is noted. Permafrost, the formation of polygonal ground, arctic vegetation and soils, the lemming cycle and its relation to other wildlife and to the Eskimos are among the topics discussed at some length. The excellent illustrations are from photographs taken in the Point Barrow region.

38246. WIGGINS, JOSEPH, 1832-1905.
Communication with Siberia by sea. (Geographical magazine, Mar. 1877. v. 4, p. 55-59, fold. map)

A brief account of author's exploratory expeditions from England to Kara Sea: (1) on the *Diana* to the entrance of Obkskaya Guba and return, June 3-Sept. 26, 1874; (2) on the *Thames* to the Yenisey River in 1876; the ship reached Kureyka on Oct. 17, where it wintered, while the author returned overland via Yeniseysk and St. Petersburg to England. The results of his oceanographic observations in Kara Sea (sea-water density and temperature) to prove the influence of Gulf Stream, are given (p. 57). Wiggins combats the view that Kara Sea is not navigable and exhorts that it be utilized as a trade route to open exchange of Siberian goods (fur, fish, minerals, cereals, etc.) for European. Fold. map, 1:3 million, shows tracks of the *Diana* and *Thames*. **Copy seen:** DLC.

Contains description of the life of the household on northern Baffin Island into which the writer was adopted. His sojourn there, Apr. 1953-May 1954, was sponsored by the Arctic Institute of North America. His aim was to "know the Eskimo, his way of life, his thinking, what he is capable of doing . . . and to prepare a report on his everyday life and problems." Hunting and trapping, winter travel, Eskimo customs, beliefs and attitudes, etc., are presented. Some suggestions are made as to education, trade, etc., to aid Eskimo adaptation to White culture.

38250. WILLEMS, RALEIGH C. Low altitude refraction correction. (Navigation, Sept.-Dec. 1951. v. 3, no. 1-2, p. 41-45, table) 7 refs.

Contains a refraction correction table for U. S. Air Force observers, especially for use in polar areas and near the times of sunset and sunrise in lower latitudes when observing, computing and plotting a celestial line of position. All available existing tables were averaged graphically, the mean tabulated, and all values used converted to standard atmospheric conditions of +15° C. and 29.92 inches Hg. Refraction is shown in whole minutes with the corresponding sextant altitude in degrees and minutes. Values for pressure altitudes up to 70,000 ft. and for temperatures to -100° C. are given. A refraction correction table within the

accuracy requirements of practical celestial navigation is included.

38251. WILLETT, GEORGE, 1879-1945. Comments on two recent numbers of Bent's Life histories of North American birds. (Condor, Jan.-Feb. 1923. v. 25, no. 1, p. 25-27)

Contains critical notes on additional data on distribution, nesting or breeding of eight birds, native to Southeast Alaska, Forrester and St. Lazaria Islands, and described in A. C. Bent, *Life histories* . . . (Arctic Bibliography, No. 1341).

Copy seen: DSI; MH-Z.

38252. WILLETT, GEORGE, 1879-1945. Comments upon the safety of sea birds and upon the "probable" occurrence of the northern bald eagle in California. (Condor, Nov.-Dec. 1920. v. 22, no. 6, p. 204-205)

Contains observations on the ability of the young of the ancient murrelet, *Synthliboramphus antiquus*, to withstand rough weather in Alaska waters. The conclusion is drawn that the sea birds are not "killed by storms" but mostly die of diseases. The second part of the paper deals with J. H. Fleming's suggestion (pub. in Condor, 1920, v. 22, p. 110) that a certain specimen in his collection of Californian birds is the northern bald eagle, *Haliaeetus leucocephalus alascanus*. Willett suggests that the bird in question is a large specimen of southern bald eagle, *H. leucocephalus leucocephalus*.

Copy seen: DSI; MH-Z.

38253. WILLETT, GEORGE, 1879-1945. Description of a new *Pandora* of the subgenus *Kennerlyia* from Forrester Island, Alaska. (Nautilus, Apr. 1918, v. 31, no. 4, p. 134-35)

Contains a description of the marine bivalve *Kennerlyia forresterensis* n. sp. (type locality Forrester Island, Alaska, in 50 fathoms).

Copy seen: DSI; MH-Z.

38254. WILLETT, GEORGE, 1879-1945. Destruction of eagles in Alaska. (Auk, Oct. 1927. v. 44, no. 4, p. 591-92)

Contains a discussion of the bounty on the bald eagle, as not endangering the eagle population in Alaska; these predators' damage to game animals, especially to deer, when fawns are small, is stressed.

Copy seen: DSI; MH-Z.

38255. WILLETT, GEORGE, 1879-1945. Mammal notes from Wrangell, Alaska. (Murrelet, 1921, v. 2, no. 2, p. 17-18)

Contains an annotated list of mammals observed within five miles of the town Wrangell in Southeast Alaska, between Sept. 1920 and March 1921; includes notes on the Sitka deer, pine squirrel, flying squirrel, Alaska wolf, porcupine, black bear, island mink, Alaska weasel and a few species of mice and shrews.

Copy seen: DSI; MH-Z.

38256. WILLETT, GEORGE, 1879-1945. Mollusca of Forrester Island, Alaska; univalves. (Nautilus, July 1919, v. 33, no. 1, p. 21-28)

Contains an annotated list of about 150 molluscs of the Forrester Island coastal waters, and four terrestrial species, with data on habitat and abundance. *Velutina rubra* (dredged at 40 fathoms) is described as new.

Copy seen: DSI; MH-Z.

38257. WILLETT, GEORGE, 1879-1945. A new *Cardita* from the Aleutian Islands and a new *Epitoneum* from Southern California. (San Diego Society of Natural History. Transactions, Apr. 15, 1932, v. 7, no. 9, p. 85-90, plate 5)

Includes a description of a shell, *Cardita umnaka* n. sp., collected by the author on Umnak Island, July 1926.

Copy seen: DLC; MH-Z.

38258. WILLETT, GEORGE, 1879-1945. Notes on the Mollusca of Forrester Island, Alaska. (Nautilus, Oct. 1918, v. 32, no. 2, p. 65-69)

Contains notes on the geography and hydrological regime of Forrester Island, Southeast Alaska; and an annotated list of 67 bivalves, with data on habitat and frequency. **Copy seen:** DSI; MH-Z.

38259. WILLETT, GEORGE, 1879-1945. Ornithological notes from southeastern Alaska. (Auk, 1921, v. 38, p. 127-29)

Contains an annotated list of 22 birds observed in southeastern Alaska (Craig, Prince of Wales Island, Dall and Wrangell Islands). Published in anticipation of the appearance of a new American Ornithological Union check list, the notes are mostly in the nature of extension of ranges as given in the last check list.

Copy seen: DSI; MH-Z.

38260. WILLETT, GEORGE, 1879-1945. Remarks on Alaskan savannah

sparrow. (Condor, Mar.-Apr. 1939, v. 41, no. 2, p. 86)

Contains corrections and additions to the record of *Passerculus sandwichensis crassus* in the paper of J. L. Peters and L. Griscom, *Geographical variation in the savannah sparrow*, 1939, q. v., the breeding range of which is said (p. 460) to be "islands in the Alexander Archipelago from Chichagof Island to Prince of Wales Island; also in the adjacent mainland at the Chickamin River."

Copy seen: DSI; MH-Z.

38261. WILLETT, GEORGE, 1879-1945. Variation in North American ravens. (Auk, Apr. 1941, v. 58, no. 2, p. 246-49)

Contains a study of geographic races of *Corvus corax* in North America, based on Alaskan material. Measurements of *C. c. principalis* (eight males) are included.

Copy seen: DSI; MH-Z.

38262. WILLIAMS, CECIL J., SLOAN, 1907-, and C. A. SOOTER. Canada goose habitat in Utah and Oregon. (North American Wildlife Conference. 5th, Washington, D. C. Transactions, 1940, p. 383-87, tables)

Contains an account of a study of this goose at the Bear River and Malheur Refuges in Utah and Oregon, probably the most important breeding grounds of the species in the United States. Types of areas, extent of nesting, vegetation, visibility, grazing area, food, etc., are discussed.

Copy seen: DLC.

38263. WILLIAMS, DONALD E. When you fly the northern routes. (Flying safety, Feb. 1953, v. 9, no. 2, p. 6-9, illus.)

Suggestions for pilots and navigators flying in cold regions. Included are tips on pre-flight planning, weather, altimeter readings, icing, and ice fog. Emergency measures used during radio blackouts, ADF techniques and radio ranges are discussed. Aural null and wing tip null techniques are described in detail.

Copy seen: DLC.

38264. WILLIAMS, HOWEL, 1898- Preliminary notes on geological work done on Mount Katmai and in the Valley of Ten Thousand Smokes, Alaska. Based on observations of: Dr. Garniss Curtis, Dr. Howel Williams and the late Dr. Werner Juhle. Prepared by Dr. Howel Williams. (In: Luntz, R. S., and others. Interim report on Katmai Project ... Alaska, Mar. 1954, p. 55-61)

The writer, G. Curtis, and R. W. Juhle spent the last two weeks of June 1953 on Mt. Katmai and in the valley, as part of the Katmai Project. Studies were continued subsequently by Juhle until his death in Sept. Opinions of C. N. Fenner on the 1912 volcanic events in the region are briefly summarized, and a new interpretation based on 1953 field work is presented. Results of the work indicate that: (1) no sill of rhyolitic magma was injected beneath the valley floor; (2) rhyolitic and andesitic magma were discharged simultaneously from the same or adjacent fissures in the valley; (3) both types of magma were also erupted together from the crater of Mt. Katmai; and (4) the older dome of Falling Mountain disappeared as result of repeated slides precipitated by earthquakes.

Copy seen: DI.

38265. WILLIAMS, J. E. D. Loran or Consol?; no pat answer. (Aviation age, May 1954. v. 21, no. 5, p. 60-65, graphs, map)

Contains comparison of Loran and Consol navigation systems. The advantages of Consol outweigh those of Loran, but the complementary values of both are greater so that the best use must be made of existing equipment. An Iceland-Greenland Loran chain and a Consol station at the southern tip of Greenland are suggested since no coverage exist in this area presently.

38266. WILLIAMS, MAXCINE MORGAN. 1904-. Alaska wildflower glimpses. 2d ed. Juneau, 1953. 52 p. illus.

Second edition of *Arctic Bibliography*, No. 27408, with additional information on trails in the Juneau area and flowers in the Anchorage area and 19 more photographs; some new names are included in the alphabetical list of flowers.

Copy seen: DLC.

38267. WILLIAMS, RALPH B. *Izodes auritulus* on a savannah sparrow. (Auk, Oct. 1946. v. 63, no. 4, p. 590)

Contains notes on larval ticks attached about the rim of the eyes of an adult *Passerculus sandwichensis alaudinus*, trapped on May 10, 1945, at Gold Creek, Juneau, Alaska. They were "identified as female *Izodes auritulus*, eight fed larvae. The male of this species has never been found."

Copy seen: DLC; MH-Z.

38268. WILLIAMS, RALPH B. Notes on the arctic tern in Alexander Archipelago, Southeastern Alaska. (Auk, Jan. 1947. v. 64, no. 1, p. 143-44, plate 6)

Contains observations made in June-July, 1945, on the nests and nesting habits of the arctic tern, *Sterna paradisaea* on various islands of the Alexander Archipelago near Juneau. Some other shore birds are also noted.

Copy seen: DSI; MH-Z.

38269. WILLIAMSON, GEOFFREY. Changing Greenland. London, Sidgwick and Jackson, 1953. x, 280 p. 55 illus. on 17 plates, 3 text maps. 27 refs.

Contains a survey of Greenland's history and present status by an English journalist who traveled along the West Coast during the Royal Visit of 1952. A description is given of the Greenlanders and the effect of modern culture and the U.S. air bases upon their life. Expeditions from the time of the Vikings, the work of Hans Egede and Hendrik Rink are sketched. The administration and government, health, education, and occupations of the Greenlanders from the 18th century to World War II, are outlined. Chapter 10 deals with the war years. Discussion of the post-war period includes exploration (with particular emphasis on the British North Greenland Expedition 1951-1954), work of the Danish Royal Commission and resulting changes in government, fisheries, visits by the Danish Royal Family, industry, agriculture, sheep-herding, and mining, construction of the Thule air base, Greenland's strategic importance, and its future, with notes on the tourist industry and air travel. A chronology, many excellent photographs, and a useful index complete this popular but comprehensive survey.

Downes, J. L. Robinson, J. D. Leechman, A. D. Copland, L. Butler, L. Manchester, A. E. Porsild, T. M. Shortt, G. MacEwan, F. J. Alecock, H. Kearney, P. H. Godsell, A. Croft, and G. W. Rowley.

An informative presentation, for the general reader, of various phases of the Canadian Arctic and sub-Arctic, each chapter written by a specialist. Subjects discussed include among others: physiographic divisions, exploration, climate, Indians and Eskimos, land and sea mammals, fur trade, fishery; flowers and forests, birds, agriculture, mineral resources, duties of the Royal Canadian Mounted Police; transportation; and defense. **Copy seen:** CaMAL.

38273. WILSON, J. WARREN. The influence of 'midnight sun' conditions on certain diurnal rhythms in *Oxyria digyna*. (Journal of ecology, Jan. 1954. v. 42, no. 1, p. 81-94, 6 graphs) 15 refs.

Contains examination of variations in stomatal aperture and in carbohydrate concentration in the leaves of this typical arctic species. Leaf samples were taken on June 25, 26, and 27 (as part of the botanical work of the Oxford University Expedition to Jan Mayen in 1947 and the Reading Jan Mayen Expedition of

1950). Methods are described and results discussed. It was found that: (1) stomata in the leaves of *Oxyria digyna* showed even at midsummer a clear diurnal rhythm of movement, being more widely open during the day than at "night"; (2) concentration of total carbohydrate in the leaves showed a marked though somewhat irregular diurnal rhythm greater than that in England at the same time of year; (3) total sugar showed no diurnal rhythm on Jan Mayen and a clear rhythm in England; and (4) concentrations of total carbohydrate of *Oxyria* leaves in the Arctic were about twice as high as in leaves growing in England. **Copy seen:** DLC.

38274. WILSON, ROWLAND STEELE. The summer bird life of Attu. (Condor, May-June 1948. v. 50, no. 3, p. 124-129) 5 refs.

Contains notes on the physical geography of Attu Island in the Aleutians, and an annotated list of 24 birds observed during the summer of 1945. More than thirty plants collected there are identified by G. B. Van Schaack.

Copy seen: DSI; MH-Z.

38275. WINCHESTER, JAMES H. Northeast Command guards polar routes. (Aviation age, Dec. 1953. v. 20, no. 6, p. 20-23, illus. incl. map)

From an interview with Lt. General Charles T. Myers, commanding general, a sketch is given of the area, work and problems of the U. S. Northeast Command. Weather operations and meteorological research being carried on are stressed. Future commercial flights over the area and supply procedures are briefly discussed. **Copy seen:** DLC.

38276. WINCHESTER, JAMES H. Top of the world gets traffic control. (Aviation age, Apr. 1954. v. 21, no. 4, p. 70-71, map)

Brief description of the air traffic control system, inaugurated in the Greenland-Baffin Island area in 1953, and operated by the Northeast Air Command of the U. S. Air Force. The system conforms with International Civil Aviation Organization areas to the south. The area is divided into three flight information regions monitored by air traffic control centers at Thule, Sondrestrom, and Narsarsuak. Approach control areas extending in a radius of 100 miles around each base were established.

38277. WINCHESTER, JAMES W. A study of the movement of arctic sea ice in the Canadian Arctic in relation to meteorological, geographical and oceanographic parameters. (American Meteorological Society. Bulletin, Nov. 1954. v. 35, no. 9, p. 417-27, 13 text maps, 6 graphs) 7 refs.

The apparent erratic movement of arctic sea ice and the variable difficulty of passage for surface ships through ice fields of approximately the same cover and thickness are problems in arctic operations. In an attempt toward the development of an ice forecasting technique, the following are considered: (1) direction and magnitude of mass transport currents in the ocean; (2) direction of mass transport currents in restricted waters such as Lancaster, Jones, and Smith Sounds; (3) direction of tidal currents in restricted waters; (4) relationship between ice drift and surface wind velocity. Observational data on ice movement in Lancaster Sound, Barrow Strait, and Resolute Bay during July 23-Aug. 10, 1951, are given. As a result of this and other investigations "it is believed that fairly reliable short-range ice forecasts are now possible from our present knowledge of meteorology and oceanography if synoptic ice reports are made available by aircraft reconnaissance."

38280. WINSOR, TRAVIS. Skin temperatures in peripheral vascular disease; a description of the thermistor thermometer. (American Medical Association. Journal, Apr. 24, 1954. v. 154, p. 1404-1407, illus. table) 5 refs.

Contains description of an accurate, simple, portable apparatus for thermometric measurements, with multiple sensing elements (thermistors). It is applicable to detection of vascular diseases, including those due to frostbite; of effects of sympathectomy; abnormal responses to cold, etc.

Copy seen: DLC.

38281. WINSTON, JAY STEVEN, 1921- *see* The annual course of zonal wind speed at 700 mb. (American Meteorological Society. Bulletin, Dec. 1954. v. 35, no. 10, p. 468-71, 3 charts) 10 refs.

"The annual course of [geostrophic] zonal wind speed at 700 mb. for latitudes 20° to 90° N. [Western Hemisphere] is portrayed in three ways: from monthly

normal data, from monthly mean data averaged over a recent seven year period [Sept. 1945-Aug. 1952], and from five-day mean data averaged over the same seven years . . . The five-day data reveal certain well-marked shorter period variations in the westerlies which appear to be related to singularities of the general circulation."—*Author's abstract.*

38282. WINTER, CHARLES A., and L. FLATAKER. The relation between skin temperature and the effect of morphine upon the response to thermal stimuli in the albino rat and the dog. (*Journal of pharmacology and experimental therapeutics.* Oct. 1953. v. 109, no. 2, p. 183, illus.) 5 refs.

Morphine produced a rise in rectal and skin temperature in rats, but a decrease in dogs. The rise in reaction threshold to a thermal stimulus in rats after morphine, is due to the increase in the temperature of reaction; in the dog it is largely due to lowering of the skin temperature.

38288. WOHLSCHLAG, DONALD EUGENE, 1918- . Growth peculiarities of the cisco, *Coregonus sardinella* (Valenciennes), in the vicinity of Point Barrow, Alaska. (Stanford ichthyological bulletin, Aug. 16, 1954. v. 4, no. 3, p. 189-209, 3 graphs, 5 tables) 24 refs.

Contains quantitative description of some differences in growth patterns and body forms of the ciscoes which occur in both marine and fresh-water populations; based on 116 specimens from a tidal estuary and 178 from a fresh-water lake, collected July 19-Aug. 27, 1952 near the Arctic Research Laboratory. Recorded length and weight data for the two groups are compared and difference discussed with reference to environment. The fresh-water specimens are heavier-bodied and fatter than those from brackish-water. Statistical examination is also made of length-weight relationships for fish of three scale-type groups found in this lake by D. Cohen, q. v.

38293. WOLSKY, A., and J. S. HUXLEY. The reaction of normal and mutant types of *Gammarus chevreuxi* to light. (Journal of experimental biology, Oct. 1932. v. 9, no. 4, p. 427-40, 5 fig., 3 tables) 16 refs.

Normal, wild specimens of this crustacean studied showed negative phototaxis. This is held to be tropotaxis, because circus action appeared when one eye was varnished. Addition of acetic acid, but not caffeine, to the medium changed negative into moderate positive phototaxis. Albino mutants, which have neither retinulae, nor optic nerves, show no phototaxis.

38307. WRIGHT, CHARLES WILL, 1879-, and S. PAIGE. Copper deposits of Kasaan Peninsula, Prince of Wales Island. (In: U. S. Geological Survey. Mineral resources of Alaska in 1907. Bulletin, 1908, no. 345, p. 98-115, map)

Contains preliminary results of a study of the occurrence of copper deposits on Kasaan Peninsula. The general geology

and ore deposits are briefly discussed and descriptions of numerous mines and prospects are given. The ore deposits consist of low-grade copper-bearing contact-metamorphic deposits, chalcopyrite and magnetite occurring in the contact zones of diorite and syenite intrusives into Devonian (?) sediments. Some practical deductions are drawn as to search for ore deposits and costs of operation. Authors' later report is listed as *Arctic Bibliography*, No. 19701.

Normal rats, suprarenalectomized rats with autoplasmic cortical transplants or with gross accessory cortical masses have similar, slight variations in rectal temperatures when exposed for two hours to moderate cold. Animals with cortical insufficiency in similar environment showed a drop in rectal temperature, marked external reactions to cold, etc.

38315. WYNNE - EDWARDS, VERO COPNER, 1906-. On the habits and distribution of birds on the North Atlantic. (Boston Society of Natural History. Proceedings, Jan. 1935. v. 40, no. 4, p. 233-346, plates 3-5) 115 refs.

A study of seafaring birds in three major groups: the inshore, cormorants, scoters, eiders, etc.; the offshore, gannets, auks, terns; and the pelagic, kittiwakes, phalaropes and jaegers. Some thirty northern species, gulls, auks, and petrels, are listed with data on their status, field characters, habits, distribution and migration routes; distributional tables and text maps are added. Many species occurring in the coastal waters of Labrador Sea, Baffin Bay-Davis Strait, and Greenland Sea, are included.

Aug. 1951. v. 8, no. 4, p. 244-50, diagrs., graphs, table)

Contains a discussion of the importance, in the general circulation, of friction effects resulting from the molecular viscosity of the air. A maximum of viscous action at 200 km. is suggested. "On the basis of observed temperature lapse rates and the proposed vertical distribution of viscous action, a simple meridional circulation is developed for ionospheric regions. This circulation is used to explain longitudinal differences observed in electron concentrations for the F₂ layer. The association between the ionospheric data and the proposed circulation is considered sufficiently close to merit additional study and investigation." Ionospheric winds in the polar regions are compared with those of more southerly latitudes, and ionospheric data for Fairbanks (Alaska) and Clyde (Baffin Island) are presented.

38323. YOUNG, H. A. Care of Indians, Eskimos. (Canadian weekly bulletin, Dec. 12, 1952. v. 8, no. 6, p. 5-6)

Excerpt from an address delivered before the Third Session of the Council of the Northwest Territories, Dec. 8, 1952. Government, medical and social

service in this area, hospital construction, X-ray surveys, welfare instruction, old age pensions, aid to the blind, etc., are reviewed. *Copy seen:* DLC.

38324. YOUNG, H. A. Pioneer signal stations in the Arctic. (Canadian Army journal, Feb. 1948. v. 1, no. 11, p. 2-7, 7 illus., text map)

Contains description of attempt to set up a radio station on Herschel Island (Yukon Territory; 69°35' N. 139°05' W.) in 1924-25. The four-man party led by the writer arrived at Herschel July 1924. Building materials, technical equipment, winter clothing and food supplies were lost en route from Vancouver when the *Lady Kindersley* sank off Alaska in Aug. The party wintered on the island using a missionary's hut, Eskimo clothing, makeshift radio, etc. In July 1925 supplies arrived down the Mackenzie, and the station was built at Aklavik rather than at Herschel. The party wintered at Aklavik 1925-1926. A radio set was installed on Herschel in summer 1926 and operated each summer until 1937. *Copy seen:* DLC.

38325. YOUNG, H. A. The promise of the North. Ottawa, May, 1953. 7 p. Mimeographed. (Canada. Dept. of External Affairs. Information Division. Statements and speeches, no. 53/28)

Contains text of an address by the Canadian Deputy Minister of Resources and Development and Commissioner of the Northwest Territories to the Canadian Manufacturing Association, Toronto, May 28, 1953. Mineral and water-power resources of the Yukon and Northwest Territories are described with comments on climate and transportation problems. Future development of industry (mining and secondary industries) in such towns as Yellowknife and Whitehorse is discussed with reference to present mines and production. Administration and government in the Territories is briefly outlined.

Biographical sketch of Mavra Pavlovna Cherskaia, 1857-19-?, wife and aide of Ivan Dement'evich Cherskiĭ, famous Polish-Russian explorer of Siberia. Her participation in husband's Baykal expedition is mentioned, and her part in his last expedition to Nizhne-Kolymsk 1891-1892, and return journey after his death described. Information is given about her son, Aleksandr Ivanovich Cherskiĭ, the ichthyologist, 1879-1923, who as a boy accompanied his parents on the expedition to Nizhne-Kolymsk, and who perished while exploring the Commander Islands. Sketch map (p. 23) shows the route of the Kolyma expedition and gives a scheme of the present-day conception of the Cherskiy Range. The book is based on Cherskiĭ's *Svėdėtėniā ob ėkspeditsii . . .*, 1892-93 (*Arctic Bibliography*, No. 3106) and other publications and on notes of M. N. Cherskaia, widow of A. I. Cherskiĭ.

The book was reviewed by V. A. Obruchev in *Vses. Geograficheskoe obshchestvo, Izvestiā*, May-June, 1954. t. 86, no. 3, p. 302. **Copy seen:** DLC.

Brief summary of research on: polar seas (currents and ice conditions), agricultural possibilities, meteorology, geophysics, accurate measurement of longitude, geology and mineral resources, cryopedology, ethnography and anthropology, medicine, and distribution of plants and animals.

Copy seen: DGS.

38349. ZAVATTI, SILVIO, 1917- . Le regioni polari e l'Italia. (Universo, May-June 1954. anno 34, n. 3, p. 455-70, 4 illus., 2 text maps) 20 refs. Text in Italian. *Title tr.*: The polar regions and Italy.

Contains a summary of the Italian voyages of discovery from 1431 to 1934, Italy's whaling industry, publications on and associations for the study of arctic regions, and Italian geographical names in the Arctic.

Copy seen: DGS.

38350. ZAVATTI, SILVIO, 1917- . Saggio de bibliografia polare. Messini, Casa Ed. G. D'Anna, 1950. 67 p. Text in Italian. *Title tr.*: Attempt at a polar bibliography.

"Preceded by a glossary giving definitions of 33 terms (most of which apply to various types of ice), this review of international polar literature includes well over 200 references to books, reports, articles, periodicals, serials and maps. The literature referred to mainly deals with general aspects, political problems and the exploration of the polar regions, classified [by these subjects, then] according to country of origin. Many of the papers are ab-

stracted or commented on separately."—*Meteorological abstracts & bibliography*, Sept. 1954. v. 5, no. 9, p. 1100.

A message by radio from the drifting station "North Pole-4" in the Arctic Basin, telling of the conditions of life at the station and everyday work of its two radio operators (the writer and P. Tselishev): keeping in touch with the other drifting stations and with the mainland (Moscow). Tribute is paid to the efficiency of the equipment; and remarks are added on radio wave propagation in the Arctic. *Copy seen:* DLC.

38352. ZAVEDEEV, IGOR' VLADI-MIROVICH. Zametki s dreifûshcheli stantsii. (Radio, Nov. 1954, no. 11, p. 6-7, illus.) Text in Russian. *Title tr.*: Notes from a drifting station.

Radio operator's account of setting up the drifting station "North Pole-4," 1954, particularly its radio station; and work of the author and his assistant, Tselishev, in keeping up communication with the other drifting stations and the mainland. A change of location for the station and transfer of the radio equipment to the new site by helicopter are noted.

38353. ZBRUEVA, A. V. Ideologiâ naseleniâ Prikam'â v Anan'inskuû èpokhu. (Akademiâ nauk SSSR. Institut ètnografii. Trudy, 1947. nov. seriâ, t. 1, p. 25-54, 3 illus., 5 plates) Text in Russian. *Title tr.*: The ideology of the inhabitants of the Kama region in the Anan'ino period.

Contains an interpretation of archeologic objects, belonging to the Anan'ino culture, discovered since 1850 in the Kama-Volga region; they are dated about 800-400 B. C. and attributed to the Finno-Ugric peoples. An attempt is made to deduce from the objects of art (sculptures, ornaments, etc.) this people's ideas about life after death, their attitudes toward ancestors, the forms and meaning of sacrifices, ideas about gods and their world, etc. The recent beliefs and rites of Votyaks, Zyryans, Voguls and Ostyaks are used for the interpretation of these archeologic objects.

Contains a description of basic changes in the dog during hypothermia. Hyperventilation was found to be of main importance for successful hypothermic anesthesia and the use of potassium chloride the only method of defibrillation of the ventricles. Indications for hypothermic anesthesia are also discussed. The first part of this study* is listed as *Arctic Bibliography*, No. 32338.

Deals with inhabitants in Sweden and Norway, including Lapland. The different population zones from the anthropologic point of view are characterized and mapped. The Laponoid race is considered as consisting of two different branches: the prehistoric southern, and the more recent northern or the Lapps proper. The mixture of Laponoid race with the Nordic and Mediterranean races is discussed.

Contains results of a study of the ecology and parasitology of some littoral marine animals, carried out in 1946-48

in Kandalaksha Bay of the White Sea. The larvae of the fam. Microphallidae were found in molluscs, crustaceans and fishes which are intermediate hosts of these parasites. The final hosts are aquatic birds. The quantity of molluscs investigated and the ratio of infected specimens are presented (tables 1-3). The life cycle and ecology of microphallids are discussed.

Text in Russian. **Title tr.:** On the life cycle of an avian trematode, *Gymnophallus affinis* (Jameson et Nicoll, 1913).

Contains descriptions of cysticeroids and metacerci of an unknown trematode found in the body of a mollusc, *Macoma baltica*, from the northern section of Kandalaksha Bay. The young of some aquatic birds were fed on these sporocysts, and in 48 hrs. many trematodes were found in their alimentary tracts: they were identified as *Gymnophallus affinis*. The measurements of this parasite from various hosts are added.

38364. ZENKEVICH, LEV ALEKSANDROVICH, 1889- . Glubokovodnye vpadiny Tikhogo okeana i ikh fauna. (Akademiia nauk SSSR. Vestnik, 1953. no. 12, p. 85-87) Text in Russian. **Title tr.:** The deep depressions of the Pacific Ocean and their fauna.

Deals chiefly with scientific results of the 14th trip of the research vessel *Vitiaz'* for study of the hydrological regimes of the Bering, Okhotsk, Japanese Seas, Kuril Islands and northwest Pacific waters. Some data are given on the Kurilo-Kamchatka depression (Kuril Trench): maximum depth (10,377 m.) and bottom relief; vertical distribution (five zones) of the deep-sea plankton and great variety of bottom fauna are discussed.

Copy seen: DLC; MH.

(Priroda, Feb. 1954, no. 2, p. 61-74, illus. col. plate, 2 text maps) Text in Russian. **Other authors:** IĀ. A. Birshtein, and G. M. Beliaev. **Title tr.:** A study of the fauna of the Kurilo-Kamchatka depression, based on the material of the Pacific Expedition of the Institute of Oceanology of the Academy of Sciences of the U.S.S.R.

Contains notes on the equipment and methods of work in 1949, and 1953, of the research vessel *Vitiaz'*; data on the depth (10,377 m.), direction and relief of the Kuril Trench and a general description of the abyssal fauna of this region of the Pacific. The collected species (at 12 levels from 950 m. to 9,950 m.) are summarized (table p. 70); various representatives of deep-sea fauna are noted; and maps given of the distribution of 14 species of Pogonophora (fig. 10) and *Boreynsis inermis* (fig. 15). The widespread opinion that the abyssal fauna is

cosmopolitan seems to be not valid: out of 14 known species of Pogonophora, 12 are native to North Pacific and a crustacean, *Sclerocrangon zenkevitchi* is known only from the Bering Sea and the Kuril Trench.

38367. ZENKOVICH, BORIS ALEKSANDROVICH. Khishchnicheskoe istreblenie mirovogo stada kitov. (Priroda, 1935, no. 4, p. 64-68) Text in Russian. **Title tr.:** Rapacious destruction of the whale resources.

Contains characteristics of the most important species of whales: the blue, common finback, humpback, California gray and sperm whale. Statistical data are given on the world catch for the years 1920-1931. The number killed increased from 11,309 in 1920 to 42,874 in 1931, and the author warns that some species face extermination in the near future. The prohibition of killing cows and calves, and introduction of other restrictions on an international basis are recommended.

38374. ZHUKOV, IŬ. Gibel' shkuny "Ermak"; byl'. (Nasha strana, Nov. 1940, no. 11, p. 26-32, illus.) Text in Russian. *Title tr.*: Wreck of the schooner *Ermak*; a true story.

Contains a popular account of a forgotten expedition, based chiefly on the unpublished log of the voyage. Lieutenant Pavel Pavlovich Kruzenshtern, grandson of the famous Russian navigator, I. F. Kruzenshtern, sailed from Kuya on the Pechora River Aug. 1, 1862, with the 170-ton schooner *Ermak* to explore the Kara Sea. The ship passed Yugorskiy Shar, was caught by ice at the entrance to the Kara Sea and drifted helplessly till Sept. 1, when it was crushed. The 22-man crew, exposed to the utmost hardship, succeeded in crossing the ice to the coast of Yamal Peninsula where on Sept. 16, they were succoured by native nomads. The previous and subsequent career of P. P. Kruzenshtern, who fell into disgrace after the failure of the Kara Sea expedition, is briefly reported.

Contains a sketch of the reindeer industry in Arkhangel'sk Govn. Although nine-tenths of the population in 1909, were Samoyeds, they represented only ten percent of the reindeer owners and held but 18,000 of the 200,000 head in the region. They had come to depend more on hunting and fishing, and they served as herders for the big owners. Fodder, pastures, and epidemics (anthrax) are discussed; isolation in small bands, the only way known to protect the herds from anthrax, was feasible only for large-scale breeders, and such were not Samoyeds.

38390. ZOLOTAREV, ALEKSANDR MIKHAĬLOVICH, 1907- Iz istorii ètnicheskikh vzaimootnoshenii na Severo-Vostoche Azi. (Voronezh. Gosudarstvennyi pedagogicheskii institut. Izvestiia, 1938, t. 4, p. 73-87) 35 refs. Text in Russian. **Title tr.:** A study in the history of mutual ethnic relations in northeastern Asia.

The archeology and ethnology of the Bering Strait region are discussed. Characteristics of the American Eskimo cultures are given on the basis of archeological investigations; and accounts of travelers' and Chukchi folklore are drawn upon for the Asiatic side. The

Thule culture, it is concluded, was dispersed over the arctic coast of Siberia from Cape Dezhnev to the New Siberian Islands. The Onkilon and Tunnit tribes of the Chukchi legends were Eskimo tribes, displaced and assimilated by the Chukchis. Many Eskimo elements are found in the contemporary culture of Chukchis and Koryaks. The history of economic and cultural development of northeastern Asia is sketched in three stages: a settled culture of sea-animal hunters (Eskimos); a complex economy of such hunting combined with keeping of small reindeer herds for transport; later, two separate groups of settled coastal hunters and nomad inland reindeer breeders. The ancient Eskimo culture (Old Bering Sea and/or Thule) was spread at least from the New Siberian Islands to Bering Strait in Asia, and further to America. Eskimo-like cultural remains have been excavated also on the Yamal and Kola Peninsulas. The Koryak-Chukchis were descendants of the ancient Eskimos who became reindeer breeders. The part of the Eskimos opposed to the reindeer-breeding economy perished or migrated to America.

Copy seen: DSI (Collins).

38391. ZOLOTAREV, ALEKSANDR MIKHAĬLOVICH. 1907- . Luoravetlany (Chukchi). (Sovetskoe kraevedenie, June 1936, no. 6, p. 29-40, 7 illus.) Text in Russian. *Title tr.:* The Chukchis.

The two branches of this people are noted: (1) the settled fishers, about 3,500 in number, living along the coast of the Chukotsk Peninsula from Mys Ėrri to Mys Dezhneva (East Cape) and along the Bering Sea coast down to the Anadyrskiy Liman; (2) the reindeer Chukchis (about 12,000) nomadizing in the interior, on the Indigirka, Alazeya, the Kolyma and its tributaries, etc. First encountering the Russians in 1642, the Chukchis were never completely subjugated during the Tsarist régime, they paid their *tasok* on a voluntary basis as gifts. The Russian and American merchants had more success with them than did the military and missionaries. The Chukchi economy is described. Their little known social organization is discussed, also their family life and wedding customs (supposed relics of "group marriage"), their former religion, feasts and shamanism, relics of a matriarchal order, etc. The results of the first *pätiletkä* (five-year plan) are briefly

outlined: the establishment of two cultural bases, eight mobile schools, etc.

Copy seen: DLC.

38392. ZOLOTAREV, ALEKSANDR MIKHAĬLOVICH. 1907- . Perezhitki totemizma u narodov Sibiri. Leningrad. Izd-vo Instituta narodov Severa, 1934. 52 p. About 100 refs. Text in Russian. *Title tr.:* Survivals of totemism among the peoples of Siberia.

An attempt is made to prove that totemism was once well known among Siberian natives. After a general discussion on its origin and various theories explaining it, the author traces alleged totemistic relics in the customs, beliefs, rites (e. g. bear festivals), taboos, legends and tales, tribal names, etc., of various Siberian peoples, in literature. He claims to have evidence of its existence among the Gilyaks, Ainu, Tungus and Yakuts (very strong), Yukaghirs, Samoyeds, Yeniseians, Ostyaks, Kamchadals, Koryaks, Chukchis and Eskimos (Asiatic and Alaskan). In the taiga, the most common totemic animal is the bear, and on the Arctic Ocean the whale; others are the seal, eagle, swallow, tiger and wolf. Totemism is an ideology typical of a primitive tribal order; it is considered to be closely connected with the matriarchal order, remnants of which are also traced among these same Siberian peoples.

38393. ZOLOTAREV, ALEKSANDR MIKHAĬLOVICH. 1907- , and G. F. DEBETS. Proiskhozhdenie amerikanskogo cheloveka. (Antropologicheskii zhurnal, 1936, no. 1, p. 103-110) 24 refs. Text in Russian. *Title tr.:* The origin of the American man.

Review article on *The American aborigines*, 1933, edited by D. Jenness (*Arctic Bibliography*, No. 8021). The papers in this volume are summarized and critical remarks given in footnotes. G. Debets does not agree that the American race originated from a mixture of several different races; the Mongoloid type could have developed in America from the earlier Australoid-Europoid "wave" of immigrants (p. 106). That the first immigrants in Alaska were apparently of much higher culture than the first inhabitants of South America is stressed; either a cultural degradation took place, or the prehistoric culture of Alaska does not show the first human activity on this continent (p. 107). I. A. Marr's

work is mentioned, calling attention to presumably similar words in the Terra del Fuego Indian and Caucasian languages.

Copy seen: DSI.

38394. ZOLOTAREV, ALEKSANDR MIKHAILOVICH, 1907- . Rodovol stroi i religii ul'chek. Khabarovsk, Dal'giz, 1939. 206 p., 23 illus., tables, 127 refs. Text in Russian. **Title tr.:** Tribal organization and religion of the Ul'chi.

Monograph on this small Tungusian people (about 700-800 individuals in 1926), living on the right bank of the lower Amur between the village of Kargi and Bogorodskoye, their territory ending about 225 km. from the river mouth. Based on material collected by the author on two expeditions in 1934 and 1936 under the auspices of the State Academy of the History of Material Culture in Moscow. Literature on the Ul'chi is also explored and a critical evaluation of printed sources is given (p. 3-5). Following an introductory historical sketch of this people with discussion of their origin and names (Ul'chi means "fisher people"); their ancient tribal organization, wedding rules and names of kinship, tribal court, cults, bear festivals, burial customs, folklore are investigated in turn. An Ul'chi ethnographic vocabulary is added. Ul'chi religion and rituals are greatly influenced by the Gilyaks and Golds, and Ul'chi folklore includes typical features of Chinese and Mongolian traditions. Everything which might be interpreted as pointing to "primitive communism" or "group marriage" is strongly emphasized.

38399. ZUBOV, NIKOLAI NIKOLAEVICH, 1885- . Gavriil Andreevich Sarychev. (*In*: Lupach, V. S. Russkie moreplavatel, 1953, p. 125-36, illus.) Text in Russian.

Contains a biographical sketch of G. A. Sarychev (1763-1831), an admiral, geographer, hydrographer, arctic explorer and writer. He took part in the "North-eastern secret geographical and astronomical expedition" of J. Billings in 1785-93. In the course of it, he surveyed the Siberian coast to the east of the Kolyma River, made archeological excavations near Cape Bolshoy Baranov, and when the expedition moved in 1789 to the Sea of Okhotsk, he mapped the western coast of that sea, made trips to Kamchatka, and in 1790-93, explored Unalaska, Kayak, St. Lawrence and some islands of the Aleutian group. He is the author of several scientific works (listed by Magidovich on p. 553 of Lupach's work) of which his two on Northeastern Expedition are the most important. They are described in the present volume of *Arctic Bibliography*.

38401. ZUBOV, NIKOLAI NIKOLAEVICH, 1885- . Nauchnye rezultaty drefa "Sedova". (*Nauka i zhizn'*, 1940, no. 2, p. 1-5, 2 text maps) Text in Russian. **Title tr.:** Scientific results of the drift of the *Sedov*.

Account of observations made during the 812-day drift of the ice-breaker *Sedov*, Oct. 23, 1937-Jan. 13, 1940.

938

Its course several times crossed that of the *Fram*'s drift in 1893-1896; simultaneous drifts of the Soviet North Pole drifting station (north and east of Greenland) and the ice-breaker *Lenin* (in the Laptevskh Sea) both 1937-1938 afforded the opportunity of comparing the drift of ice fields in a large area of the Arctic Basin over a considerable length of time. The *Sedov* observations discovered a depth exceeding 5,000 m. (at 86°26' N. 39°25' E.) and confirmed those of the *Fram* expedition that a layer of warm, saline Atlantic water lies below the cold surface water of lower salinity. A comparison of air and sea-water temperatures and of ice thickness as observed by the *Fram* and the *Sedov* expeditions gives evidence of the warming up of the Arctic. This recent study of winds, atmospheric pressure and drift of ice fields has supplemented the laws of their relationship established by Nansen, with two additional laws: (1) the drift of ice follows the isobars; (2) the drift of ice takes place at a speed proportional to the gradient of atmospheric pressure. The course of drifts in arctic seas and the central Arctic Basin (actual and theoretical) is shown on sketch maps. An English version of this article is *Arctic Bibliography*, No. 19973.

Used as main index heading

-
- The map displays the North Pacific Ocean, bordered by the Soviet Union to the north and east, Japan to the west, and the United States to the south. Key geographical features include the Sea of Japan, Yellow Sea, Korean Peninsula, Sakhalin Island, Kuril Islands, Kamchatka Peninsula, Aleutian Islands, and the Bering Sea. Major cities such as Moscow, Leningrad, Khabarovsk, Vladivostok, Harbin, Mukden, Peking, Chita, Irkutsk, Yakutsk, Ulan-Ude, Novosibirsk, Krasnoyarsk, Novokuznetsk, Kemerovo, and Khabarovsk are marked. The map also shows the Japanese archipelago, including Hokkaido, Honshu, Shikoku, and Kyushu. The Bering Sea is labeled with numbers 1 through 14. The map includes a coordinate grid with latitude and longitude lines. A note at the bottom states: "The Government of the United States has not recognized the incorporation of Estonia, Latvia, and Lithuania into the Soviet Union; nor does it recognize as final the de facto western limit of Polish Administration in Germany (the Oder-Neisse Line); some other effective boundaries do not necessarily correspond to the boundaries recognized by the United States Government."
